## **Philosophy The Human Sciences:**

Philosophy and the Human Sciences Charles Taylor, 1985      The Formation of the Historical World in the Human Sciences Wilhelm Dilthey, 2002 This volume provides Dilthey's most mature and best formulation of his Critique of Historical Reason. It begins with three Studies Toward the Foundation of the Human Sciences in which Dilthey refashions Husserlian concepts to describe the basic structures of consciousness relevant to historical understanding. The volume next presents the major 1910 work *The Formation of the Historical World in the Human Sciences*. Here Dilthey considers the degree to which carriers of history—individuals, cultures, institutions, and communities—can be articulated as productive systems capable of generating value and meaning and of realizing purposes. Hegel's idea of objective spirit is reconceived in a more empirical form to designate the medium of commonality in which historical beings are immersed. Any universal claims about history need to be framed within the specific productive systems analyzed by the various human sciences. Dilthey's drafts for the *Continuation of the Formation* contain extensive discussions of the categories most important for our knowledge of historical life: meaning, value, purpose, time, and development. He also examines the contributions of autobiography to historical understanding and of biography to scientific history. The finest summary of Dilthey's views on hermeneutics can be found in *The Understanding of Other Persons and Their Manifestations of Life*. Here Dilthey differentiates understanding relative to three kinds of manifestations of life. After giving his analysis of elementary understanding, he examines the role of induction in higher understanding and interpretation and the relevance of transposition and re-experiencing for grasping individuality.

Popper and the Human Sciences G. Currie, A. Musgrave, 2012-12-06 Although Sir Karl Popper's contributions to a number of diverse areas of philosophy are widely appreciated, serious criticism of his work has tended to focus on his philosophy of the natural sciences. This volume contains twelve critical essays on Popper's contribution to what we have called the human sciences—a category broad enough to include not only Popper's views on the methods of the social sciences but also his views on the relation of mind and body, Freud's psychology, and the status of cultural objects. Most of our contributors are philosophers whose own work stands outside the Popperian framework. We hope that this has resulted in a volume whose essays confront not merely the details of Popper's arguments but also the very presuppositions of his thinking. With one exception, the essays appear here for the first time. The exception is L. J. Cohen's paper, which is a revised and considerably expanded version of a paper first published in the *British Journal for the Philosophy of Science* for June 1980. We would like to thank Loraine Hawkins and Jane Hogg for their editorial assistance and June O'Donnell for typing various manuscripts and all the correspondence which a volume of essays entails.

**The Human Sciences Et Philosophy**, 1969      **The Point of Philosophy** Ludo Abicht, Hendrik Opdebeeck, 2016 The core questions of philosophy about the origin of the world and people, the distinction between good and evil, and the meaning of life: philosophy is the necessary condition for finding answers in a rational manner to the demands for insight, outlook, and the search for meaning.

Robert John Anderson, J. A. Hughes, Wes W. Sharrock, 1986-01-01      **Preserving the Person** C. Stephen Evans, 1994-11 The human quest for self understanding is ancient It transcends the boundaries between ordinary folk and philosophers and it overlaps with many academic disciplines including psychology sociology philosophy and theology Actually the quest is not essentially academic it is a human quest pursued by persons in every age With this in mind philosopher C Stephen Evans takes a look at the human sciences and their contribution to this self understanding Evans first presents a basic problem in these sciences today the attack on the concept of personhood He reviews the contemporary understanding of mind and brain Is a person only a thinking machine or a programmed organism Then he evaluates the impact of Auguste Comte Sigmund Freud J B Watson B F Skinner and Emile Durkheim on what Evans terms      Hermeneutics and the Human Sciences Paul Ricoeur, 2016-08-26 Collected and translated by John B Thompson this collection of essays by Paul Ricoeur includes many that had never appeared in English before the volume's publication in 1981 As comprehensive as it is illuminating this lucid introduction to Ricoeur's prolific contributions to sociological theory features his more recent writings on the history of hermeneutics its central themes and issues his own constructive position and its implications for sociology psychoanalysis and history Presented in a fresh twenty first century series livery and including a specially commissioned preface written by Charles Taylor illuminating its enduring importance and relevance to philosophical enquiry this classic work has been revived for a new generation of readers      **Being Human** Roger Smith, 2007-09-11 Challenging commonly held biological religious and ethical beliefs internationally well known historian of science Roger Smith boldly argues that human nature is not some thing awaiting discovery but is active in understanding itself According to Smith being human is a self creation made possible through a reflective circle of thought and action with a past and a future and studying this history from a range of perspectives is fundamental to human self understanding Smith's argument brings together historical and contemporary debates concerning materialism and human nature and the relations of the different fields of knowledge He draws on classic writings from across the human sciences touching on sociology anthropology brain sciences history philosophical hermeneutics and critical theory and demonstrates that there is no position outside history for an absolutely objective or eternally valid view of human nature The question what is human does not have and could not possibly have one answer Instead there exists a variety of answers for different purposes and there are good reasons for the many conceptions of what it is to be human Smith does not treat human nature as only biological economic or moral but as a multidimensional subject that should be considered in its proper historical context By understanding this context Smith believes we can come to a truer understanding of ourselves Persuasively and elegantly written **Being Human** takes an important new turn in the philosophical study of being human      The Crisis of the Human Sciences Thorsten Botz-Bornstein, 2011-09-22 Centralization and over professionalization can lead to the disappearance of a critical environment capable of linking the human sciences to the real world The authors of this volume suggest that the humanities need to operate in a concrete cultural environment

able to influence procedures on a hic et nunc basis and that they should not entirely depend on normative criteria whose function is often to hide ignorance behind a pretentious veil of value neutral objectivity In sociology the growth of scientism has fragmented ethical categories and distorted discourse between our inner and outer selves while philosophy is suffering from an empty professionalism current in many philosophy departments in industrialized and developing countries where boring ahistorical and nonpolitical exercises are justified through appeals to false excellence In all branches of the humanities absurd evaluation processes foster similar tendencies as they create a sterile atmosphere and prevent interdisciplinarity and creativity Technicization of theory plays into the hands of technocrats The authors offer a broad range of approaches and interpretations reaching from philosophy of education to the re evaluation of business models for universities

**Explanation and Understanding in the Human Sciences** Gurpreet Mahajan, 1992 Social scientists explain events by identifying reasons and causes Occasionally they weave a series of occurrences into a historical narrative What is entailed in each kind of explanation What are the philosophical assumptions that inform them Which form of explanation is adequate for the human sciences Does the hermeneutic method offer a viable alternative to the causal and narrative forms Is hermeneutic understanding significantly different from an explanation in terms of reasons This book addresses such questions which have dominated debates in the philosophy of social science and provides a lucid treatment of issues concerning the adequacy of different forms of explanation In her analysis the author distances herself from those who refer to the distinction between the natural sciences and the social sciences either to discredit or to privilege a particular method for the study of social phenomena Instead she argues that social reality can be conceived in different ways and that different forms of inquiry e g hermeneutic understanding narrative reason action and causal explanation represent various ways in which we think about and interrogate that reality Each of these illuminate a specific dimension of reality and serve different cognitive interests While acknowledging the significance of various modes of explanation and understanding for the human sciences the author maintains that the significance of the hermeneutic mode lies in its distinctive conception of social reality history and knowledge This conception must inform all analysis of social and historical phenomena To the extent that narrative can be creatively informed by hermeneutic philosophy it can offer adequate explanations of social and historical events

**The Human Sciences & Philosophy** Lucien Goldmann, 1969 *Human Sciences* Jens Hoyrup, 2000-06-08

Offers historical and philosophical arguments for treating the humanities as sciences Piaget Philosophy and the Human Sciences Jean Piaget, 1980

**The Eclectic Legacy** John I. Brooks, 1998 This study offers a new interpretation of the emergence of scientific psychology and sociology in late nineteenth century France Focusing on their relationship with the philosophy taught in the French education system the author shows the profound impact on the individuals most responsible for the introduction of the human sciences into the French university particularly Theodule Ribot Alfred Espinas Pierre Janet and Emile Durkheim Philosophers helped shape the human sciences by their criticisms of conceptual and methodological

problems in the emerging disciplines The human sciences that emerged were less reductionist and more methodologically sound than they would have been without the vigorous debate with philosophy This influence is the eclectic legacy of academic philosophy to the human sciences in France

**The Human Sciences after the Decade of the Brain** Jon Leefmann, Elisabeth Hildt, 2017-02-09 The Human Sciences after the Decade of the Brain brings together exciting new works that address today's key challenges for a mutual interaction between cognitive neuroscience and the social sciences and humanities Taking up the methodological and conceptual problems of choosing a neuroscience approach to disciplines such as philosophy history ethics and education the book deepens discussions on a range of epistemological historical and sociological questions about the neuro turn in the new millennium The book's three sections focus on i epistemological questions posed by neurobiologically informed approaches to philosophy and history ii neuroscience's influence on explanations for social and moral behavior and iii the consequences of the neuro turn in diverse sectors of social life such as science education film and human self understanding This book is an important resource both for students and scholars of cognitive neuroscience and biological psychology interested in the philosophical ethical and societal influences of and on their work as well as for students and scholars from the social sciences and humanities interested in neuroscience Explores the recent influence of neuroscience on the humanities and social sciences and how they respond to these influences Offers in depth analysis of the theoretical and practical influence of a brain centered scientific view in diverse areas of the social sciences including economics education cultural studies and philosophy Investigates contributions of the history of science to scrutinizing current neuroscience based approaches to social and moral behavior

*The Norton History of the Human Sciences* Roger Smith, 1997 Beginning with the Renaissance's rediscovery of Greek psychology political philosophy and ethics author Roger Smith recounts how the human sciences gradually organized themselves around a scientific conception of psychology and how this trend has continued to the present day in a circle of interactions between science and ordinary life influencing and influenced by popular culture Photos drawings

[Hermeneutics and the Human Sciences](#) Paul Ricoeur, 1981-08-31 A collection in translation of essays by Paul Ricoeur

**Philosophy and the Spontaneous Philosophy of the Scientists** Louis Althusser, 2012-01-16 The publication in 1965 of *For Marx* and *Reading Capital* established Louis Althusser as one of the most original and controversial figures in the Western Marxist tradition a thinker whose renewal of Marxism was to enjoy great influence over the next decade Collected here are Althusser's most significant philosophical writings from 1965 to 1978 the majority previously untranslated Intended to contribute in his own words to a left wing critique of Stalinism that would help put some substance back into the revolutionary project here in the West they are the record of a shared history At the same time they chart Althusser's critique of the theoretical system unveiled in his own major works and his developing practice of philosophy as a revolutionary weapon The collection opens with two lucid early articles *Theory Theoretical Practice* and *Theoretical Formation and On*

Theoretical Work The title piece Althusser's celebrated lectures in the Philosophy Course for Scientists is the fullest exploration of his new definition of philosophy as politics in the realm of theory a conception which is further developed in Lenin and Philosophy Is it Simple to be a Marxist in Philosophy provides an invaluable account of Althusser's intellectual development The volume concludes with two little known late pieces The Transformation of Philosophy in which the paradoxical history of Marxist philosophy is investigated and Marxism Today a sober balance sheet of the Marxist tradition Attesting to the unique place which Althusser has occupied in modern intellectual history between a tradition of Marxism which he sought to reconstruct and a post Marxism which has eclipsed its predecessor these texts are indispensable reading
