Service Experience and Life Management Warren H. Bamford, 1993 **Probabilistic Safety Assessment for Optimum Nuclear Power Plant Life Management (PLiM)** Gennadij V Arkadov, Alexander F Getman, Andrei N Rodionov, 2012-09-27 Probabilistic safety assessment methods are used to calculate nuclear power plant durability and resource lifetime Successful calculation of the reliability and ageing of components is critical for forecasting safety and directing preventative maintenance and Probabilistic safety assessment for optimum nuclear power plant life management provides a comprehensive review of the theory and application of these methods Part one reviews probabilistic methods for predicting the reliability of equipment Following an introduction to key terminology concepts and definitions formal statistical and various physico statistical approaches are discussed Approaches based on the use of defect free models are considered along with those using binomial distribution and models based on the residual defectiveness of structural materials The practical applications of probabilistic methods for strength reliability are subsequently explored in part two Probabilistic methods for increasing the reliability and safety of nuclear power plant components are investigated as are the use of such methods for optimising non destructive tests hydraulic tests technical certification and planned preventative maintenance Finally the book concludes with information on the use of probabilistic methods in ensuring leak tightness of nuclear power plant steam generator heat exchanger pipes With its distinguished authors Probabilistic safety assessment for optimum nuclear power plant life management is a valuable reference for all nuclear plant designers operators nuclear safety engineers and managers as well as academics and researchers in this field Discusses the theory and application of probabilistic safety assessment methods used to calculate nuclear power plant NPP durability and lifetime Reviews probabilistic methods in their application to NPP components and ageing pipelines for the forecasting of NPP resource lifetime and safety Addresses the key areas of probabilistic safety analysis optimization of the operations through in service inspection ISI utilising non destructive testing and maintenance service and repair approaches **Nuclear Corrosion Science and Engineering** Damien Feron, 2012-02-21 Corrosion of nuclear materials i e the interaction between these materials and their environments is a major issue for plant safety as well as for operation and economic competitiveness Understanding these corrosion mechanisms the systems and materials they affect and the methods to accurately measure their incidence is of critical importance to the nuclear industry Combining assessment techniques and analytical models into this understanding allows operators to predict the service life of corrosion affected nuclear plant materials and to apply the most appropriate maintenance and mitigation options to ensure safe long term operation This book critically reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Initial sections introduce the complex field of nuclear corrosion science with detailed chapters on the different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them This is complemented by reviews of monitoring and

control methodologies as well as modelling and lifetime prediction approaches Given that corrosion is an applied science the final sections review corrosion issues across the range of current and next generation nuclear reactors and across such nuclear applications as fuel reprocessing facilities radioactive waste storage and geological disposal systems With its distinguished editor and international team of expert contributors Nuclear corrosion science and engineering is an invaluable reference for nuclear metallurgists materials scientists and engineers as well as nuclear facility operators regulators and consultants and researchers and academics in this field Comprehensively reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Chapters assess different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them Considers monitoring and control methodologies as well as modelling and lifetime prediction approaches
