one actually has the answer.

electronic engineering and the way he used his mathematics to create the main concepts and techniques of the statistical theory of communication In particular the author presents Wiener surrounded by the engineers that worked at MIT with whom he maintained strong contact It was in this atmosphere that information theory arose and Wiener was a main influence on the people who developed that theory

The Dome of Eden Stephen H. Webb, 2010-01-01 What would biology look like if it took the problem of natural evil seriously This book argues that biological descriptions of evolution are inherently moral just as the biblical story of creation has biological implications A complete account of evolution will therefore require theological input The Dome of Eden does not try to harmonize evolution and creation Harmonizers typically begin with Darwinism and then try to add just enough religion to make evolution more palatable or they begin with Genesis and pry open the creation account just wide enough to let in a little bit of evolution By contrast Stephen Webb provides a theory of how evolution and theology fit together and he argues that this kind of theory is required by the internal demands of both theology and biology The Dome of Eden also develops a theological account of evolution that is distinct from the intelligent design movement Webb shows how intelligent design properly discerns the inescapable dimension of purpose in nature but like Darwinism itself fails to make sense of the problem of natural evil Finally this book draws on the work of Karl Barth to advance a new reading of the Genesis narrative and the theology of Duns Scotus to provide the necessary metaphysical foundation for evolutionary thought
