Architecture and Politics in Nigeria Nnamdi Elleh,2016-12-08 In 1975 the Nigerian authorities decided to construct a new postcolonial capital called Abuja and together with several internationally renowned architects these military leaders collaborated to build a city for three million inhabitants Founded five years after the Civil War with Biafra which caused around 1.7 million deaths the city was envisaged as a place where justice would reign and where people from different social religious ethnic and political backgrounds would come together in a peaceful manner and work together to develop their country and its economy These were all laudable goals but they ironically mobilized certain forces from around the country in opposition against the Federal Government of Nigeria The international and modernist style architecture and the fact that the government spent tens of billions of dollars constructing this idealized capital ended up causing more strife and conflict For groups like Boko Haram a Nigerian Al Qaida affiliate organization and other smaller ethnic groups seeking to have a say in how the country s oil wealth is spent Abuja symbolized everything in Nigeria they sought to change By examining the creation of the modernist national public spaces of Abuja within a broader historical and global context this book looks at how the successes and the failures of these spaces have affected the citizens of the country and have in fact radicalized individuals with these spaces being scene of some of the most important political events and terrorist targets including bombings and protest rallies Although focusing on Nigeria s capital the study has a wider global implication in that it draws attention to how postcolonial countries that were formed at the turn of the twentieth century are continuously fragmenting and remade by the emergence of new nation states like South Sudan **Solid States** Michael Bell,Craig Buckley,2010-12 DVD features highlights from the conference held at Columbia University [The Barcelona Pavilion by Mies van der Rohe](#) Dietrich Neumann,2020-12-07 While Mies van der Rohe s pavilion at the International Exposition in Barcelona in 1929 went

unnoticed by most of the visitors to the fairgrounds contemporary critics enthusiastically hailed it as the most convincing statement of the Modern Age This book presents 100 selected texts about this much discussed building written then and now from the opening speech by the Spanish king to newspaper articles and private letters voices of contemporary architects architecture critics and historians and even a text by artist Ai Weiwei who created an installation in the outdoor area of the pavilion in 2010 Thus the history of this building's reception depicts a dazzling picture and inconceivable breadth including statements by such eminent authors as Frank Lloyd Wright Leonardo Benevolo Rem Koolhaas Peter Eisenman The Grove Encyclopedia of American Art Joan M. Marter, 2011 Arranged in alphabetical order these 5 volumes encompass the history of the cultural development of America with over 2300 entries *Encyclopedia of Twentieth Century Architecture* R. Stephen Sennott, 2004 For more information including the introduction a full list of entries and contributors a generous selection of sample pages and more visit the Encyclopedia of 20th Century Architecture website Focusing on architecture from all regions of the world this three volume set profiles the twentieth century's vast chronicle of architectural achievements both within and well beyond the theoretical confines of modernism Unlike existing works this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types movements styles and building practices across traditional geographic and cultural boundaries **Neighborhood** Emily Talen, 2019 In an effort to make neighborhoods compatible with 21st century ideals Talen has produced a singular resource for understanding what is meant by neighborhood a multi dimensional comprehensive view of what neighborhoods signify how they're idealized and measured and what their historical progression has been The Autopoiesis of Architecture, Volume II Patrik Schumacher, 2012-04-24 This is the second part of a major theoretical work by Patrik Schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication Autopoiesis comes from the Greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems This new approach offers architecture an arsenal of general comparative concepts It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse On the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering Schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations Whereas the first volume provides the theoretical groundwork for Schumacher's ideas focusing on architecture as an autopoietic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces It formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society The volume explicitly

addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty Architecture's specific role within contemporary society is explained and its relationship to politics is clarified Finally the new global style of Parametricism is introduced and theoretically grounded

Reflections on Urban, Regional and National Space Uzo Nishiyama, 2017-11-30 Nishiyama Uz educated as an architect between 1930 and 1933 was a key figure in Japanese urban planning He was a prolific writer who influenced a whole generation of Japanese urban planners and his interpretations of foreign planning and local practice still influence Japanese planning theory and practice today Nishiyama's first publications date to the 1930s and his last ones appeared in the 1990s spanning a period of enormous political and spatial changes The three articles translated here originally published in the 1940s in professional magazines show how Nishiyama developed his theoretical models based on a social approach to architecture and planning focusing on land use and land control rather than aesthetic preferences They provide insight into Nishiyama's early thinking his analysis of foreign examples his reflection on large scale regional and national spatial organization and his architectural and urban visions providing a remarkable and fascinating insight into the state of planning in Japan These texts call scholarly attention to the writing of a global planning history and invite the reader to engage with a major figure in planning who is largely unknown outside Japan to reconsider Japanese planning history and to work towards a truly global planning history How does Nishiyama compare to the great urban planners of the past in the West such as Patrick Geddes Lewis Mumford or Werner Hegemann Many more translations will be necessary to answer this question

The Urban Masterplanning Handbook Eric Firley, Katharina Groen, 2014-05-16 A highly illustrated reference tool this handbook provides comparative visual analysis of major urban extensions and masterplans around the world It places an important new emphasis on the processes and structures that influence urban form highlighting the significant impact that public or private landownership management and funding might have on shaping a particular project Each of the book's 20 subjects is rigorously analysed through original diagrams scale drawings and descriptive texts which are complemented by key statistics and colour photography The case studies are presented in order of size rather than date or geographical location This offers design professionals developers and city planners as well as students of architecture and urban design informed organisational and formal comparisons leading to intriguing insights A wide geographical range of contemporary and historic masterplans are featured These encompass European projects from the 19th century to the present day Belgravia in London Sarphatipark in Amsterdam Potsdamer Platz in Berlin La Defense Seine Arche in Paris and Hammarby Sjöstad in Stockholm In North America the postwar development of Stuyvesant Town in Manhattan is also the subject of a case study More recent and ongoing international urban schemes are included such as Puerto Madero in Buenos Aires Downtown Dubai and the New Central Business District in Beijing

Mass-Customised Cities Tom Verebes, 2015-12-21 What happens when computational design and fabrication technologies ramp up to the urban scale

Though these innovative production processes are currently now largely limited to small scale design projects what will happen when they are applied to the vast scale of the 21st century world city Could new technologies enable an important shift away from mass production to increasingly bespoke and custom designed systems The introduction of standardisation and mass production processes in the 20th century saw the industrial city take on a repetitious and homogeneous quality through the duplication of component parts Today non standard bespoke systems hold out the promise of realising a distinctive urbanism characterized by the differentiation of serial production and the variation of simple parts that should lead to a more complex and compelling whole Given the current pace and rate of urbanisation in Asia the mass customization of the city is set to have imminent and far reaching practical consequences for the rest of the developing and developed world

The Routledge Companion to Twentieth and Early Twenty-First Century Urban Design Jon

Lang, 2020-11-09 The Routledge Companion to Twentieth and Early Twenty First Century Urban Design is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and governmental investors self consciously erect buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists

Frankenstein Urbanism Federico Cugurullo, 2021-05-16 This book tells the story of visionary urban experiments shedding light on the theories that preceded their development and on the monsters that followed and might be the end of our cities The narrative is threefold and delves first into the eco city second the smart city and third the autonomous city intended as a place where existing smart technologies are evolving into artificial intelligences that are taking the management of the city out of the hands of humans The book empirically explores Masdar City in Abu Dhabi and Hong Kong to provide a critical analysis of eco and smart city experiments and their sustainability and it draws on numerous real life examples to illustrate the rise of urban artificial intelligences across different geographical spaces and scales Theoretically the book traverses philosophy urban studies and planning theory to explain the passage from eco and smart cities to the autonomous city and to reflect on the meaning and purpose of cities in a time when human and

non biological intelligences are irreversibly colliding in the built environment Iconoclastic and prophetic Frankenstein Urbanism is both an examination of the evolution of urban experimentation through the lens of Mary Shelley s Frankenstein and a warning about an urbanism whose product resembles Frankenstein s monster a fragmented entity which escapes human control and human understanding Academics students and practitioners will find in this book the knowledge that is necessary to comprehend and engage with the many urban experiments that are now alive ready to leave the laboratory and enter our cities
