Manfred Mohr Manfred Mohr, 2007 Manfred Mohr Manfred Mohr, Frieder Nake, 2001 **When the Machine Made Art** Grant D. Taylor, 2014-04-10 Considering how culturally indispensable digital technology is today it is ironic that computer generated art was attacked when it burst onto the scene in the early 1960s In fact no other twentieth century art form has elicited such a negative and hostile response When the Machine Made Art examines the cultural and critical response to computer art or what we refer to today as digital art Tracing the heated debates between art and science the societal anxiety over nascent computer technology and the myths and philosophies surrounding digital computation Taylor is able to identify the destabilizing forces that shape and eventually fragment the computer art movement **Manfred mohr**, 1989 **Explorations in Art and Technology** Linda Candy, Ernest Edmonds, Fabrizio Poltronieri, 2018-10-04 Explorations in Art and Technology presents the explorations in Art and Technology of the Creativity Cognition Research Studios The Studios were created to bring together the visions and expertise of people working at the boundaries of art and digital media The book explores the nature of intersection and correspondence across these disciplinary boundaries practices and conceptual frameworks through artists illustrated contributions and studies of work in progress These experiences are placed within the context of recent digital art history and the innovations of early pioneers Manfred Mohr Manfred Mohr, 1979 *Computers and Creativity* Jon McCormack, Mark d'Inverno, 2012-08-21 This interdisciplinary volume introduces new theories and ideas on creativity from the perspectives of science and art Featuring contributions from leading researchers theorists and artists working in artificial intelligence generative art creative computing music composition and cybernetics the book examines the relationship between computation and creativity from both analytic and practical perspectives Each contributor describes innovative new ways creativity can be understood through and inspired by computers The book tackles critical philosophical questions and discusses the major issues raised by computational creativity including whether a computer can exhibit creativity independently of its creator what kinds of creativity are possible in light of our knowledge from computational simulation artificial intelligence evolutionary theory and information theory and whether we can begin to automate the evaluation of aesthetics and creativity in silico These important often controversial questions are contextualised by current thinking in computational creative arts practice Leading artistic practitioners discuss their approaches to working creatively with computational systems in a diverse array of media including music sound art visual art and interactivity The volume also includes a comprehensive review of computational aesthetic evaluation and judgement research alongside discussion and insights from pioneering artists working with computation as a creative medium over the last fifty years A distinguishing feature of this volume is that it explains and grounds new theoretical ideas on creativity through practical applications and creative practice Computers and Creativity will appeal to theorists researchers in artificial intelligence generative and evolutionary computing practicing artists and musicians students and any

Chromatic Algorithms Carolyn L. Kane, 2014-08-13 These days we take for granted that our computer screens and even our phones will show us images in vibrant full color Digital color is a fundamental part of how we use our devices but we never give a thought to how it is produced or how it came about *Chromatic Algorithms* reveals the fascinating history behind digital color tracing it from the work of a few brilliant computer scientists and experimentally minded artists in the late 1960s and early 70s through to its appearance in commercial software in the early 1990s Mixing philosophy of technology aesthetics and media analysis Carolyn Kane shows how revolutionary the earliest computer generated colors were built with the massive postwar number crunching machines these first examples of computer art were so fantastic that artists and computer scientists regarded them as psychedelic even revolutionary harbingers of a better future for humans and machines But Kane shows the explosive growth of personal computing and its accompanying need for off the shelf software led to standardization and the gradual closing of the experimental field in which computer artists had thrived Even so the gap between the bright bold presence of color onscreen and the increasing abstraction of its underlying code continues to lure artists and designers from a wide range of fields and Kane draws on their work to pose fascinating questions about the relationships among art code science and media in the twenty first century
