Low Density Lipoproteins:

Low Density Lipoproteins Charles Day, 2012-12-06 Low density lipoproteins LDL are pathophysiologically important because of their central role in the disease atherosclerosis and because atherosclerosis is the leading cause of death in developed countries Many researchers believe that a more detailed knowledge of the structure function and metabolism of LDL may eventually lead to a means to control atherosclerosis For this reason a fairly large research effort has gone into the investigation of LDL over the past few years The purpose of this book is to collect and summarize in one place most of the published information on LDL through 1975 To this end more than 1500 references are cited in the papers that make up this volume The A B C apolipoprotein classification system was adopted for use throughout this work In addition to the A B C and D families of apolipoproteins apoE is used to designate the arginine rich apolipoprotein This classification system is used because it is far less cumbersome than other proposed classification schemes for apolipoproteins **High Density**
