Inside the Energiewende Christine Sturm, 2020-04-27 This book tells the story of one nation's sustained efforts to steer its economy toward low carbon technologies and to define national and global pathways for mitigating climate change. Drawing on a long career in Germany's energy sector and on subsequent academic research, the book reveals the weaknesses of and critical trade-offs in Germany's bold energy transition plan, the Energiewende, and explores their causes. Its goal is to provide insights to help policymakers and energy managers keep some of the problems that have plagued the Energiewende at bay and to instead explore avenues that are more likely to succeed. While such insights cannot solve the problem of socio-technical change overnight, they do reveal alternative transition pathways that keep climate goals clearly in sight even if they are pursued with a bit less exuberance and a bit more humility. The book is addressed to academic, professional, and political readers alike.

Antenna Design for Narrowband IoT: Design, Analysis, and Applications Pattanaik, Balachandra, Saravanan, M., Saravanakumar, U., T. R., Ganesh Babu, 2022-03-11 In internet of things (IoT) applications, wireless connectivity is a key factor, particularly those that need to be in transition or where wired communication is not effective or practicable. For top-notch connectivity of the Narrowband IoT (NB-IoT) standard, the 900MHz frequency is generally used by most of the vendors. The radiation quality not only depends on the antenna geometry but on immediate surroundings. Additionally, the IoT product itself and the user of the product can strongly affect the resulting radiation pattern and other characteristics of the antenna. On the other hand, a suitable antenna should also have high efficiency and adequate bandwidth covering the desired frequency range. To take these effects into consideration, the whole IoT product must be included in the antenna simulations. *Antenna Design for Narrowband IoT: Design, Analysis, and Applications* provides the antenna design concept for narrowband internet of things applications, performs a detailed analysis of the antenna, and discusses the various antenna design concepts and structures. Covering a range of topics such as antenna design and antenna measurement systems, this book is ideal for industry professionals, research scholars, academicians, professors, and students.

Handbook of Research on Methodologies and Applications of Supercomputing Milutinović, Veljko, Kotlar, Miloš, 2021-02-19 As computers continue to remain essential tools for the pursuit of physics, medicine, economics, social sciences, and more, supercomputers are proving that they can further extend and greatly enhance as of yet undiscovered knowledge and solve the world's most complex problems. As these instruments continue to lead to groundbreaking discoveries and breakthroughs, it is imperative that research remains up to date with the latest findings and uses. *The Handbook of Research on Methodologies and Applications of Supercomputing* is a comprehensive and critical reference book that provides research on the latest advances of control flow and dataflow supercomputing and highlights selected emerging big data applications needing high acceleration and/or low power. Consequently, this book advocates the need for hybrid computing where the control flow part represents the host architecture and dataflow part represents the acceleration architecture. These issues cover the initial eight chapters. The remaining eight chapters cover selected modern applications that are best implemented on a hybrid

computer in which the transactional parts serial code are implemented on the control flow part and the loops parallel code on the dataflow part These final eight chapters cover two major application domains scientific computing and computing for digital economy This book offers applications in marketing medicine energy systems and library science among others and is an essential source for scientists programmers engineers practitioners researchers academicians and students interested in the latest findings and advancements in supercomputing Renewable Energy Resources John Twidell, Tony
