Charge and Exciton Transport through Molecular
Wires Laurens D. A. Siebbeles, Ferdinand C. Grozema, 2011-07-18 As functional elements in opto electronic devices approach the single molecule limit conducting organic molecular wires are the appropriate interconnects that enable transport of charges and charge like particles such as excitons within the device Reproducible syntheses and a thorough understanding of the underlying principles are therefore indispensable for applications like even smaller transistors molecular machines and light harvesting materials Bringing together experiment and theory to enable applications in real life devices this handbook and ready reference provides essential information on how to control and direct charge transport Readers can therefore obtain a balanced view of charge and exciton transport covering characterization techniques such as spectroscopy and current measurements together with quantitative models Researchers are thus able to improve the performance of newly developed devices while an additional overview of synthesis methods highlights ways of producing different organic wires Written with the following market in mind chemists molecular physicists materials scientists and electrical engineers

Chalcogenocarboxylic Acid Derivatives S.-I. Fujiwara, 2005-04-07 Chalcogenocarboxylic acid derivatives are a large class of compounds including more than one chalcogenocarboxyl group in which one or two oxygen atoms of the carboxyl group are replaced with sulfur selenium or tellurium atoms The chemistry of metal chalcogenocarboxylates has not been explored extensively as that of carboxylates and dithiocarbamates This volume presents a comprehensive overview of the syntheses and their limitations structures and reactions of chalcogenocarboxylic acid derivatives by emphasizing the developments in organic and inorganic chalcogen chemistry over the last 5 to 20 years
