Sets and integration An outline of the development D. van Dalen, 2012-12-06 The present text resulted from lectures given by the authors at the Rijks Universiteit at Utrecht These lectures were part of a series on History of Contemporary Mathematics The need for such an enterprise was generally felt since the curriculum at many universities is designed to suit an efficient treatment of advanced subjects rather than to reflect the development of notions and techniques As it is very likely that this trend will continue we decided to offer lectures of a less technical nature to provide students and interested listeners with a survey of the history of topics in our present day mathematics We consider it very useful for a mathematician to have an acquaintance with the history of the development of his subject especially in the nineteenth century where the germs of many of modern disciplines can be found Our attention has therefore been mainly directed to relatively young developments In the lectures we tried to stay clear of both oversimplification and extreme technicality The result is a text that should not cause difficulties to a reader with a working knowledge of mathematics The developments sketched in this book are fundamental for many areas in mathematics and the notions considered are crucial almost everywhere The book may be most useful in particular for those teaching mathematics
