Energy, Waste and the Environment R. Gieré, Peter Stille, 2004 This book provides incentives for further development of sustainable fuel cycles through a novel and interdisciplinary approach to an Earth science related topic The main focus is on geochemical concepts in immobilizing isolating or neutralizing waste derived from energy

production and consumption The book also addresses the issue of using some types of energy derived waste as alternative raw materials Moreover it highlights research on how certain wastes can be used for energy production an increasingly important aspect of modern integrated waste management strategies The main objectives are to a identify the most serious environmental problems related to various types of power generation and associated waste accumulation b present strategies based on natural analogue materials for the immobilization of toxic and radioactive waste components through mineralogical barriers c discuss modern procedures for reuse of waste or certain waste components and d review the importance of geochemical modelling in describing and predicting the interaction between waste and the environment **Ionizing and**

Non-ionizing Radiation Adelaja Osibote,2020-01-15 This book provides readers with comprehensive details on the management and measures to protect health against risks to people and environments generated by the use of ionizing and non ionizing radiation This book is divided into three sections namely Radiation Protection and Measurement Radiation Therapy and Radioactivity The first section covers ionizing radiation protection population exposure to non ionizing density and the system of dosimetry quantities for use in emergency preparedness and response to nuclear or radiological accidents The second section covers various planning techniques for spinal stereotactic body radiotherapy and the application of radiation technology in the development of a malaria vaccine The third section discusses environmental radioactivity monitoring using efficient measurements and the assessment of radiation exposure to humans Also in this section is the evaluation of the effects of chronic radiation exposure on the testes of mice after a nuclear power plant accident **Book**
