The Unified Modeling Language. "UML" '98: Beyond the Notation Jean Bezivin, Pierre-Alain Muller, 2004-06-30 This volume contains mainly the revised versions of papers presented at the workshop 98 Beyond the Notation that took place in Mulhouse France on June 3 4 1998 We thank all those that have made this possible and particularly all the people in Mulhouse that worked hard to make this meeting a success with such a short delay between the announcement and the realization We are specially grateful to Nathalie Gaertner who put in a tremendous amount of effort in the initial preparation of the workshop We were pleasantly surprised of the quality of the submitted material and of the level of the technical exchanges at the Mulhouse meeting More than one hundred attendees from about twenty different countries representing the main actors in the UML research and development scene gathered in Mulhouse for two full study days We would like to express our deepest appreciation to the authors of submitted papers the editorial committee for this volume the program committee for the initial workshop the external referees and many others who contributed towards the final contents of this volume April 1999 Jean Bezivin Pierre

Alain Muller **UML'99 - The Unified Modeling Language: Beyond the Standard** Robert B. France, Bernhard Rumpe, 2003-07-31 This book constitutes the refereed proceedings of the Second International Conference on the Unified Modeling Language UML 99 held in Fort Collins CO USA in September 1999 The 44 revised full papers presented together with two invited contributions and three panel summaries were carefully reviewed and selected from a total of 166 submissions The papers are organized in topical sections on software architecture UML and other notations formalizing interactions meta modeling tools components UML extension mechanisms process modeling real time systems constraint languages analyzing UML models precise behavioral modeling applying UML sequence design and coding Conceptual

Modeling - ER 2002 Stefano Spaccapietra, Salvatore March, Yahiko Kambayashi, 2003-06-30 For more than 20 years the series of Conceptual Modeling ER conferences has provided a forum for research communities and practitioners to present and change research results and practical experiences in the fields of database design and conceptual modeling Throughout the years the scope of these conferences has extended from database design and specific topics of that area to more universal or refined conceptual modeling organizing originally weak or ill structured information or knowledge in more cultured ways by applying various kinds of principles abstract models and theories for different purposes At the same time many technically oriented approaches have been developed which aim to facilitate the implementation of rather advanced conceptual models Conceptual modeling is based on the process of conceptualization and it is the core of system structuring as well as justification for information systems development It supports and facilitates the understanding explanation prediction and reasoning on information and knowledge and their manipulation in the systems in addition to understanding and designing the functions of the systems The conceptualization process aims at constructing concepts relevant for the knowledge and information system in question Concepts in the human mind and concept descriptions in computerized information systems are quite different things by nature but both should be taken into account in conceptual modeling Usually concept descriptions are properly observed but concepts in the human mind and their properties are often neglected quite carelessly

UML 2002 - The Unified Modeling Language: Model Engineering, Concepts, and Tools Jean-Marc Jezequel, Heinrich Hussman, Stephen Cook, 2003-08-02 Five years on from its adoption in 1997 by the Object Management Group OMG the Unified Modeling Language is the de facto standard for creating agrammatic models of software systems More than 100 books have been written about UML and it is taught to students throughout the world The definition of UML version 2 is well under way and should be largely completed within the year This will not only improve and enhance UML itself including standard facilities for diagram interchange but also make it fully integrated with other modeling technologies from the OMG such as Meta Object Facility MOF and XML Metadata Interchange XMI The Object Constraint Language which has become an important vehicle for communicating detailed insights between UML researchers and practitioners will have a much expanded specification and be better integrated with the UML The popularity of UML signifies the possibility of a shift of immense proportions in the practice of software development at least comparable to the shift from the use of assembly language to third generation or high level programming languages We dream of describing the behavior of software systems in terms of models closely related to the needs of the enterprise being served and being able to routinely translate these models automatically into executing programs on distributed computing systems The OMG is promoting Model Driven Architecture MDA as a significant step towards this vision and the MDA concept has received considerable support within the IT industry

The Unified Modeling Language Martin Schader, Axel Korthaus, 2012-12-06 Most of the articles in this volume are revised versions of papers presented during the 1st GROOM Workshop on the Unified Modeling Language UML GROOM

Grundlagen objektorientierter Modellierung is a working group of the Gesellschaft für Informatik GI the German Society of Computer Science The workshop took place at the University of Mannheim Germany in October 1997 the local organizers were Martin Schader and Axel Korthaus Department of Information Systems The scientific program of the workshop included 21 talks presented in German language on Friday Oct 10th and Saturday Oct 11th 1997 Researchers and practitioners interested in object oriented software development analysis and design of software systems standardization efforts in the field of object technology and particularly in the main topic of the workshop Applications State of the Art and Evaluation of the Unified Modeling Language had the opportunity to discuss recent developments and to establish cooperation in these fields The workshop owed much to its sponsors and supporters University of Mannheim Faculty of Business Administration University of Mannheim Sun Microsystems GmbH Apcon Professional Concepts GmbH Their generous support is gratefully acknowledged In the present proceedings volume papers are presented in three chapters as follows **Reference**

Modeling for Business Systems Analysis Fettke, Peter, Loos, Peter, 2006-10-31 This book provides insights into state of the art modeling languages and methods used for reference modeling A reference model provides a blueprint for information systems development and analysis Well established reference models for industrial retail and other industries are described Provided by publisher *Handbook of Object Technology* Saba Zamir, 1998-12-18 The object oriented paradigm has become one of the dominant forces in the computing world According to a recent survey by the year 2000 more than 80% of development organizations are expected to use object technology as the basis for their distributed development strategies Handbook of Object Technology encompasses the entire spectrum of disciplines and topics related to this rapidly expanding field outlining emerging technologies latest advances current trends new specifications and ongoing research The handbook divides into 13 sections each containing chapters related to that specific discipline Up to date non abstract information provides the reader with practical useful knowledge directly applicable to the understanding and improvement of the reader's job or the area of interest related to this technology Handbook of Object Technology discusses the processes notation and tools for classical OO methodologies as well as information on future methodologies prevalent and emerging OO languages standards and specifications frameworks and patterns databases metrics business objects intranets analysis design tools client server application development environments **UML 2003 -- The Unified Modeling Language, Modeling**

Languages and Applications Perdita Stevens, Jon Whittle, Grady Booch, 2003-10-02

The past year has been an eventful one for those interested in software modeling The first major revision of the Unified Modeling Language UML 2.0 is in the process of adoption by the Object Management Group OMG and it makes many long desired additions and improvements to UML At the same time it expands what was already a large language A challenge for both practitioners and researchers is to help smooth the adoption of this new language Increasingly attention is being paid to the use of specialized languages often profiles of UML appropriate for different purposes this is one way to make UML less overwhelming

Accordingly the focus of the UML conference is gradually expanding from UML to software modeling in general. Simultaneously model driven development is being pursued as a way of creasing the bene ts from modeling throughout the software development p cess. Gradually it is developing from a set of slogans into a reality. Many of the papers in this volume are concerned directly or indirectly with how to make modeling rather than coding the heart of software development and how to realize the resulting bene ts of higher level thinking. Much work remains to be done.
