Liquid Crystals II D.M.P. Mingos, 2003-09-04 The liquid crystalline state may be identified as a distinct and unique state of matter which is characterised by properties which resembles those of both solids and liquids It was first recognised in the middle of the last century through the study of nerve myelin and derivatives of cholesterol The research in the area really gathered momentum however when as a result of the pioneering work of Gray in the early 1970 s organic compounds showing liquid crystalline properties were shown to be suitable to form the basis of display devices in the

electronic products The study of liquid crystals is truly multidisciplinary and has attracted the attention of physicists biologists chemists mathematicians and electronics engineers It is therefore impossible to cover all these aspects fully in two small volumes and therefore it was decided in view of the overall title of the series to concentrate on the structural and bonding aspects of the subject The Chapters presented in these two volumes have been organised to cover the following fundamental aspects of the subject The calculation of the structures of liquid crystals an account of their dynamical properties and a discussion of computer simulations of liquid crystalline phases formed by Gay Berne mesogens The relationships between molecular conformation and packing are analysed in some detail The crystal structures of liquid crystal mesogens and the importance of their X ray scattering properties for characterisational purposes are discussed

Liquid Crystal Dimers Santanu Kumar Pal, Sandeep Kumar, 2017-03-06 Discusses the design principles synthesis and thermal behaviour of all types of LC dimers **New Trends in Lyotropic Liquid Crystals** Ingo Dierking ,Antonio Martins Figueiredo Neto, 2020-11-02 Liquid crystals LCs were discovered more than a century ago and were for a long time treated as a physical curiosity until the development of flat panel screens and display devices caused a revolution in the information display industry and in fact in society There would be no mobile phones without liquid crystals no flat screen TVs or computer monitors no virtual reality just to name a few of the applications that have changed our whole world of vision and perception All of these inventions are based on liquid crystals that are formed through a change in temperature thermotropic LCs However there is another form of liquid crystals described even earlier yet much less talked about the lyotropic liquid crystals that occur through the change of concentration of some molecules in a solvent These are found in abundance in nature making up the cell membranes and are used extensively in the food detergents and cosmetics industries In this collection of articles by experts in their respective research areas we bring together some of the most recent and innovative aspects of lyotropic liquid crystals which we believe will drive future research and set novel trends in this field
