An Insecure Forecast for Continuity of Climate and Weather Data United States. Congress. House. Committee on Science and Technology (2007). Subcommittee on Energy and Environment, 2008 Microwave Remote Sensing for Oceanographic and Marine Weather-Forecast Models Robin A. Vaughan, 2012-12-06 The power of microwave remote sensing for studying the oceans of the world was demonstrated conclusively by the SEASAT mission in 1978 Since then no further satellite flown instruments have been available to provide further data of this type However the proposed launch of ESA s ERS 1 satellite will lead to a new set of active microwave instruments being flown in space in 1990 Even though similar data has been obtained from aircraft flown instruments SAR scatterometers altimeters etc a great deal of activity has been taking place to develop the necessary expertise in handling and analysing such data when it comes on stream from ERS 1 and from subsequent satellites It was against this background that the scientific Affairs Division of NATO again agreed to sponsor an ASI in Dundee in 1988 Its purpose was to review existing knowledge of the extraction of marine and atmospheric geophysical parameters from satellite gathered microwave data and to enable scientists to prepare themselves and their computing systems to utilise the new data when it becomes available The importance of the data is largely as input parameters to assist in the fitting of boundary conditions in large computer models The course was concerned more with the non imaging instruments that is with passive radiometers altimeters and scatterometers than with the imaging synthetic aperture radar

Thus the authors have tried to be as generic as possible when describing aspects of numerical model design and formulation Despite the reliance on NWP the human forecaster still has a big part to play in producing weather forecasts and this is described along with the issue of forecast verification how forecast centres measure their own performance and improve upon it Advanced undergraduates and postgraduate students will use this book to understand how the theory comes together in the day to day applications of weather forecast production In addition professional weather forecasting practitioners professional users of weather forecasts and trainers will all find this new member of the RMetS Advancing Weather and Climate series a valuable tool Provides an end to end description of the weather forecasting process Clearly structured and pitched at an accessible level the book discusses the practical choices that operational forecasting centres have to make in terms of what numerical models they use and when they are run Takes a very practical approach using real life case studies to contextualize information Discusses the latest advances in the area
