Several Complex Variables Proceedings Of The 1981 Hangzhou Conference:

Several Complex Variables KOHN, LU, REMMERT, SIU, 2012-12-06 In recent years there has been increasing interaction among various branches of mathematics. This is especially evident in the theory of several complex variables where fruitful interplays of the methods of algebraic geometry, differential geometry and partial differential equations have led to unexpected insights and new directions of research. In China there has been a long tradition of study in complex analysis, differential geometry and differential equations as interrelated subjects due to the influence of Professors S. S. Chern and L. K. Hua. After a long period of isolation in recent years there is a resurgence of scientific activity and a resumption of scientific exchange with other countries. The Hangzhou conference is the first international conference in several complex variables held in China. It offered a good opportunity for mathematicians from China, U.S., Germany, Japan, Canada and France to meet and to discuss their work. The papers presented in the conference encompass all major aspects of several complex variables in particular in such areas as complex differential geometry, integral representation, boundary behavior of holomorphic functions, invariant metrics, holomorphic vector bundles and pseudoconvexity. Most of the participants wrote up their talks for these proceedings. Some of the papers are surveys and the others present original results. This volume constitutes an overview of the current trends of research in several complex variables.

The Bochner-Martinelli Integral and Its Applications Alexander M. Kytmanov, 2012-12-06 The Bochner-Martinelli integral representation for holomorphic functions of several complex variables which has already become classical appeared in the works of Martinelli and Bochner at the beginning of the 1940s. It was the first essentially multidimensional representation in which the integration takes place over the whole boundary of the domain. This integral representation has a universal kernel not depending on the form of the domain like the Cauchy kernel in $\mathbb{C}^n$. However, in $\mathbb{C}^n$ when $n \geq 1$ the Bochner-Martinelli kernel is harmonic but not holomorphic. For a long time this circumstance prevented the wide application of the Bochner-Martinelli integral in multidimensional complex analysis. Martinelli and Bochner used their representation to prove the theorem of Hartogs-Osgood-Brown on removability of compact singularities of holomorphic functions in $\mathbb{C}^n$ when $n \geq 1$. In the 1950s and 1960s only isolated works appeared that studied the boundary behavior of Bochner-Martinelli type integrals by analogy with Cauchy type integrals. This study was based on the Bochner-Martinelli integral being the sum of a double layer potential and the tangential derivative of a single layer potential. Therefore the Bochner-Martinelli integral has a jump that agrees with the integrand but it behaves like the Cauchy integral under approach to the boundary that is somewhat worse than the double layer potential. Thus the Bochner-Martinelli integral combines properties of the Cauchy integral and the double layer potential.

Complex Analysis Steven G. Krantz, 2006-11-14 This conference gathered together a small group of people with similar interests in the geometric function theory of several complex variables. While the speeches were of a specialized nature the papers in the proceedings are largely of a survey and speculative nature. The volume is intended to serve both students and researchers as

Number Theory: The Mathematics of Leon Ehrenpreis Eric Grinberg, 2000 This book presents the proceedings from the conference honoring the work of Leon Ehrenpreis Professor Ehrenpreis worked in many different areas of mathematics and found connections among all of them For example one can find his analytic ideas in the context of number theory geometric thinking within analysis transcendental number theory applied to partial differential equations and more The conference brought together the communities of mathematicians working in the areas of interest to Professor Ehrenpreis and allowed them to share the research inspired by his work The collection of articles here presents current research on PDEs several complex variables analytic number theory integral geometry and tomography The work of Professor Ehrenpreis has contributed to basic definitions in these areas and has motivated a wealth of research results This volume offers a survey of the fundamental principles that unified the conference and influenced the mathematics of Leon Ehrenpreis Complex Analysis and Geometry Jeffery D.
