

The membership problem in matrix semigroups

Given a finite set of matrices $G = \{M_1, M_2, \dots, M_k\}$ and a matrix M . Determine whether there exists a sequence of matrices $M_{i_1}, M_{i_2}, \dots, M_{i_l}$ from G such that $M_{i_1} \times M_{i_2} \times \dots \times M_{i_l} = M$

In other words, Let S be a given finitely generated semigroup of $n \times n$ matrices from $Z^{n \times n}$ ($Q^{n \times n}$). Determine whether a matrix M belongs to S .

The motrality (membership for the zero matrix) is undecidable for 3x3 matrices. [M.Paterson]

Semigroups Of Matrices:

Semigroups of Matrices Jan Okniński, 1998 This book is concerned with the structure of linear semigroups that is subsemigroups of the multiplicative semigroup $M_n(K)$ of $n \times n$ matrices over a field K or more generally skew linear semigroups if K is allowed to be a division ring and its applications to certain problems on associative algebras semigroups and linear representations It is motivated by several recent developments in the area of linear semigroups and their applications It summarizes the state of knowledge in this area presenting the results for the first time in a unified form The book's point of departure is a structure theorem which allows the use of powerful techniques of linear groups Certain aspects of a combinatorial nature connections with the theory of linear representations and applications to various problems on associative algebras are also discussed

Probability Measures on Semigroups Göran Högnäs, Arunava Mukherjee, 2010-11-02 This second edition presents up to date material on the theory of weak convergence of convolution products of probability measures in semigroups the theory of random walks on semigroups and their applications to products of random matrices In addition this unique work examines the essentials of abstract semigroup theory and its application to concrete semigroups of matrices This substantially revised text includes exercises at various levels at the end of each section and includes the best available proofs on the most important theorems used in a book making it suitable for a one semester course on semigroups In addition it could also be used as a main text or supplementary material for courses focusing on probability on algebraic structures or weak convergence This book is ideally suited to graduate students in mathematics and students in other fields such as engineering and the sciences with an interest in probability Students in statistics using advanced probability will also find this book useful

The Algebraic Theory of Semigroups, Volume I Alfred H. Clifford, G. B. Preston, 1961-12-31 The material in this volume was presented in a second year graduate course at Tulane University during the academic year 1958-1959 The book aims at being largely self contained but it is assumed that the reader has some familiarity with sets mappings groups and

lattices Only in Chapter 5 will more preliminary knowledge be required and even there the classical definitions and theorems on the matrix representations of algebras and groups are summarized

Mathematics across the Iron Curtain

Christopher Hollings, 2014-07-16 The theory of semigroups is a relatively young branch of mathematics with most of the major results having appeared after the Second World War This book describes the evolution of algebraic semigroup theory from its earliest origins to the establishment of a full fledged theory Semigroup theory might be termed Cold War mathematics because of the time during which it developed There were thriving schools on both sides of the Iron Curtain although the two sides were not always able to communicate with each other or even gain access to the other's publications A major theme of this book is the comparison of the approaches to the subject of mathematicians in East and West and the study of the extent to which contact between the two sides was possible

Semigroups E. S.

Lăpuș, 1968 On the Structure of Nonnegative Semigroups of Matrices Peter Williamson, 2009 The results presented here are concerned with questions of decomposability of multiplicative semigroups of matrices with nonnegative entries Chapter 1 covers some preliminary results which become useful in the remainder of the exposition Chapters 2 and 3 constitute an exposition of some recent known results on special semigroups Chapter 2 explores conditions for decomposability of

semigroups in terms of conditions derived from linear functionals and in Chapter 3 we give a complete proof of an extension of the celebrated Perron Frobenius Theorem No originality is claimed for the results in Chapters 2 and 3 In Chapter 4 we present some new results on sufficient conditions for finiteness of semigroups of matrices
