Semiotics And Information Sciences:

Semiotics And Information Sciences Paul Perron,2000-12 Very little has been done to show the explicit connection between the representation and the study of information despite the obvious relation that exists between them The purpose of the conference held at Victoria College at the University of Toronto in October 1998 titled Semiotics and the Information Sciences was precisely to focus attention on this pivotal nexus especially given that we now live in a so called information age where it is becoming increasingly more difficult to distinguish between information itself and its interpretation The invited papers appearing in this volume given by experts in semiotics and the information sciences that were designed to investigate this relation by analysis explication and illustration contain significant implications for studying information in the future

The Semiotics of Information Systems John Mingers,Leslie P. Willcocks,2023-08-29 The central concepts of information meaning embodied cognition and semiotics are hugely relevant to contemporary organisations and personal and social lives However these concepts are not well understood and are frequently under represented misrepresented and their importance seriously underplayed in the study of management This is particularly noticeable in the study of the information systems and digital technologies that underpin so much of business operations personal and social life organisation communication and management today This book seeks to fill the obvious gap It provides detailed understanding of fundamental concepts and develops a useable integrative semiotics framework The framework is grounded in rich social theory and philosophy and as the book demonstrates provides a valuable exploratory and explanatory framework for researchers This takes shape as a 12 step research process that has the general features of most research methodologies but also provides distinctive rich resources for in depth research into semiotically related phenomena It will be of great interest to academics undertaking research in digital technologies and business model innovation as well as scholars of research methodology organisation studies HRM marketing and information systems

Semiotics in Information Systems Engineering Kecheng Liu,2000-05-11 Semiotics the science of signs has long been recognised as an important discipline for understanding information and communications Moreover it has found wide application in other areas of computer science as it offers an effective insight into organisations and the computer systems that support them An organisation may be viewed as a system of information and communication in which human actors with the assistance of information technology are able to process represent store and consume information Computer systems that fit into an organisation and that support and enhance its performance and competitiveness can be better delivered if semiotic principles are understood and applied In this book first published in 2000 semiotic methods are introduced and illustrated through three major case studies which demonstrate how information systems can be developed to meet business requirements and support business objectives It will appeal to academics systems developers and analysts

Organisational Semiotics for Business Informatics Kecheng Liu,Weizi Li,2014-11-20 Drawing meaningful conclusions from organisational data is challenging and theoretical

frameworks can often illuminate information in fresh and useful ways This book is one of the first to demonstrate how organisational semiotics can be applied to business informatics and information systems Semiotics a long established discipline of signs offers a rich philosophical and theoretical foundation for understanding information systems This book demonstrates how applying the framework of semiotics to an organisation can provide insights into its communication needs and as a result enhance the design of its information system The authors demonstrate how organisations collect process represent store and consume information through a complex system which is aligned to support its objectives and enhance performance Organisational Semiotics for Business Informatics clearly introduces the basic principles and describes a set of methods and techniques rooted in organisational semiotics These have been applied to business applications demonstrated through real life case studies This ground breaking book has the potential to transform the theoretical understanding of information systems into the basis of a scientific discipline

Advancing Information Systems Theories, Volume II Leslie P. Willcocks, Nik R. Hassan, Suzanne Rivard, 2023-10-14 Information systems research IS is an exciting multidisciplinary area that links the rapidly changing technology of information or communications and information technology ICT to the business and social environment Lately the discourse surrounding information and systems has leaped into the consciousness of the public in unprecedented ways through the rise of social media the Internet of Things IoT fake news and the weaponization of information to name a few Unfortunately it has been felt that these developments are overtaking the ability of the IS field to address them in part because the field itself lacks its own native theories It is well known that the IS field undertakes its research using theories from its reference disciplines such as management social psychology economics communication and computer science but what this book offers is a clarification and implementation of the discipline s own foundational theory This book is the companion volume to *Advancing Information Systems Theories Volume I* and part of a three part series that aims to advance IS research This volume addresses the products of information systems theories examining design principles information practice principles for robotics and other concepts integral to developing theory The book will be of interest to academics studying information systems Big Data digital business information technology innovation management and digital management

Hart,Shirley Diane Gregor,2007-11-01 This volume contains the papers presented at the third biennial Information Systems Foundations Theory Representation and Reality Workshop held at The Australian National University in Canberra from 27 28

September 2006 The focus of the workshop was as for the others in the series the foundations of Information Systems as an academic discipline The particular emphasis was as in past workshops the adequacy and completeness of theoretical underpinnings and the research methods employed At the same time the practical nature of the applications and phenomena with which the discipline deals were kept firmly in view Accordingly the papers in this volume range from the unashamedly theoretical to their focus Designing for Mutability in Information Systems Artifacts Towards a Unified Theory of Fit Task Technology and Individual to the much more practically oriented An Action Centred Approach to Conceptualising Information Support for Routine Work

Information, Organisation and Technology Kecheng Liu, 2001-01-31 The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organizational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organizational and technical systems This perspective is outlined in the chapter presentations in this work

Reframing Humans in Information Systems Development Hannakaisa Isomäki, Samuli Pekkola, 2010-10-12 Modern society has been transformed by the digital convergence towards a future where technologies embed themselves into the fabric of everyday life This ongoing merging of social and technological infrastructures provides and necessitates new possibilities to renovate past notions models and methods of information systems development that accommodates humans as actors within the infrastructure This shift introduces new possibilities for information systems designers to fulfil more and more everyday functions and to enhance their value and worth to the user Reframing Humans in Information Systems Development aims to reframe the phenomenon of human centered development of information systems by connecting scientific constructs produced within the field of information systems which has recently provided a plethora of multidisciplinary user views without explicitly defining clear constructs that serve the IS field in particular IS researchers practitioners and students would benefit from Reframing Humans in Information Systems Development as the book provides a comprehensive view to various human centered development methods and approaches The representatives of the fields of Human Computer Interaction and Computer Supported Collaborative Work will also find this book an excellent resource A theoretical handbook and collection of practical experiences are included along with critical discussions of the utilization methods in ISD and their implications with some interconnecting commentary viewpoints

Information Systems Roland Traunmüller, 2013-04-18 Information Systems The e Business Challenge Indisputable e Business is shaping the future inspiring a growing range of innovative business models To bring it to the point the Internet has redefined the way electronic business is performed In an electronic supported business all relationships are transformed may it be a seller to buyer relationship or an agency to citizen relationship So for instance in commerce new business models incorporate various activities promoting and communicating company and product information to a global user base accepting orders and payments for goods and services providing ongoing customer support getting feedback and spurring collaboration for a new product development

There are several ways of further differentiating e Business such as sketching some diversions on various levels e Commerce e Government B2C B2B B2G G2C Customer Relationship Management Business Intelligence and so on Further distinctions may follow divergent criteria such as separating in business stages Thus particular problem domains emerge They all state of its own guiding the development of adequate information systems

Introduction to Cybersemiotics: A Transdisciplinary Perspective Carlos Vidales, Søren Brier, 2021-04-14 This book traces the origins and evolution of cybersemiotics beginning with the integration of semiotics into the theoretical framework of cybernetics and information theory The book opens with chapters that situate the roots of cybersemiotics in Peircean semiotics describe the advent of the Information Age and cybernetics and lay out the proposition that notions of system communication self reference information meaning form autopoiesis and self control are of equal topical interest to semiotics and systems theory Subsequent chapters introduce a cybersemiotic viewpoint on the capacity of arts and other practices for knowing This suggests pathways for developing Practice as Research and practice led research and prompts the reader to view this new configuration in cybersemiotic terms Other contributors discuss cultural and perceptual shifts that lead to interaction with hybrid environments such as Alexa The relationship of storytelling and cybersemiotics is covered at chapter length and another chapter describes an individual collectivity dialectics in which the latter Comind constrains the former interactants but the former fuels the latter The concluding chapter begins with the observation that digital technologies have infiltrated every corner of the metropolis homes workplaces and places of leisure to the extent that cities and bodies have transformed into interconnected interfaces The book challenges the reader to participate in a broader discussion of the potential limitations alternatives and criticisms of cybersemiotics

Kecheng Liu,Rodney J. Clarke,Peter Bøgh Andersen,Ronald K. Stamper,2012-12-06 Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies It shares common interests with many other approaches to information and organisations such as computer science computational semiotics organisational engineering and language action perspective The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines The analysis and design of information systems develops methods for solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organisational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organisational and technical systems This perspective is outlined in the chapter presentations of Information Organisation and Technology **Semiotik / Semiotics. 1.
