Artificial Intelligence, Automated Reasoning, and Symbolic Computation Jacques Calmet, Belaid Benhamou, Olga Caprotti, Laurent Henocque, Volker Sorge, 2003-08-02 AISC 2002 the 6th international conference on Artificial Intelligence and Symbolic Computation and Calculemus 2002 the 10th symposium on the Integration of Symbolic Computation and Mechanized Reasoning were held jointly in Marseille France on July 15 2002 This event was organized by the three universities in Marseille together with the LSIS Laboratoire des Sciences de l'Information et des Systèmes AISC 2002 was the latest in a series of specialized conferences founded by John Campbell and Jacques Calmet with the initial title Artificial Intelligence and Symbolic Mathematical Computation AISMC and later denoted Artificial Intelligence and Symbolic Computation AISC The scope is well defined by its successive titles AISMC 1 1992 AISMC 2 1994 AISMC 3 1996 AISC 98 and AISC 2000 took place in Karlsruhe Cambridge Steyr Plattsburgh NY and Madrid respectively The proceedings were published by Springer Verlag as LNCS 737 LNCS 958 LNCS 1138 LNAI 1476 and LNAI 1930 respectively Calculemus 2002 was the 10th symposium in a series which started with three meetings in 1996 two meetings in 1997 and then turned into a yearly event in 1998 Since then it has become a tradition to hold the meeting jointly with an event in either symbolic computation or automated deduction Both events share common interests in looking at Symbolic Computation each from a different point of view Artificial Intelligence in the more general case of AISC and Automated Deduction in the more specific case of Calculemus

Advances in the Design of Symbolic Computation Systems Alfonso Miola, Marco Temperini, 2012-12-06 New methodological aspects related to design and implementation of symbolic computation systems are considered in this volume aiming at integrating such aspects into a homogeneous software environment for scientific computation The proposed methodology is based on a combination of different techniques algebraic specification through modular approach and completion algorithms approximated and exact algebraic computing methods object oriented programming paradigm automated theorem proving through methods à la Hilbert and methods of natural deduction In particular the proposed treatment of mathematical objects via techniques for method abstraction structures classification and exact representation the programming methodology which supports the design and implementation issues and reasoning capabilities supported by the whole framework are described Design and Implementation of Symbolic Computation Systems Alfonso

Miola, 1993-09-02 This volume constitutes the proceedings of the International Symposium on Design and Implementation of Symbolic Computation Systems DISCO 93 held in Gmunden Austria in September 1993 The growing importance of systems for symbolic computation has greatly influenced the decision of organizing this third conference in the series DISCO 93 focuses mainly on the most innovative methodological and technological aspects of the design and implementation of hardware and software systems for symbolic and algebraic computation automated reasoning geometric modeling and computation and automatic programming The general objective of DISCO 93 is to present an up to date view of the field and

to serve as a forum in symbolic computation for the scientific exchange among academic industrial and user communities Besides invited talks by Buchberger Monagan Omodeo and Hong the volume contains 28 contributions carefully selected by a highly competent international program committee from a total of 56 submissions Artificial Intelligence and Symbolic Mathematical Computing Jacques Calmet, John A. Campbell, 1993-10-05 This volume contains the papers updated in some cases presented at the first AISMC Artificial Intelligence and Symbolic Mathematical Computations conference held in Karlsruhe August 3 6 1992 This was the first conference to be devoted to such a topic after a long period when SMC made no appearance in AI conferences though it used to be welcome in the early days of AI Some conferences were held recently on mathematics and AI but none was directly comparable in scope to this conference Because of the novelty of the domain authors were given longer allocations of time than usual in which to present their work As a result extended and fruitful discussions followed each paper The introductory chapter in this book which was not presented during the conference reflects in many ways the flavor of these discussions and aims to set out the framework for future activities in this domain of research In addition to the introduction the volume contains 20 papers **Machine Learning** R.S. Abductive Inference Models for Diagnostic Problem-Solving Yun Peng,James A. Reggia,2012-12-06 Making a diagnosis when something goes wrong with a natural or m made system can be difficult In many fields such as medicine or electrics a long training period and apprenticeship are required to become a skilled diagnostician During this time a novice diagnostician is asked to assimilate a large amount of knowledge about the class of systems to be diagnosed In contrast the novice is not really taught how to reason with this

knowledge in arriving at a conclusion or a diagnosis except perhaps implicitly through ease of examples. This would seem to indicate that many of the essential aspects of diagnostic reasoning are a type of intuitive based common sense reasoning. More precisely, diagnostic reasoning can be classified as a type of inference known as abductive reasoning or abduction. Abduction is defined to be a process of generating a plausible explanation for a given set of observations or facts. Although mentioned in Aristotle's work, the study of formal aspects of abduction did not really start until about a century ago. *The Knowledge Frontier* Nick Cercone, Gordon McCalla, 2012-12-06 Knowledge representation is perhaps the most central problem confronting artificial intelligence. Expert systems need knowledge of their domain of expertise in order to function properly. Computer vision systems need to know characteristics of what they are seeing in order to be able to fully interpret scenes. Natural language systems are invaluabley aided by knowledge of the subject of the natural language discourse and knowledge of the participants in the discourse. Knowledge can guide learning systems towards better understanding and can aid problem solving systems in creating plans to solve various problems. Applications such as intelligent tutoring, computer aided VLSI design, game playing, automatic programming, medical reasoning, diagnosis in various domains and speech recognition to name a few are all currently experimenting with knowledge based approaches. The problem of knowledge representation breaks down into several subsidiary problems including what knowledge to represent in a particular application, how to extract or create that knowledge, how to represent the knowledge efficiently and effectively, how to implement the knowledge representation scheme chosen, how to modify the knowledge in the face of a changing world, how to reason with the knowledge and how to use the knowledge appropriately in the creation of the application solution. This volume contains an elaboration of many of these basic issues from a variety of perspectives. **Developing Semantic Web Services** H. Peter Alesso, Craig F. Smith, 2004-10-27 Developing Semantic Web Services is well informed about work on WS Web Services and the SemWeb Semantic Web and in particular understands OWL S very well. Also, the book fills a need that to my knowledge hasn't been met at all. David Martin, editor OWL S Coalition. The inventor of the World Wide Web, Tim Berners-Lee, is also the originator of the next generation Web architecture, the Semantic Web. Currently, his World Wide Web consortium W3C team works to develop, extend and standardize the Web's markup languages and tools. The objective of the Semantic Web Architecture is to provide a knowledge representation of linked data in order to allow machine processing on a global scale. The W3C has developed a new generation of open standard markup languages which are now poised to unleash the power, flexibility and above all, logic of the next generation Web as well as open the door to the next generation of Web Services. There are many ways in which the two areas of Web Services and the Semantic Web could interact to lead to the further development of Semantic Web Services. Berners-Lee has suggested that both of these technologies would benefit from integration that would combine the Semantic Web's meaningful content with Web Services business logic. Areas such as UDDI and WSDL are ideally suited to be implemented using Semantic Web technology. In addition, SOAP could use RDF.

payloads remote RDF query and updates and interact with Semantic Web business rules engines thereby laying the foundation for Semantic Web Services This book presents the complete Language Pyramid of Web markup languages including Resource Description Framework RDF Web Ontology Language OWL and OWL Services OWL S along with examples and software demos The source code for the Semantic Web Author an Integrated Development Environment for Semantic Markup Languages is available on CD ROM with the book **Computation of Language** Roland

Hausser,2012-12-06 The study of linguistics has been forever changed by the advent of the computer Not only does the machine permit the processing of enormous quantities of text thereby securing a better empirical foundation for conclusions but also since it is a modelling device the machine allows the implementation of theories of grammar and other kinds of language processing Models can have very unexpected properties both good and bad and it is only through extensive tests that the value of a model can be properly assessed The computer revolution has been going on for many years and its importance for linguistics was recognized early on but the more recent spread of personal workstations has made it a reality that can no longer be ignored by anyone in the subject The present essay in particular could never have been written without the aid of the computer I know personally from conversations and consultations with the author over many months how the book has changed If he did not have at his command a powerful typesetting program he would not have been able to see how his writing looked and exactly how it had to be revised and amplified Even more significant for the evolution of the linguistic theory is the easy testing of examples made possible by the implementation of the parser and the computer held lexicon Indeed the rule set and lexicon grew substantially after the successes of the early implementations created the desire to incorporate more linguistic phenomena **Machine Learning** Ryszard S. D'Ambrosio,2012-12-06 8 5 Summary In this chapter we have identified three basic patterns of influences that lead to ambiguity in the QP analysis of the basic active furnace state We have then shown how modification of these patterns by adding equilibrium values and sensitivity annotations on influence arcs could permit resolution of the ambiguities Finally we have described in detail the extensions needed to the basic influence resolution algorithm in QP theory to operate on these extended descriptions We have also shown that the modified influence resolution algorithm corrects an error in Forbus original method for combining influences We have then presented an extended example in which introduction of equilibrium assumptions eliminates all ambiguity in the influence resolution deduction In the next chapter we extend these techniques further by developing a qualitative perturbation analysis technique that permits us to answer what if control questions then we extend this technique to obtain quantitative as well as qualitative effects of hypothetical control actions 8
