

6 THINGS YOU MAY NOT KNOW ABOUT LYMPHEDEMA

1 Lymphedema is chronic swelling caused by a build-up of fluid that occurs when the lymphatic system is either faulty or damaged.

Damaged vessels blocking the normal flow of lymphatic fluid

3 Most physicians in the United States are taught about the lymphatic system for 1 hour or less during their 4 years of medical school training.

4 There is no known cure for lymphedema, but it can be effectively treated. Compression therapy is the most critical component of treatment. Without it, patients are at increased risk for complications and disability.

5 Medicare, and many private insurance policies do NOT cover compression garments, wraps, or bandages — the supplies needed for compression therapy.

6 The Lymphedema Treatment Act is a bill, currently in Congress, that aims to improve insurance coverage for compression supplies, allowing lymphedema patients to maintain a healthy and productive life.

2 An estimated 3-5 million Americans suffer from lymphedema — including many that are undiagnosed or undertreated. That is more than ALS, Cystic Fibrosis, Multiple Sclerosis, Muscular Dystrophy, and Parkinson's Disease combined.

2 out of 5 breast cancer patients will develop lymphedema within 5 years of surgery.*
