and the abuse of executive power **The Case for Islamo-Christian Civilization** Richard W. Bulliet, 2004-07-28

Conventional wisdom maintains that the differences between Islam and Christianity are irreconcilable. Pre eminent Middle East scholar Richard W Bulliet disagrees and in this fresh provocative book he looks beneath the rhetoric of hatred and misunderstanding to challenge prevailing and misleading views of Islamic history and a clash of civilizations. These sibling societies begin at the same time go through the same developmental stages and confront the same internal challenges. Yet as Christianity grows rich and powerful and less central to everyday life Islam finds success around the globe but falls behind in wealth and power. Modernization in the nineteenth century brings in secular forces that marginalize religion in political and public life. In the Christian world this simply furthers a process that had already begun. In the Middle East this gives rise to the tyrannical governments that continue to dominate. Bulliet argues that beginning in the 1950s American policymakers misread the Muslim world and instead of focusing on the growing discontent against the unpopular governments saw only a forum for liberal democratic reforms within those governments. By fostering slogans like clash of civilizations and what went wrong Americans to this day continue to misread the Muslim world and to miss the opportunity to focus on common ground for building lasting peace. This book offers a fresh perspective on U S Muslim relations and provides the intellectual

High Court (Kolkata, India). Appellate Side, Edgar Hyde, 1864 **The Greatest Criminal Cases** J. Michael Martinez, 2014-03-28

This fascinating book recounts the compelling stories behind 14 of the most important criminal procedure cases in American legal history. Many constitutional protections that Americans take for granted today the right to exclude illegally obtained evidence the right to government financed counsel and the right to remain silent among others were not part of the original Bill of Rights but were the result of criminal trials and judicial interpretations. The untold stories behind these cases reveal circumstances far more interesting than any legal dossier can evoke. Author J Michael Martinez provides a brief introduction to the drama and intrigue behind 14 leading court cases in American law. This engaging text presents a short summary of high profile legal proceedings from the late 19th century through recent times and includes key landmark cases in which the court established the parameters of probable cause for searches the features of due process and the legality of electronic surveillance. The work offers concise explanations and analysis of the facts as well as the lasting significance of the cases to criminal

Despite their immense war fighting capacity the five most powerful states in the international system have failed to attain their primary political objective in almost 40% of their military operations against weak state and non state targets since

1945 Why are states with tremendous military might so often unable to attain their objectives when they use force against weaker adversaries More broadly under what conditions can states use military force to attain their political objectives and what conditions limit the utility of military force as a policy instrument Can we predict the outcome of a war before the fighting begins Scholars and military leaders have argued that poor military strategy choices domestic political constraints on democratic governments or failure to commit sufficient resources to the war effort can explain why strong states lose small wars In contrast Who Wins by Patricia L Sullivan argues that the key to understanding strategic success in war lies in the nature of the political objectives states pursue through the use of military force Sullivan does not deny the importance of war fighting capacity military strategies or resolve as determinants of war outcomes But she provides both a coherent argument and substantial empirical evidence that the effects of these factors are dependent on the nature of the belligerents political objectives The theory s predictions about the conditions under which states are able to attain their political objectives through the use of military force are tested against the most widely accepted alternative explanations of war outcomes with an abundance of historical data on violent conflicts The results support Sullivan s argument and challenge both existing theories and conventional wisdom about the impact of factors like military strength resolve regime type and war fighting strategies on war outcomes
