Lunar Descent:

Lunar Descent Allen Steele, 2015-05-19 The former head of a lunar mining operation returns to the moon and is immediately sucked into a dangerous morass of labor troubles, lies, larceny and corporate wrongdoing in this wildly entertaining science fiction thrill ride. There is big trouble on the moon. The blue collar working stiffs of Descartes Station, who mine the surface for minerals and the North Pole for water, have become increasingly dissatisfied with Skycorp's general disregard for its employees' well-being. Following the most recent spate of layoffs, the labor strike grumblings have only grown louder, so the company is sending former base administrator and recovering alcoholic Lester Riddell back into the fold in an attempt to boost morale and output alike. The truth, however, becomes shockingly apparent to Riddell almost immediately upon his return. Not only has he been unceremoniously dumped into a muddled mess of larceny, piracy and corporate malfeasance, it appears that Skycorp is purposely setting him up to fail, which could spell finis for Descartes Station and every trash-talking, pot-smoking, porn-loving Vacuum Sucker and Moondog who toils there. But as the Skycorp suits are about to discover, they've just made the biggest mistake of their corporate lives because Lester Riddell is nobody's fall guy. Three-time Hugo Award winner Allen Steele has seen the near future, and it isn't pretty: it's noisy, dirty, dangerous and chaotic. Thrilling, wildly inventive, delightfully profane and totally outrageous, *Lunar Descent* is one hell of a rocket ride with a master of science fiction at the helm.

[Human Missions to Mars](#) Donald Rapp, 2023-01-01 In this book, Donald Rapp looks at human missions to Mars from a technological perspective. He divides the mission into a number of stages: Earth's surface to low Earth orbit (LEO), departing from LEO toward Mars, Mars orbit insertion and entry, descent and landing, ascent from Mars, trans-Earth injection from Mars orbit and Earth return. A mission to send humans to explore the surface of Mars has been the ultimate goal of planetary exploration since the 1950s, when von Braun conjectured a flotilla of 10 interplanetary vessels carrying a crew of at least 70 humans. Since then, more than 1,000 studies have been carried out. This third edition provides extensive updating and additions to the last edition, including new sections and many new figures, tables and references.

Lunar Outpost Erik Seedhouse, 2009-04-22 *Lunar Outpost* provides a detailed account of the various technologies, mission architectures, medical requirements and training needed to return humans to the Moon within the next decade. It focuses on the means by which a lunar outpost will be constructed and also addresses major topics such as the cost of the enterprise and the roles played by private companies and individual countries. The return of humans to the surface of the Moon will be critical to the exploration of the solar system. The various missions are not only in pursuit of scientific knowledge but also looking to extend human civilization, economic expansion and public engagement beyond Earth. As well as NASA's China's Project 921, Japan's Aerospace Exploration Agency, Russia and the European Space Agency are all planning manned missions to the Moon and eventually to Mars. The Ares I and Ares V are the biggest rockets since the Saturn V, and there is much state-of-the-art technology incorporated into the design of Orion, the

Science Walter Sierra,2019-10-03 In Space to Stay the third book in the spell binding The Saga of Rocket Science series gives a thorough expos of the U S Apollo and Space Shuttle programs You will be there as Gus Grissom Ed White and Roger Chaffee perish and get incinerated inside their locked Apollo 1 capsule when Jim Lovell Jack Swigert and Fred Haise didn't know if they would make it back alive aboard a freezing lunar module on Apollo 13 as Neil and Buzz experienced the euphoria of being the first humans to land on the Moon while Mike Collins in lunar orbit and an anxious world looked on You'll see the same panoramic vistas of the lunar landscape and the beautiful blue marble we call Earth as the astronauts saw You are taken inside the Challenger Space Shuttle as it caught fire and disintegrated in flight What seven brave astronauts felt like as they plunged to their deaths in a basically intact crew cockpit You'll understand exactly what failed and how it failed on both the Challenger and the ill fated Columbia space shuttles and why another seven astronauts aboard the Columbia felt no pain despite their grisly annihilation during reentry **Pathways to Exploration** National Research Council,Division of Behavioral and Social Sciences and Education,Committee on National Statistics,Division on Engineering and Physical Sciences,Space Studies Board,Aeronautics and Space Engineering Board,Committee on Human Spaceflight,2014-09-30 The United States has publicly funded its human spaceflight program on a continuous basis for more

than a half century through three wars and a half dozen recessions from the early Mercury and Gemini suborbital and Earth orbital missions to the lunar landings and thence to the first reusable winged crewed spaceplane that the United States operated for three decades Today the United States is the major partner in a massive orbital facility the International Space Station that is becoming the focal point for the first tentative steps in commercial cargo and crewed orbital space flights And yet the long term future of human spaceflight beyond this project is unclear Pronouncements by multiple presidents of bold new ventures by Americans to the Moon to Mars and to an asteroid in its native orbit have not been matched by the same commitment that accompanied President Kennedy's now fabled 1961 speech namely the substantial increase in NASA funding needed to make it happen Are we still committed to advancing human spaceflight What should a long term goal be and what does the United States need to do to achieve it Pathways to Exploration explores the case for advancing this endeavor drawing on the history of rationales for human spaceflight examining the attitudes of stakeholders and the public and carefully assessing the technical and fiscal realities This report recommends maintaining the long term focus on Mars as the horizon goal for human space exploration With this goal in mind the report considers funding levels necessary to maintain a robust tempo of execution current research and exploration projects and the time resources needed to continue them and international cooperation that could contribute to the achievement of spaceflight to Mars According to Pathways to Exploration a successful U S program would require sustained national commitment and a budget that increases by more than the rate of inflation In reviving a U S human exploration program capable of answering the enduring questions about humanity's destiny beyond our tiny blue planet the nation will need to grapple with the attitudinal and fiscal realities of the nation today while staying true to a small but crucial set of fundamental principles for the conduct of exploration of the endless frontier The recommendations of Pathways to Exploration provide a clear map toward a human spaceflight program that inspires students and citizens by furthering human exploration and discovery while taking into account the long term commitment necessary to achieve this goal
