 are known with more being synthesized regularly Introduces students to heterocyclic chemistry and synthesis with practical

examples of applied methodology Emphasizes natural product and pharmaceutical applications Provides graduate students and researchers in the pharmaceutical and related sciences with a background in the field Includes problem sets with several chapters

New Aspects in Phosphorus Chemistry II Jean-Pierre Majoral, 2002 Strong non ionic bases are highly advantageous as stoichiometric reagents and as catalysts in synthetic organic chemistry owing to side reactions that frequently occur when ionic bases such as LDA or alkali metal alkoxides are employed A second reason that non ionic bases are frequently more useful in these applications is that such bases are often more soluble in less polar organic solvents particularly at low temperatures Thirdly non ionic bases can provide reactive naked or tightly associated deprotonated substrate anions that are stabilized by the relatively large poorly solvated cations formed by the protonated base In such cations extensive positive charge delocalization can occur Prior to our work on pro azaphosphatranes of type 1 Scheme 1 the very strong non ionic bases utilized for organic transformations were largely confined to the nitrogenous bases shown below Scheme 2 Scheme 1 Scheme 2 4 J G Verkade 2 Uses of Strong Nonionic Nitrogen Bases 2 1 Amines One of the earliest strong non ionic bases to make its appearance was Proton Sponge and its derivatives 1 and these systems have been reviewed 2 More recently Proton Sponge has been used in the palladium catalyzed arylation of 2 3 dihydrofuran 3 and it also catalyzes Knoevenagel condensations of substrates possessing activated methylene groups 4 Recently the synthesis of the macrocyclic tetramine below Scheme 3 was reported 5 The encrypted nitrogens are very basic pK_{24}
