Operator Algebras In Dynamical Systems:

Operator Algebras in Dynamical Systems Shtichirt Sakai, 2014-05-18 This book is essential reading for graduate students and professionals working in operator algebras mathematical physics and functional analysis

Operator Algebras in Dynamical Systems Shōichirō Sakai, 2008-02-04 This book is concerned with the theory of unbounded derivations in C^* algebras a subject whose study was motivated by questions in quantum physics and statistical mechanics and to which the author has made considerable contributions This is an active area of research and one of the most ambitious aims of the theory is to develop quantum statistical mechanics within the framework of C^* theory The presentation concentrates on topics involving quantum statistical mechanics and differentiations on manifolds One of the goals is to formulate the absence theorem of phase transitions in its most general form within the C^* setting For the first time the author globally constructs within that setting derivations for a fairly wide class of interacting models and presents a new axiomatic treatment of the construction of time evolutions and KMS states

Dynamical Entropy in Operator Algebras Sergey Neshveyev, Erling Størmer, 2006-09-22 During the last 30 years there have been several attempts at extending the notion of entropy to noncommutative dynamical systems The authors present in the book the two most successful approaches to the extensions of measure entropy and topological entropy to the noncommutative setting and analyze in detail the main models in the theory The book addresses mathematicians and physicists including graduate students who are interested in quantum dynamical systems and applications of operator algebras and ergodic theory Although the authors assume a basic knowledge of operator algebras they give precise definitions of the notions and in most cases complete proofs of the results which are used

Operator Algebras and Dynamics: Groupoids, Crossed Products, and Rokhlin Dimension Aidan Sims, Gábor Szabó, Dana Williams, 2020-06-22 This book collects the notes of the lectures given at the Advanced Course on Crossed Products Groupoids and Rokhlin dimension that took place at the Centre de Recerca Matemàtica CRM from March 13 to March 17 2017 The notes consist of three series of lectures The first one was given by Dana Williams Dartmouth College and served as an introduction to crossed products of C algebras and the study of their structure The second series of lectures was delivered by Aidan Sims Wollongong who gave an overview of the theory of topological groupoids as a model for groups and group actions and groupoid C algebras with particular emphasis on the case of tale groupoids Finally the last series was delivered by G bor Szab Copenhagen and consisted of an introduction to Rokhlin type properties mostly centered around the work of Hirshberg Winter and Zacharias with hints to the more advanced theory related to groupoids
