Kibele,2012-10-01 Regional mortality differences are one dimension of health inequalities but its trends and

determinants in Germany are widely unknown This book examines and illustrates patterns of regional mortality in Germany with focus on small area differentials and their changes over time It identifies explanatory factors at individual and regional level Mortality differences between eastern and western Germany exist but small area mortality differentials are often greater Though the main spatial mortality patterns remain this study provides evidence that some distinct changes in the small area mortality patterns in Germany especially among women occurred within a short period of time Mortality inequalities at younger ages and in behavior related causes as well as differences in socioeconomic conditions contribute strongly to regional mortality differences in Germany The book shows that the complex interplay between individual and regional level mortality risk factors requires a multidimensional approach to reduce regional mortality inequalities Red Holocaust Steven Rosefielde, 2009-12-16 Twentieth and twenty first century communism is a failed experiment in social engineering that needlessly killed approximately 60 million people and perhaps tens of millions more These high crimes against humanity constitute a Red Holocaust that exceeds the combined carnage of the French Reign of Terror Ha Shoah Showa Japan s Asian holocaust and all combat deaths in World War I and II This fascinating book investigates high crimes against humanity in the Soviet Union eastern and central Europe North Korea China Vietnam Laos and Cambodia 1929 2009 and compares the results with Ha Shoah and the Japanese Asian Holocaust As in other studies blame is ascribed to political ideological and personal causes but special emphasis is given to internal contradictions in Marx s utopian model as well as Stalinist and post Stalinist transition systems concocted to realize communist ends This faulty economic engineering forms a bridge to the larger issue of communism s historical failure The book includes a comprehensive study of the transcommunist holocaust a judicial assessment of holocaust culpability and special pleadings an obituary for Stalinism everywhere except North Korea and a death watch for contemporary communism in China Vietnam Laos Cambodia North Korea Cuba and Nepal a comparative assessment of totalitarian high crimes against humanity a call for memory as a defense against recurrent economic racial and ethnic holocausts The book will be useful to undergraduate and higher level students interested in Russian history Stalinism communism North and South Korean economic performance and international affairs Steven Rosefielde is a Professor of Economics at the University of North Carolina Chapel Hill and a member of the Russian Academy of Natural Sciences

Behavioral Epidemiology and Disease Prevention Robert M. Kaplan, Michael H.

Criqui, 2012-12-06 In the United States and in Europe there has been an increasing interest in the relationship between individual behavior and disease The American National Academy of Sciences Hamberg Elliott and Parron 1982 through its Institutes of Medicine has estimated that as many as 50 percent of chronic disease cases can be traced to individual behaviors such as smoking diet exercise etc Similar conclusions have been reached by a variety of European investigators and institutes The World Health Organization has also expressed considerable interest in individual behavior in relation to the development of chronic disease Thus throughout the NATO countries there has been increased awareness of the

relationship between behavior and disease However communication among investigators in different countries has been rather limited Further many different scientific disciplines including psychology sociology medicine microbiology statistics and epidemiology have all developed new and different literatures in this field One purpose of this book is to bring together contributions from scientists in each of these fields Much of the variance in individual health behavior occurs across countries rather than within countries Thus we can learn much from comparing behavior disease relationships across countries To date there have been few studies which have had an adequate international basis for these comparisons Interest in behavioral epidemiology is a relatively recent phenomena Thus many scientists are entering the field without uniform background experience or training This book discusses approaches common in a variety of NATO countries **A**
