Serial Rings:

Serial Rings G. Puninski, 2012-12-06 The main theme in classical ring theory is the structure theory of rings of a particular kind For example no one text book in ring theory could miss the Wedderburn Artin theorem which says that a ring R is semisimple Artinian iff R is isomorphic to a finite direct sum of full matrix rings over skew fields This is an example of a finiteness condition which at least historically has dominated in ring theory If we would like to consider a requirement of a lattice theoretical type other than being Artinian or Noetherian the most natural is uniseriality Here a module M is called uniserial if its lattice of submodules is a chain and a ring R is uniserial if both R and R^e are uniserial modules The class of uniserial rings includes commutative valuation rings and is closed under homomorphic images But it is not closed under direct sums nor with respect to Morita equivalence a matrix ring over a uniserial ring is not uniserial There is a class of rings which is very close to uniserial but closed under the constructions just mentioned serial rings A ring R is called serial if R and R^e is a direct sum necessarily finite of uniserial modules Amongst others this class includes triangular matrix rings over a skew field Also if F is a finite field of characteristic p and G is a finite group with a cyclic normal p Sylow subgroup then the group ring FG is serial

Algebras, Rings and Modules Michiel Hazewinkel, Nadiya Gubarenko, V.V. Kirichenko, 2006-01-18 Associative rings and algebras are very interesting algebraic structures In a strict sense the theory of algebras in particular noncommutative algebras originated from a single example namely the quaternions created by Sir William R Hamilton in 1843 This was the first example of a noncommutative numbers system During the next forty years mathematicians introduced other examples of noncommutative algebras began to bring some order into them and to single out certain types of algebras for special attention Thus low dimensional algebras division algebras and commutative algebras were classified and characterized The first complete results in the structure theory of associative algebras over the real and complex fields were obtained by T Molien E Cartan and G Frobenius Modern ring theory began when J H Wedderburn proved his celebrated classification theorem for finite dimensional semisimple algebras over arbitrary fields Twenty years later E Artin proved a structure theorem for rings satisfying both the ascending and descending chain condition which generalized Wedderburn structure theorem The Wedderburn Artin theorem has since become a cornerstone of noncommutative ring theory The purpose of this book is to introduce the subject of the structure theory of associative rings This book is addressed to a reader who wishes to learn this topic from the beginning to research level We have tried to write a self contained book which is intended to be a modern textbook on the structure theory of associative rings and related structures and will be accessible for independent study

Foundations of Module and Ring Theory Robert Wisbauer, 2018-05-11 This volume provides a comprehensive introduction to module theory and the related part of ring theory including original results as well as the most recent work It is a useful and stimulating study for those new to the subject as well as for researchers and serves as a reference volume Starting from a basic understanding of linear algebra the

theory is presented and accompanied by complete proofs For a module M the smallest Grothendieck category containing it is denoted by $\mathcal{O} M$ and module theory is developed in this category Developing the techniques in $\mathcal{O} M$ is no more complicated than in full module categories and the higher generality yields significant advantages for example module theory may be developed for rings without units and also for non associative rings Numerous exercises are included in this volume to give further insight into the topics covered and to draw attention to related results in the literature

Rings and Things and a Fine Array of Twentieth Century Associative Algebra Carl Clifton Faith, 2004 This book surveys more than 125 years of

aspects of associative algebras especially ring and module theory It is the first to probe so extensively such a wealth of historical development Moreover the author brings the reader up to date in particular through his report on the subject in the second half of the twentieth century Included in the book are certain categorical properties from theorems of Frobenius and Stickelberger on the primary decomposition of finite Abelian formulations of the latter by Krull Goldman and others Maschke's theorem on the representation theory of finite groups over a field and the fundamental theorems of Wedderburn on the structure of finite dimensional algebras Goldie and others A special feature of the book is the in depth study of rings with chain condition on annihilator ideals pioneered by Noether Artin and Jacobson and refined and extended by many later mathematicians Two of the author's prior works *Algebra Rings Modules and Categories I and II* Springer Verlag 1973 are devoted to the development of modern associative algebra and ring and module theory Those bibliography of over 1 600 references and is exhaustively indexed In addition to the mathematical survey the author gives candid and descriptive impressions of the last half of the twentieth century in Part II Snapshots of fellow graduate students at the University of Kentucky and at Purdue Faith discusses his Fulbright Nato Postdoctoral at Heidelberg and at the Institute for Advanced Study IAS at Princeton his year as a visiting scholar at Berkeley and the many acquaintances he met there and in subsequent travels in India Europe and most recently Barcelona Comments on the first edition Researchers in algebra should find it both full references as to the origin and development of the theorem I know of no other work in print which does this as thoroughly and as broadly John O'Neill University of Detroit at Mercy Part II Snapshots of Mathematicians of my age and younger will relish reading Snapshots James A Huckaba University of Missouri Columbia

FPF Ring Theory Carl Faith, Stanley Page, 1984-04-26 This work includes all known theorems on the subject of noncommutative FPF rings

Algebra II Ring Theory Carl Faith, 2012-12-06 **Non-Commutative Ring Theory** Surender K. Jain, Sergio R. Lopez-Permouth, 2006-11-14 The papers of this volume share as a common goal the structure and classification of

noncommutative rings and their modules and deal with topics of current research including localization serial rings perfect endomorphism rings quantum groups Morita contexts generalizations of injectivity and Cartan matrices

Handbook of Algebra M. Hazewinkel, 2000-04-06 *Handbook of Algebra* **Ring Theory 2007** Hidetoshi Marubayashi, 2009 Ring theory has

been developing through the interaction between the investigation of its own algebraic structure and its application to many

areas of mathematics computer science and physics among others This volume consists of a collection of survey articles by invited speakers and original articles refereed by world experts that was presented at the fifth China Japan Korea International Symposium The survey articles provide some ideas of the application as well as an excellent overview of the various areas in ring theory The original articles exhibit new ideas tools and techniques needed for successful research investigation in ring theory and show the trend of current research The articles cover all of the most important areas in ring theory making this volume a useful resource book for researchers in mathematics both beginners and advanced experts

Advances In Ring Theory - Proceedings Of The 4th China-japan-korea International Conference Jianlong Chen,Nanqing Ding,Hidetoshi Marubayashi,2005-08-22 The selected papers in this volume cover all the most important areas of ring theory and module theory such as classical ring theory representation theory the theory of quantum groups the theory of Hopf algebras the theory of Lie algebras and Abelian group theory The review articles written by specialists provide an excellent overview of the various areas of ring and module theory ideal for researchers looking for a new or related field of study Also included are original articles showing the trend of current research

Module Theory Alberto Facchini,2012-02-03 This book presents topics in module theory and ring theory some such as Goldie dimension and semiperfect rings are now considered classical and others more specialized such as dual Goldie dimension semilocal endomorphism rings serial rings and modules
