Photovoltaic Conversion Of Concentrated Sunlight:

Photovoltaic Conversion of Concentrated Sunlight V. M. Andreev, V. A. Grilikhes, V. D. Rumyantsev, 1997-10-31 This book is a survey of recent achievements in solar concentration techniques for photovoltaic electricity generation. The author draws on Russian research into the subject which has been carried out since even before glasnost. **Concentrator**

Photovoltaics Antonio Luque López, Viacheslav M. Andreev, 2007-08-17 This book gives an overview of all components e.g. cells, concentrators, modules and systems for systems of concentrator photovoltaics. It is an application oriented book. The authors report on significant results related to design technology and applications and they also cover the fundamental physics and market considerations. **Terrestrial Photovoltaic Power Systems with Sunlight Concentration** Charles E. Lenses Design and Performance of Solar Concentrators what are we talking about. It is easy to forget that you dear reader may not be one of those who work in exactly the same field as we do nonimaging optics for the concentration of sunlight. You may be a researcher in some optical science interested in the core subject of this book, the world's first practical design of a nonimaging Fresnel lens concentrator. You may not be too excited about the collection of solar energy but you would want a full description of the optical performance of the lens. Which you will get mostly in terms of nonimaging optics complete with test results and set against the competition of imaging Fresnel lenses and mirror based imaging and nonimaging concentrators. If you are a solar energy professional you are likely to be interested in reading why nonimaging optics and solar energy collection go together so well. They do so because the concentration of solar energy does not demand imaging qualities but instead requires flexible designs of highly uniform flux concentrators coping with solar disk size, solar spectrum and tracking errors. Nonimaging optics has been developed to perfection since its discovery in 1965 in dealing with solar power conversion. Much of this experience is useful in nonimaging optical design in other fields where the markets already are more rewarding than in solar power generation such as optoelectronics. **Inventory of advanced energy**
