## **Paleobase Macrofossils 1:**

*PaleoBase* Norman Macleod, 2003-08-15 *PaleoBase* is a new initiative in the presentation of systematic information on fossil organisms. It represents the marriage of up to date systematic information on a collection of over 1500 fossil genera, state of the art color digital photographs of representative specimens from The Natural History Museum's unrivaled paleontological collections and modern relational database technology. With *PaleoBase* an important new tool for the teaching of life history in a wide variety of advanced secondary undergraduate and graduate courses e.g. paleontology, historical geology, stratigraphy, paleoceanography, paleobiogeography becomes available to students and educators alike. *PaleoBase Macrofossils* is the first product from the *PaleoBase* project and will be released in three Parts. It will consist of approximately 1000 generic records drawn from the major invertebrate groups. The genera have been carefully selected to include taxa used in the teaching of paleontology and historical geology worldwide. Together they represent the ideal fossil collection one that in practice only the largest natural history museums could hope to assemble. *PaleoBase Macrofossils* gives educators, students and researchers access to a virtual collection of these fossils, many of which are actual figured specimens from the 19th and 20th century technical publications that served to originally establish the concepts of these genera. For an online demonstration and guided tour of *PaleoBase Macrofossils* please visit [www.paleobase.com](http://www.paleobase.com). For an information brochure or for any queries please e-mail [paleobase.support@oxon.blackwellpublishing.com](mailto:paleobase.support@oxon.blackwellpublishing.com). Versions for Mac and PC, single user and site licence. High quality digital images of representative specimens in full color that can be magnified to reveal additional morphological detail. Complete systematic descriptions incorporating the latest information and written by experts from The Natural History Museum's Department of Palaeontology. A morphological key for each group that can be used to study morphological character distributions or aid in the identification of unknown specimens from local collections. A complete classification for each genus. Descriptions of the genus, geographical and paleogeographical distribution. A summary of each genus, chronostratigraphical distribution. Identification of each genus, original shell mineralogy. A complete glossary of all morphological terms used in the genus descriptions. A complete bibliography that connects the information provided by *Macrofossils* to the larger technical literature. **Biodiversity Databases** Gordon B. Curry, Chris J. Humphries, 2016-04-19

With changes in technology and a renewed effort to catalog the world's biodiversity, huge amounts of data are being generated on biodiversity issues. As response to the call for better information systems to manage the biodiversity crisis, a wide range of solutions are being developed for inventorying, managing and disseminating taxonomic data. This book brings together a diverse array of authors, expertise and assessors that discuss technical developments to improve the construction, population and dissemination of biodiversity information. It is designed to inform students and researchers of biodiversity about the changes and challenges that need to be understood by everyone in this information age. *Invertebrate Palaeontology and Evolution* E. foremost palaeontology text at the undergraduate level This fully revised fourth edition includes a complete update of these sections on evolution and the fossil record and the evolution of the early metazoans New work on the classification of the major phyla in particular brachiopods and molluscs has been incorporated The section on trace fossils is extensively rewritten The author has taken care to involve specialists in the major groups to ensure the taxonomy is as up to date and accurate as possible
