Optical Fiber Sensors: Systems and applications John Dakin,B. Culshaw,1989 **Optical Fiber Sensor**

Technology L.S. Grattan,B.T. Meggitt,2013-03-09 Fundamentals of Optical Fiber Sensor Technology The field of optical fiber sensors continues to expand and develop being increasingly influenced by new applications of the technologies that have been the topics of research for some years In this way the subject continues to mature and reach into new areas of engineering This text in the series on Optical Fiber Sensor Technology provides a foundation for a better understanding of those developments in the basic science and its applications in fiber sensors underpinning the subject today This book builds upon the work in an earlier single volume which covered a broad area of the subject but which now in this volume 1 of the series focuses upon the fundamentals and essentials of the technology Material which is included has been carefully reviewed and in most cases thoroughly revised and expanded to reflect the current state of the subject and provide an essential background for the more applications oriented content of the subsequent volumes of the series This volume opens with a status paper on optical fiber sensor technology by Kenneth Grattan and Tong Sun providing in it a flavor of the main topics in the field and giving an essential overview at the sort of systems which are discussed in more detail in the other chapters in the whole series An extensive publication list of readily accessible papers reflecting these topics is included

Optical Fiber Sensor Technology L.S. Grattan,B.T. Meggitt,2013-03-14 Optical Fiber Sensor Technology Advanced Applications Bragg Gratings and Distributed Sensors builds upon the foundations of the subject in the preceding four volumes of this series concentrating as they do upon both applications and the technology of advanced optical fiber sensors Previous volumes have covered the fundamentals of the field devices and systems and chemical and environmental monitoring This volume deals with a range of highly topical sensor devices and commercial systems with considerable emphasis upon one of the most important areas Bragg gratings in fibers their fabrication and applications in advanced sensor systems and the principles and use of distributed fiber optic sensors The volume is well illustrated and referenced pointing to hundreds of key publications accessible in the open literature It draws upon a group of authors with an international reputation for their work in the area carefully edited into a coherent and logical text by the editors based on their considerable experience in the field This book series will provide an invaluable source for researchers engineers and advanced students in the field of optical fibers optoelectronics and measurement and sensing **Optical Fiber Sensor**

Technology L.S. Grattan,B.T. Meggitt,2013-01-21 Systems and Applications in Optical Fiber Sensor Technology The essential technology which underpins developments in optical fiber sensors continues to expand and continues to be driven to a very large extent by advances in optoelectronics which have been produced for the ever expanding optical communications systems and networks of the world The steps forward in the technology often accompanied by a reduction in the price of associated components have been and continue to be adapted for use in a wide variety of optical fiber sensor systems

These include for example the use of photoinduced gratings as fiber sensor components coupled with the wider availability of shorter wavelength lasers bright luminescent sources and high sensitivity detectors which have opened up new possibilities for both novel fiber optic sensor applications and new sensing systems This is to be welcomed at a time when coupled with integrated optic miniaturized devices and detectors real possibilities of systems integration at lower cost and increased utility can be offered The fiber laser and the expansions of the types and availability of the doped fiber on which it is based offer further examples of the integration of the essential components of advanced optical sensor systems fitted for a new range of applications
