

5. Database system apply the normalization of tables to delete redundant data from the tables, to reduce the complexity. Normal forms are a set of rules that help to correct the transformation of entities and relationships to the structure of the physical layout of the tables that is not used in ontologies.
6. A database uses an ER diagram to describe the syntax; this technique is used for abstract and conceptual data representation. In ontology, however, the syntax is written by logic; the most common is the description logic that corresponds to the OWL DL, a language for creating ontologies.
7. Ontologies can be created using existing ontologies while databases are created from scratch like all tables and their content have to design new.
8. But there are certain similarities between ontologies and databases. we can convert a database to an ontology and vice versa using the approach Ontology Inverse Engineering.
