Lipps,Philip W. Signor,2013-11-21 Several years ago we realized that the most prominent ideas that had been ex pressed about the origin and early evolution of the Metazoa seemed to have been developed chiefly by zoologists using evidence from modern species without reference to the fossil record Paleontologists had in fact put forth their own ideas but the zoological and the paleontological evidence were about the problem seldom considered together especially by zoologists We believed that the paleontological documentation of the first Metazoa was too scattered too obscure to Western readers and much of it too recent to have been readily available to our colleagues in zoology Whether or not that was entirely true we thought that a single volume reviewing the fossil record of the earliest Metazoa would be useful to many in both paleontology and zoology especially since so much new information has been developed in the last few years Some of this information has been summarized in general articles recently but an overview of most of the field does not exist We therefore organized this book in five parts so that the evidence could be placed in perspective and summarized and inferences made from it Part I introduces the previous hypotheses that have been proposed for the origin and early radiation of Metazoa Part II consists of two summary chapters that set the sedimentological geochemical and biological background to the known radiations of Metazoa **Early Life on Earth** Stefan Bengtson,1994 This study is organized around three themes the origin and early

diversification of life during the Archean Eon the maturation of life and the Earth during the long Proterozoic Eon and the explosive diversification of multicellular life that marks the dawn of the Phanerozoic Eon The contributors discuss the coherence of history the combinatorial generation of taxonomic diversity early Metazoan evolution and the Cambrian explosion *Abstracts of North American Geology* ,1971 **Volcanism and Plutonism of Western North America** ,1989 **Current Research and Development in Scientific Documentation** National Science Foundation (U.S.). Office of Scientific Information, Calcareous Algae and Stromatolites Robert Riding,2012-12-06 This volume provides a comprehensive overview of calcareous algae and stromatolites It contains reviews by leading specialists of major groups together with accounts of floras through time It deals with marine and non marine benthic and planktic and modern as well as ancient examples As the first multi authored review of the field ever published in English it is an essential reference text for this complex field It is designed for both postgraduate researchers and professional scientists who require up to date and authoritative information on these long ranging organisms and fabrics which are of wide evolutionary environmental and sedimentary significance
