Sex And Death In Protozoa The History Of Obsession:

Sex and Death in Protozoa Graham Bell, 1988 Is ageing inevitable or can senescence and death be evaded Large animals and plants always age if they live long enough even individual cells from their bodies cannot continue living and dividing indefinitely Whether or not single celled organisms also age and die and what relation sex bore to the process of senescence was the subject of vigorous debate and experimentation early in the last century In this book Dr Bell disinters and reanalyzes these forgotten experiments and argues that protozoan lineages do indeed senesce as the result of an accumulated load of mutations that can be shed only through sexual reproduction This unexpected connection between sex and death is the central theme of a book that will interest all students of evolutionary biology sexuality and senescence

The Biology of Death André Klarsfeld, Frédéric Revah, 2004 Why do we die Do all living creatures share this fate Is the body's slow degradation with the passage of time unavoidable or can the secrets of longevity be unlocked Over the past two decades scientists studying the workings of genes and cells have uncovered some of the clues necessary to solve these mysteries In this fascinating and accessible book two neurobiologists share the often surprising findings from that research including the possibility that aging and natural death may not be forever a certainty for most living beings Andr Klarsfeld and Fr d ric Revah discuss in detail the latest scientific findings and views on death and longevity They challenge many popular assumptions such as the idea that the death of individual organisms serves to rejuvenate species or that death and sexual reproduction are necessarily linked Finally they describe current experimental approaches to postpone natural death in lower organisms as well as in mammals Are all organisms that survive until late in life condemned to a natural death as a consequence of aging even if they live in a well protected supportive environment The variability of the adult life span from a few hours for some insects to more than a millennium for the sequoia and thirteen times that for certain wild berry bushes challenges the notion that death is unavoidable Evolutionary theory helps explain why and how some species have achieved biological mechanisms that seemingly allow them to resist time Death cannot be understood without looking into cells the essential building blocks of life Intriguingly at the level of cells death is not always an accident it is often programmed as an indispensable aspect of life which benefits the organism as a whole

Death & Sex Tyler Volk, Dorion Sagan, 2009-10-13 On DEATH What is shared by spawning Pacific salmon towering trees and suicidal bacteria In his lucid and concise exploration of how and why things die Tyler Volk explains the intriguing ways creatures including ourselves use death to actually enhance life Death is not simply the end of the living though even in that aspect the Grim Reaper has long been essential to natural selection Indeed the exquisite schemes and styles of death that have emerged from evolution have been essential to the great story from life's beginnings in tiny bacteria nearly four thousand million years ago to ancient human rituals surrounding death and continuing to the existential concerns of human culture and consciousness today Volk weaves together autobiography biology Earth history and results of fascinating studies that show how thoughts of our own mortality

affect our everyday lives to prove how an understanding of what some have called the ultimate taboo can enrich the celebration of life and SEX In Sex Dorion Sagan takes a delightful irreverent and informative romp through the science philosophy and literature of humanity's most obsessive subject Have you ever wondered what the anatomy and promiscuous behaviors of chimpanzees and the sexual bullying of gorillas tell us about ourselves Why we lost our hair What amoebas have to do with desire Linking evolutionary biology to salacious readings of the lives and thoughts of such notables as the Marquis de Sade and Simone de Beauvoir and discussing works as varied as *The Story of O* and *Silence of the Lambs* Sex touches on a potpourri of interrelated topics ranging from animal genitalia to sperm competition the difference between nakedness and nudity jealousy's status as an aphrodisiac and the origins of language Casanova and music ovulation and clothes mother in law jokes and alpha females love and loneliness A brief wonderfully entertaining highly literate foray into the origins and evolution of sex Two books in one cover *Death Sex* unravel and answer some of life's most fundamental questions

Sex/Gender Anne Fausto-Sterling, 2012-04-27 Sex Gender presents a relatively new way to think about how biological difference can be produced over time in response to different environmental and social experiences This book gives a clearly written explanation of the biological and cultural underpinnings of gender Anne Fausto Sterling provides an introduction to the biochemistry neurobiology and social construction of gender with expertise and humor in a style accessible to a wide variety of readers In addition to the basics Sex Gender ponders the moral ethical social and political side to this inescapable subject An interview with the author WOMR The Lowdown with Ira Wood Sex an Gender Identity with Anne Fausto Sterling <http://www.publicbroadcasting.net/womr/jukebox/action/viewMedia/mediaId/1025429> **Advances in Microbial Ecology** J.G. Jones, 2013-11-11 Kevin Marshall is a hard act to follow Volume 13 of *Advances in Microbial Ecology* has been produced by a new editorial board and we the members of that board are delighted to have the opportunity to pay tribute to Kevin's achievements In his time as Series Editor the quality of the chapters submitted and the range of subject matter covered have ensured an expanding and more stimulated readership This represents a considerable achievement given the growth in the number of review volumes and the increasing tendency for journals to publish review articles The achievement was reached not only through meticulous attention to quality and detail but also by providing a forum for the expression of views information and results that would stimulate discussion *Advances in Microbial Ecology* will continue to provide such a focus although because of the frequency of publication it would not be practicable to introduce a reply or comment section Although we do not deliberately aim to provide a forum for controversy we encourage speculation based on sound scientific arguments In addition we would like to encourage authors to offer chapters for consideration In the past the volumes have largely comprised invited chapters With the best will in the world an editorial board of four cannot claim adequate coverage of such a vast and rapidly developing research area We would therefore welcome submission of outline plans for chapters which should be sent to the Editor *The Patchwork Human* Peter Luykx, 2022-03-29 Life began about four billion years ago

on our planet Like an old patchwork quilt evolution stitched the human being together from parts of ancient species now long extinct Like any species humans have hundreds or even thousands of traits that have been passed down through time The evolutionary age of our different traits can be told from how widely distributed they are among today's living creatures The book aims to explain some human traits and how we as social sexual language obsessed technological apes evolved into our own modern species Combining hard science with philosophical thought this work aims to explain where humans have come from and where we are going Free of complicated jargon it breaks down the concept of evolution starting with the human body's most basic component our cells Building from there chapters explore which traits became inherited over evolutionary time ultimately projecting what could be next for our species

Evolutionary Biology Ross J. MacIntyre, Michael T. Clegg, 2013-04-17 After volume 33 this book series was replaced by the journal *Evolutionary Biology* Please visit www.springer.com/11692 for further information This volume is the 33rd in this series which includes 32 numbered volumes and an unnumbered supplement Several special volumes have also been published as separate monographs This volume like the others in the series has chapters devoted to a broad spectrum of topics Indeed the editors continue to solicit manuscripts on subjects covered by the encompassing rubric of *Evolutionary Biology* Volume 33 continues the grand tradition of *Evolutionary Biology* in being the most comprehensive series in the field The chapters are always up to date informative and stimulating sometimes infuriating Just what good scientific literature should be Particularly attractive is the free wheeling spirit of the series no style or length is imposed If you want to remain cognizant of contemporary evolutionary advances in general and have time to read only one volume a year outside your own specialty make it *Evolutionary Biology* Jeffrey R. Powell Ph.D. Yale University

Germline Development Joan Marsh, Jamie A. Goode, 2008-04-30 Connects classical cellular descriptive studies with more recent work on the molecular and genetic aspects regarding germline development Prominent scientists discuss research on a range of organisms including insects worms birds fish amphibia mammals and green algae Specification of germ cells their migration to the gonads and subsequent interactions with the soma and evolutionary factors of their segregation are among the topics covered

Lost Sex Isa Schön, Koen Martens, Peter van Dijk, 2009-09-22 Sex is the queen of problems in evolutionary biology Generations of researchers have investigated one of the last remaining evolutionary paradoxes why sex exists at all Given that sexual reproduction is costly from an evolutionary point of view one could wonder why not all animals and plants reproduce asexually Dozens of contemporary hypotheses attempt to explain the prevalence of sex and its advantages and predict the early extinction of fully asexual lineages The major theme of this book is what is the fate of animal and plant groups in which sex is lost Initial chapters discuss theory behind asexual life what major disadvantages do asexual groups have to face what are the genetic and ecological consequences and what does this theory predict for more applied aspects of asexual life for example in agricultural pests diseases as well as in cultural crops such as grapes Cases studies in many animals focusing on both invertebrates and vertebrates and plants reveal parallel but also

singularly novel adaptations to the absence of meiosis and syngamy And last but not least are asexuals really doomed to early extinction or do genuine ancient asexuals exist This book assembles contributions from the most important research groups dealing with asexual evolution in eukaryotes It is a milestone in research on parthenogenesis and will be useful to undergraduate as well as graduate students and to senior researchers in all fields of evolutionary biology as the paradox of sex remains its queen of problems

Redox Metabolism and Longevity Relationships in Animals and Plants Christine Foyer, Richard Faragher, Paul Thornalley, 2009-06-02 Redox Metabolism and Longevity Relationships in Animals and Plants focuses on the recent issues that have emerged in ageing research in both the animal and plant kingdoms This volume reviews current concepts concerning cellular redox homeostasis and ageing in animals and plants relationships to programmed cell death the production of oxidants and dicarbonyls the ways that different organisms perceive and respond to oxidative nitration and glycation challenges and how this might be intricately connected to ageing and lifespan
