The Oxford Companion to Archaeology Neil Asher Silberman, Alexander A. Bauer, Cornelius Holtorf, Margarita Díaz-Andreu García, Emma Waterton, 2012 *The Oxford Companion to Archaeology* Brian M. Fagan, 1996-12-05 When we think of archaeology most of us think first of its many spectacular finds the legendary city of Troy Tutankhamun's golden tomb the three million year old footprints at Laetoli the mile high city at Machu Picchu the cave paintings at Lascaux But as marvelous as these discoveries are the ultimate goal of archaeology and of archaeologists is something far more ambitious Indeed it is one of humanity's great quests to recapture and understand our human past across vast stretches of time as it was lived in every corner of the globe Now in *The Oxford Companion to Archaeology* readers have a comprehensive and authoritative overview of this fascinating discipline in a book that is itself a rare find a treasure of up to date information on virtually every aspect of the field The range of subjects covered here is breathtaking everything from the domestication of the camel to Egyptian hieroglyphics to luminescence dating to the Mayan calendar to Koobi Fora and Olduvai Gorge Readers will find extensive essays that illuminate the full history of archaeology from the discovery of Herculaneum in 1783 to the recent finding of the Ice Man and the ancient city of Uruk and engaging biographies of the great figures in the field from Gertrude Bell Paul Emile Botta and Louis and Mary Leakey to V Gordon Childe Li Chi Heinrich Schliemann and Max Uhle The Companion offers extensive coverage of the methods used in archaeological research revealing how archaeologists find sites remote sensing aerial photography ground survey how they map excavations and report findings and how they analyze artifacts radiocarbon dating dendrochronology stratigraphy mortuary analysis Of

course archaeology's great subject is humanity and human culture and there are broad essays that examine human evolution ranging from our early primate ancestors to Australopithecus and Cro-Magnon to Homo Erectus and Neanderthals and explore the many general facets of culture from art and architecture to arms and armor to beer and brewing to astronomy and religion. And perhaps most important the contributors provide insightful coverage of human culture as it has been expressed in every region of the world. Here entries range from broad overviews to treatments of particular themes to discussions of peoples, societies and particular sites. Thus anyone interested in North America would find articles that cover the continent from the Arctic to the Eastern woodlands to the Northwest Coast that discuss the Iroquois and Algonquian cultures, the hunters of the North American plains and the Norse in North America and that describe sites such as Mesa Verde, Meadowcroft, Rockshelter, Serpent Mound and Poverty Point. Likewise the coverage of Europe runs from the Paleolithic period to the Bronze and Iron Age to the Post Roman era, looks at peoples such as the Celts, the Germans, the Vikings and the Slavs and describes sites at Altamira, Pompeii, Stonehenge, Terra Amata and dozens of other locales. The Companion offers equally thorough coverage of Africa, Europe, North America, Mesoamerica, South America, Asia, the Mediterranean, the Near East, Australia and the Pacific. And finally the editors have included extensive cross referencing and thorough indexing enabling the reader to pursue topics of interest with ease, charts and maps providing additional information and bibliographies after most entries directing readers to the best sources for further study. Every Oxford Companion aspires to be the definitive overview of a field of study at a particular moment of time. This superb volume is no exception. Featuring 700 articles written by hundreds of respected scholars from all over the world, The Oxford Companion to Archaeology provides authoritative, stimulating entries on everything from bog bodies to underwater archaeology to the Pyramids of Giza and the Valley of the Kings.

The Evolution of Human Populations in Arabia Michael D. Petraglia,Jeffrey I. Rose,2009-11-27 The romantic landscapes and exotic cultures of Arabia have long captured the interests of both academics and the general public alike The wide array and incredible variety of environments found across the Arabian peninsula are truly dramatic tropical coastal plains are found bordering up against barren sandy deserts high mountain plateaus are deeply incised by ancient river courses As the birthplace of Islam the recent history of the region is well documented and thoroughly studied However legendary explorers such as T E Lawrence Wilfred Thesiger and St John Philby discovered hints of a much deeper past during their travels across the subcontinent Drawn to Arabia by the magnificent solitude of its vast sand seas these intrepid adventurers learned from the Bedouin how to penetrate its deserts and returned with stirring accounts of lost civilizations among the wind swept dunes We now know that prior to recorded history Arabia housed countless peoples living a variety of lifestyles including some of the world s earliest pastoralists communities of incipient farmers fishermen dubbed the Ichthyophagi by ancient Greek geographers and Paleolithic big game hunters who were among the first humans to depart their ancestral homeland in Africa In fact some archaeological investigations indicate that Arabia was inhabited by early hominins extending far back into the Early Pleistocene perhaps even into the Late Pliocene

variety of human ancestors and was not confined to one part of the Old World Crossing the Human Threshold examines the changing evidence during this period for the use of place landscape and technology It focuses on the emergence of persistent places and associated developments in tool use hunting strategies and the control of fire represented across the Old World by deeply stratified cave sites These include the most important sites for the archaeology of human origins in the Levant South Africa Asia and Europe presented here as evidence for innovation in landscape thinking during the Middle Pleistocene The volume also examines persistence at open locales through a cutting edge review of the archaeology of Northern France and England Crossing the Human Threshold is for the worldwide community of students and researchers studying early hominins and human evolution It presents new archaeological data It frames the evidence within current debates to understand the differences and similarities between ourselves and our ancient ancestors

Experimental Determination of Stone Tool Uses Lawrence H. Keeley, 1980-03-15 A major problem confronting archeologists is how to determine the function of ancient stone tools In this important work Lawrence H Keeley reports on his own highly successful course of research into the uses of British Paleolithic flint implements His principal method of investigation known as microwear analysis was the microscopic examination of traces of use left on flint implements in the form of polishes striations and breakage patterns The most important discovery arising from Keeley s research was that at magnifications of 100x to 400x there was a high correlation between the detailed appearance of microwear polishes formed on tool edges and the general category of material worked by that edge For example different and distinctive types of microwear polish were formed during use on wood bone hide meat and soft plant material These correlations between microwear polish and worked material were independent of the method of use cutting sawing scraping and so on In combining evidence of polish type with other traces of use Keeley was able to make precise reconstructions of tool functions This book includes the results of a blind test of Keeley s functional interpretations which revealed remarkable agreement between the actual and inferred use of the tools tested Keeley applied his method of microwear analysis to artifacts from three excavation sites in Britain Clacton on the sea Swanscombe and Hoxne His research suggests new hypotheses concerning such Paleolithic problems as inter assemblage variability the function of Acheulean hand axes sidescrapers and chopper cores and points the way to future research in Stone Age studies
