Mr Franklin A Selection Of His Personal:

Polynomials, Dynamics, and Choice Scott Crass, 2022-08-23 Working out solutions to polynomial equations is a mathematical problem that dates from antiquity Galois developed a theory in which the obstacle to solving a polynomial equation is an associated collection of symmetries Obtaining a root requires breaking that symmetry When the degree of an equation is at least five Galois Theory established that there is no formula for the solutions like those found in lower degree cases However this negative result doesn't mean that the practice of equation solving ends In a recent breakthrough Doyle and McMullen devised a solution to the fifth degree equation that uses geometry algebra and dynamics to exploit icosahedral symmetry *Polynomials Dynamics and Choice* The Price We Pay for Symmetry is organized in two parts the first of which develops an account of polynomial symmetry that relies on considerations of algebra and geometry The second explores beyond polynomials to spaces consisting of choices ranging from mundane decisions to evolutionary algorithms that search for optimal outcomes The two algorithms in Part I provide frameworks that capture structural issues that can arise in deliberative settings While decision making has been approached in mathematical terms the novelty here is in the use of equation solving algorithms to illuminate such problems Features Treats the topic familiar to many of solving polynomial equations in a way that's dramatically different from what they saw in school Accessible to a general audience with limited mathematical background Abundant diagrams and graphics

The Elements of Choice Eric J. Johnson, 2022-10-11 A leader in decision making research reveals how choices are designed and why it's so important to understand their inner workings Every time we make a choice our minds go through an elaborate process most of us never even notice We're influenced by subtle aspects of the way the choice is presented that often make the difference between a good decision and a bad one How do we overcome the common faults in our decision making and enable better choices in any situation The answer lies in more conscious and intentional decision design Going well beyond the familiar concepts of nudges and defaults *The Elements of Choice* offers a comprehensive systematic guide to creating effective choice architectures the environments in which we make decisions The designers of decisions need to consider all the elements involved in presenting a choice how many options to offer how to present those options how to account for our natural cognitive shortcuts and much more These levers are unappreciated and we're often unaware of just how much they influence our reasoning every day Eric J Johnson is the lead researcher behind some of the most well known and cited research on decision making He draws on his original studies and extensive work in business and public policy and synthesizes the latest research in the field to reveal how the structure of choices affects outcomes We are all choice architects for ourselves and for others Whether you're helping students choose the right school helping patients pick the best health insurance plan or deciding how to invest for your own retirement this book provides the tools you need to guide anyone to the decision that's right for them

A Rulebook for Decision Making George Pullman, 2015-03-05 Pullman offers his readers essential insights into how humans reason and make decisions Both

concise and far reaching his work teaches us how to challenge intuitive logic and examine the processes for deliberative reasoning This text will prove foundational for students in their intellectual journey toward the development of real skills in critical thinking By pointing to simple yet profound examples Pullman s text is both readable and provocative as it challenges us to consider the very mechanisms by which we understand our own cognitive biases Bradley A Hammer Department of English and Comparative Literature University of North Carolina Chapel Hill *The Future Loves You* Dr Ariel

Zelevnikow-Johnston,2024-11-28 A brilliant young neuroscientist explains how to preserve our minds indefinitely enabling future generations to choose to revive us Just as surgeons once believed pain was good for their patients some argue today that death brings meaning to life But given humans rarely live beyond a century even while certain whales can thrive for over two hundred years it s hard not to see our biological limits as profoundly unfair No wonder then that most people nearing death wish they still had more time Yet with ever advancing science will the ends of our lives always loom so close For from ventilators to brain implants modern medicine has been blurring what it means to die In a lucid synthesis of current neuroscientific thinking Zelevnikow Johnston explains that death is no longer the loss of heartbeat or breath but of personal identity that the core of our identities is our minds and that our minds are encoded in the structure of our brains On this basis he explores how recently invented brain preservation techniques now offer us all the chance of preserving our minds to enable our future revival Whether they fought for justice or cured diseases we are grateful to those of our ancestors who helped craft a kinder world yet they cannot enjoy the fruits of the civilization they helped build But if we work together to create a better future for our own descendants we may even have the chance to live in it Because should we succeed then just maybe the future will love us enough to bring us back and share their world with us **Benjamin Franklin** Christopher
