Orienting Response In Information Processing:

The Orienting Response in Information Processing Heikki Lyytinen, Risto Naatanen, Evgeni N. Sokolov, John Spinks, 2002-01-01 This book is a testimony to Evgeny Nikolaevich Sokolov's years of work in developing knowledge in the areas of perception, information processing and attention and to the research it has spawned. It presents a historical account of a research program leading the reader toward a cognitive science approach to the study of perception and attention. An understanding of neuroscience and mathematical modeling are helpful prerequisites. The co-authors collected data on orienting, attention and information processing in the brain using single cell recordings, central autonomic, cognitive, behavioral and verbal measures. This commonality brought them together for a series of meetings which resulted in the production of this book. The book ends with a review of some of the co-authors' studies that have developed from or in parallel with Sokolov's research. They investigate in particular the concepts of attention and anticipation using a psychophysiological methodology.

Attention and information processing in infants and adults B. A. Campbell, H. Hayne, R. Richardson, Byron A. Campbell, 2014-01-02 First published in 1991. The impetus for this book and the conference upon which it was based stemmed from the authors' observation that the interrelated phenomena of attention and information processing were the focus of intensive theoretical analysis and empirical research in many different scientific disciplines. The goal of the conference upon which this volume is based was to bring together a distinguished group of investigators from different fields who had rarely or never interacted. The specific issues addressed in the present volume concern the changes that occur in attention and information processing during development, the role of selective attention and pre-attentive mechanisms in information processing, the allocation of processing resources, the physiological correlates of attention and the role of attention-like processes in learning and memory in animals. The participants were from all over the world and represented the areas of psychophysiology, human infancy, developmental psychobiology, animal learning, autonomic regulation and psychopathology.

Interference and Inhibition in Cognition Charles J. Brainerd, Frank N. Dempster, 1995-02-08 Life scientists have long been familiar with the notion of interference and inhibition in biological systems, most notably in the neuron. Now these concepts have been applied to cognitive psychology to explain processes in attention, learning, memory, comprehension and reasoning. Presenting an overview of research findings in this realm, *Interference and Inhibition in Cognition* discusses what processes are sensitive to interference, individual differences in interference sensitivity and how age and experience factor into one's ability to inhibit interference. Provides empirical and theoretical perspectives. Discusses how inhibition and interference change with age and experience. Illustrates the ways in which interference affects language.
