Paleoclimate, Paleomagnetism, and Continental Drift J. K. A. Habicht, 1984 *Paleoclimate, Paleomagnetism, and Continental Drift* J. K. A. Habicht, 1979 Library has 2 copies *The Architecture of Geodynamics* Carroll L. Hoyt, 2002 *Geomorphology of Desert Environments* A. D. Abrahams, A. Parsons, 2013-04-17 Over the last twenty years there has been a major expansion of knowledge in the field of landforms and landforming processes of deserts This advanced level book provides a benchmark for the current state of science and is written by an international team of authors who are acknowledged experts in their fields **Carbonate Sequence Stratigraphy** Robert G. Loucks, J. Frederick Sarg, 1983-04-15 Hardcover plus Foldouts **Cretaceous Project 200, Volume 1: The Cretaceous World** M.B. Hart, S.J. Batenburg, B.T. Huber, G.D. Price, N. Thibault, M. Wagreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d Omalius d Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers that demonstrate these particularly Cretaceous events of warm climates sea level change and the impact of major volcanic events on the fauna and flora of the time Geochemical and stable isotope data are used to interpret these changing environments and their impact on the Cretaceous ecosystem The volume closes with a description of the recent drilling of the Chicxulub bolide impact site *Evolution De La Biosphere Et E* Francis Lethiers, 2021-09-09 The evolution of the living world has not been straightforward process over geological time On the contrary it shows episodes of crises separating phases of evolving radiation This work presenting an assessment of the paleontological discoveries of the last fifteen years could be summed up by the formula the evolution of life on our planet or biodiversity This book which combines clarity of presentation with scientific rigor will be of interest to biologists and geologists as well as teachers students and all those wishing to extend their knowledge on the subject **The Nile Basin** Martin Williams, 2019-01-03 The Nile Basin contains a record of human activities spanning the last million years However the interactions between prehistoric humans and environmental changes in this area are complex and often poorly understood This comprehensive book explains in clear non technical terms how prehistoric environments can be reconstructed with examples drawn from every part of the Nile Basin Adopting a source to sink approach the book integrates events in the Nile headwaters with the record from marine sediment cores in the Nile Delta and offshore It provides a detailed record of past environmental changes throughout the Nile Basin and concludes with a review of the causes and consequences of plant and animal domestication in this region and of the various prehistoric migrations out of Africa into Eurasia and beyond A comprehensive overview this book is ideal for researchers in geomorphology climatology and archaeology **Climate Change in Deserts** Martin Williams, 2014-08-11 Reconstructing climatic changes in deserts and their margins at a variety of

scales in space and time this book draws upon evidence from land and sea including desert dunes wind blown dust river and lake sediments glacial moraines plant and animal fossils isotope geochemistry speleothems soils and prehistoric archaeology The book summarises the Cenozoic evolution of the major deserts of the Americas Eurasia Africa and Australia and the causes of historic floods and droughts The book then considers the causes and consequences of desertification and proposes four key conditions for achieving ecologically sustainable use of natural resources in arid and semi arid areas Climate Change in Deserts is an invaluable reference for researchers and advanced students interested in the climate and geomorphology of deserts geographers geologists ecologists archaeologists soil scientists hydrologists climatologists and natural resource managers *Oklahoma Geology Notes*, 1980 **When the Sahara Was Green** Martin

Williams, 2023-11-07 The little known history of how the Sahara was transformed from a green and fertile land into the largest hot desert in the world The Sahara is the largest hot desert in the world equal in size to China or the United States Yet this arid expanse was once a verdant pleasant land fed by rivers and lakes The Sahara sustained abundant plant and animal life such as Nile perch turtles crocodiles and hippos and attracted prehistoric hunters and herders What transformed this land of lakes into a sea of sands When the Sahara Was Green describes the remarkable history of Earth's greatest desert including why its climate changed the impact this had on human populations and how scientists uncovered the evidence for these extraordinary events From the Sahara's origins as savanna woodland and grassland to its current arid incarnation Martin Williams takes us on a vivid journey through time He describes how the desert's ancient rocks were first fashioned how dinosaurs roamed freely across the land and how it was later covered in tall trees Along the way Williams addresses many questions Why was the Sahara previously much wetter and will it be so again Did humans contribute to its desertification What was the impact of extreme climatic episodes such as prolonged droughts upon the Sahara's geology ecology and inhabitants Williams also shows how plants animals and humans have adapted to the Sahara and what lessons we might learn for living in harmony with the harshest driest conditions in an ever changing global environment A valuable look at how an iconic region has changed over millions of years When the Sahara Was Green reveals the desert's surprising past to reflect on its present as well as its possible future **Marine Clastic Reservoirs** E.G. Rhodes, T.F.

Moslow, 2012-12-06 An integrated perspective to sandstone reservoir description and analysis The twelve chapters divided in 3 sections describe the use of sequence stratigraphy to catalog identify and predict marine clastic reservoir facies examine importance of rigorous sedimentological and geomorphic description and review marine depositional environments

Studies in Continental Margin Geology Joel S. Watkins, Charles L. Drake, American Association of Petroleum Geologists, 1983 **Advances in Geophysics** H. E. Landsberg, Barry Saltzman, 1984 ADVANCES IN GEOPHYSICS VOLUME 26 **Initial Core Descriptions** Scripps Institution of Oceanography, **Regional Stratigraphy of North America** W.J. Frazier, D.R. Schwimmer, 2013-11-11 An early reviewer of this book stated that he had difficulty assessing its marketability

because it falls between the cracks of geological literature We have designed this book to meet a need of modern geology namely a single source providing both detailed and synoptic stratigraphy of the various regions of North America through geological time Shortly after beginning work on such a book we realized why it had not yet been written it required six years of effort assimilation of an incredible amount of information and two years additional work to cut the volume down to publishable size Further by the time the final chapter was written the first few were already out of date Nevertheless the book lies in front of you It is intended to serve several purposes As a textbook it will serve the following courses Regional stratigraphy Sedimentary tectonics Regional tectonics Advanced historical geology Survey level paleontology Obviously not all portions of the book are relevant to all of the above courses We assume the reader will retain this book after the particular course is done and will use it as a reference book Hopefully others will obtain the book solely for reference purposes We believe it will be especially useful for the working geologist or academic geologist seeking generalized and some moderately detailed information about a region or geological time interval which is unfamiliar *Geomorphology of Desert*

Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology *Sedimentology, Conodont Distribution, and Carbonate Diagenesis of the Upper Morgan Formation (Middle Pennsylvanian), Northern Utah and Colorado* Steven George Driese, 1982 *Sedimentology of Selected Mesozoic Clastic Sequences* J. R. McLean, G. E. Reinson, 1983 *Paleozoic Systems of the Rocky Mountain Region* Mark W. Longman, Mark D. Sonnenfeld, 1996
