Pebdeh Cave dated to 42 000 36 000 years ago suggest its role as a hunting station The unique lithic assemblage blending MP and UP traits provides insights into transitional phases in the Zagros Compared broadly Pebdeh s tools align with IUP definitions displaying elongated points and volumetric blade production Bayesian modeling places Pebdeh within a period of rapid technological evolution 44 000 38 000 years ago This research positions Iran as essential for understanding hominin dispersals and evolution Challenges like limited stratified sites sparse chronological data and geopolitical restrictions underscore the need for interdisciplinary approaches to unlock Iran s archaeological potential This thesis advances knowledge on hominin history in Western Asia revealing migration adaptation and ecological context in early hominin evolution
