

Healthy food swaps for a lower GI diet

The glycaemic index (GI) tells us how quickly a food raises blood glucose (sugar) levels into your blood stream after eating. The GI consists of a scale that runs from 0 to 100. The lower a food's GI, the slower glucose is released and the less it affects your blood sugar and insulin levels.

For this reason a low GI diet is particularly good if you have type 2 or gestational diabetes.

NB: Not all low GI foods are healthy choices. For example, most chocolates have a low-GI because of their fat content, which slows down the rate at which carbohydrates are absorbed. So, it's best to choose foods that are low in saturated fat, salt and sugar, and high in fibre and wholegrains.

Low GI Diet Shopper's Guide 2014 Jennie Brand-Miller,Kaye Foster-Powell,2013-10-29 Unlock the secrets to long term health with Australia s bestselling LOW GI DIET SHOPPER S GUIDE now updated for 2014 *Glycemic Index Food Guide: the Open Secret Tips to Low GI Foods for a Nutritious Low Glycemic Diet That Can Help You Avoid Hyperglycemia and Diabetes!* Pamela Stevens,2016-06-25 Without doubt we are well aware today of the benefits of Glycemic Index GI which started like a project in 1981 at the University of Toronto where the concept was originally developed and the result called the Glycemic Index and the many impacts it has had on the management of sugar bias conditions Yes this project team was led by Dr David Jenkins but the reasoning behind the development of this concept is to gauge the effect of carbohydrates on the content of glucose in the blood This means that for anybody that is out to regulate his or her blood glucose content owing to hyperglycemia or diabetes the glycemic index is a concept that must be embraced Naturally since diabetes is already hitting the epidemic mark in the United States alone and the rest of the world cannot be said to be totally free the discovery of this concept was a highly welcomed development at that auspicious time And in fact it still is today Besides that the situation was getting even worse since more people are being diagnosed with this seemingly intimidating disease that usually lead to other medical complications like the deadly kidney failure So it was a timely concept as you will see later on it will be wisdom for persons with diabetes to get acquainted with the Glycemic Index so as to be well equipped by knowing the diet plan to stick to and the foods to kick off their present diet plan To start with one thing you will need to know is that the class of food called

carbohydrates typically contains varieties of food groups which produce different types of sugar during metabolic breakdown. As a matter of fact, persons afflicted with diabetes usually find it tough to break down some food items, especially the ones that are having high carbohydrate contents. I mean their system cannot simply handle it. The truth is that with their digestive system working at a slow pace, starches and sugars are absorbed into the blood, resulting into excessive glucose in the blood stream. Therefore, persons suffering from diabetes are seriously admonished to reduce their carbs consumption because of the slowness of their system to digest carbs. Well, I will like you to get your copy of this book to get access to the full details of the way to go about managing your condition. Yes, get the book *Glycemic Index Food Guide: The Open Secret Tips to Low GI Foods for a Nutritious Low Glycemic Diet That Can Help You Avoid Hyperglycemia and Diabetes* [The Low GI Diet Revolution](#) Jennie Brand-Miller, Janette Brand Miller, Kaye Foster-Powell, 2004. The authors of *The New Glucose Revolution* introduce the glycemic index as well as a new smart carb diet for losing weight and keeping it off, all based on sound science and proven experience. Original **Glycemic Diet Cookbook** Aaron Nelson Ph D, 2020-09-04. The low glycemic low GI diet is based on the concept of the glycemic index. GI Studies have shown that the low GI diet may result in weight loss, reduce blood sugar levels, and lower the risk of heart disease and type 2 diabetes. However, the way it ranks foods has been criticized for being unreliable and failing to reflect foods' overall healthiness. The glycemic index (GI) of a food is a measure of how a specific food with carbohydrates causes blood sugar to rise. It is given as a number compared to the effect on your blood sugar of eating either glucose (a type of sugar) or white bread. When you eat a food or beverage containing carbohydrates, your body breaks down the carbs into a type of sugar called glucose. The glucose goes into your bloodstream and causes your blood glucose (blood sugar) levels to rise. Compared to low glycemic foods, high glycemic foods lead to a quicker and greater spike in blood sugar levels. These spikes are considered unhealthy for a few reasons. They raise your average blood glucose levels. They place a higher demand for insulin on your body. They lead to more dramatic dips in blood glucose after the spike, potentially causing hunger, carbohydrate cravings, and weakness. A low GI diet and meal plan can help you avoid the blood sugar roller coaster, but the GI is not on the nutrition label of most foods. Instead, you will probably have to look at a list of the GI of foods. The following are several low glycemic foods. The three GI ratings are: Low 55 or fewer, Medium 56-69, High 70 or more. Foods with a low GI value are the preferred choice. They are slowly digested and absorbed, causing a slower and smaller rise in blood sugar levels. On the other hand, foods with a high GI value should be limited. They are quickly digested and absorbed, resulting in a rapid rise and fall of blood sugar levels. You can use this database to find the GI value and glycemic load described below of common foods. It is important to note that foods are only assigned a GI value if they contain carbs. Hence, foods without carbs won't be found on GI lists. *Glycemic Index Diet For Dummies* Meri Raffetto, 2014-02-03. Get proven results from this safe, effective, and easy-to-follow diet.
