Differential Algebraic Groups of Finite Dimension Alexandru Buium, 2006-11-15 Differential algebraic groups were introduced by P Cassidy and E Kolchin and are roughly speaking groups defined by algebraic differential equations in the same way as algebraic groups are groups defined by algebraic equations The aim of the book is two fold 1 the provide an algebraic geometer s introduction to differential algebraic groups and 2 to provide a structure and classification theory for the finite dimensional ones The main idea of the approach is to relate this topic to the study of a deformations of not necessarily linear algebraic groups and b deformations of their automorphisms The reader is assumed to possess some standard knowledge of algebraic geometry but no familiarity with Kolchin s work is necessary The book is both a research monograph and an introduction to a new topic and thus will be of interest to a wide audience ranging from researchers to graduate students

Real Options In Energy And Commodity Markets Nicola Secomandi, 2016-11-28 The field of real

options is concerned with the management and financial valuation of operational flexibility in business endeavors From the very outset energy and commodity markets which play fundamental roles in the worldwide economy have provided a relevant context for real option analysis both in theory and practice This volume is a collection of six chapters covering recent research on real options in energy and commodity markets reflecting the significance of these markets for real option analysis The volume is divided into two parts the first on theory and the second on methods and applications The two chapters in the first part of the book respectively address commodity storage and the concept of convenience yield and how the management of real options can be impacted by the trader's own market decisions in the context of commodity shipping The four chapters in the second part of the book propose and apply real option models in various domains modeling the evolution of futures prices of emission certificates managing copper extraction illustrated with an application to a project at Codelco Chile the largest copper producer in the world the core ideas behind real option analysis in the context of the merchant management of hydrocarbon cracking operations and optimizing the portfolio of contracts that oil refineries use to market their gasoline production Final Report of the Advisory Committee on Weather Control United States. Lill,Wendy Sandoval,2017-08-14 The definitive guide to the myriad analytical techniques available to scientists involved in biotherapeutics research Analytical Characterization of Biotherapeutics covers all current and emerging analytical tools and

techniques used for the characterization of therapeutic proteins and antigen reagents From basic recombinant antigen and antibody characterization to complex analyses for increasingly complex molecular designs the book explores the history of the analysis techniques and offers valuable insights into the most important emerging analytical solutions In addition it frames critical questions warranting attention in the design and delivery of a therapeutic protein exposes analytical challenges that may occur when characterizing these molecules and presents a number of tested solutions The first single volume guide of its kind Analytical Characterization of Biotherapeutics brings together contributions from scientists at the leading edge of biotherapeutics research and manufacturing Key topics covered in depth include the structural characterization of recombinant proteins and antibodies antibody de novo sequencing characterization of antibody drug conjugates characterization of bi specific or other hybrid molecules characterization of manufacturing host cell contaminant proteins analytical tools for biologics molecular assessment and more Each chapter is written by a recognized expert or experts in their field who discuss current and cutting edge approaches to fully characterizing biotherapeutic proteins and antigen reagents Covers the full range of characterization strategies for large molecule based therapeutics Provides an up to date account of the latest approaches used for large molecule characterization Chapters cover the background needed to understand the challenges at hand solutions to characterize these large molecules and a summary of emerging options for analytical characterization Analytical Characterization of Biotherapeutics is an up to date resource for analytical scientists biologists and mass spectrometrists involved in the analysis of biomolecules as well as scientists employed in the pharmaceuticals and biotechnology industries Graduate students in biology and analytical science and their instructors will find it to be fascinating and instructive supplementary reading

Immunity to Malaria and Vaccine Strategies Kevin N. Couper, Julius C. Hafalla, Noah S. Butler, Ashraful Haque, 2019-10-10 Malaria caused by infection with protozoan parasites belonging to the genus Plasmodium is a highly prevalent and lethal infectious disease responsible for 435 000 deaths in 2017 Optimism that malaria was gradually being controlled and eliminated has been tempered by recent evidence that malaria control measures are beginning to stall and that Plasmodium parasites are developing resistance to front line anti malarial drugs An important milestone has been the recent development of a malaria vaccine Mosquirix for use in humans the very first against a parasitic infection Unfortunately this vaccine has modest and short lived efficacy with vaccinated individuals possibly being at increased risk of severe malarial disease when protection wanes Thus to define new ways to combat malaria there remains an urgent requirement to identify the immune mechanisms that promote resistance to malarial disease and to understand why these so often fail The review and primary research articles in this Research Topic illustrate the breadth of research performed worldwide aimed to understand the biology of the Plasmodium parasite the roles of the various cell types that act within the immune response against the parasite and the parasitological and immunological basis of severe malarial disease The articles in section 1 exemplify the different vaccination strategies being developed and tested by the research

community in the fight against malaria The articles in section 2 review important overarching aspects of malaria immunology and the use of models to study human malaria The articles in section 3 describe the ways through which the Plasmodium parasite is initially recognised by the immune system during infection how the parasite can directly impact this critical event to restrict anti Plasmodial immunity and resolve the roles of key innate cell populations such as dendritic cells in coordinating malarial immunity The articles in sections 4 6 outline the roles T and B cell populations play during malaria highlighting the activation diversification and regulation of the crucial cell types during malaria and discuss some of the reasons adaptive immunity to malaria is often considered so poor compared with other diseases The articles in section 7 provide up to date information on the pathogenesis of cerebral malaria bridging our understanding of the syndrome in humans with information learned from animal models Overall the articles in this research many of which are published by leaders in the malaria field emphasize the imagination and technical advances being employed by researchers against malaria We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies IUIS We hereby state publicly that the IUIS has had no editorial input in articles included in this Research Topic thus ensuring that all aspects of this Research Topic are evaluated objectively unbiased by any specific policy or opinion of the IUIS Catalogue of Printed Books ,1885
