Our Ice Is Vanishing / Sikuvut Nunguliqtuq Shelley Wright, 2014-09-01 The Arctic is ruled by ice For Inuit it is a highway a hunting ground and the platform on which life is lived While the international community argues about sovereignty security and resource development at the top of the world the Inuit remind us that they are the original inhabitants of this magnificent place and that it is undergoing a dangerous transformation The Arctic ice is melting at an alarming rate and Inuit have become the direct witnesses and messengers of climate change Through an examination of Inuit history and culture alongside the experiences of newcomers to the Arctic seeking land wealth adventure and power *Our Ice Is Vanishing* describes the legacies of exploration intervention and resilience Combining scientific and legal information with political and individual perspectives Shelley Wright follows the history of the Canadian presence in the Arctic and shares her own journey in recollections and photographs presenting the far North as few people have seen it Climate change is redrawing the boundaries of what Inuit and non Inuit have learned to expect from our world *Our Ice Is Vanishing* demonstrates that we must engage with the knowledge of the Inuit in order to understand and negotiate issues of climate change and sovereignty claims in the region

We Are Amphibians R. S. Deese, 2014-11-24 *We Are Amphibians* tells the fascinating story of two brothers who changed the way we think about the future of our species As a pioneering biologist and conservationist Julian Huxley helped advance the modern synthesis in evolutionary biology and played a pivotal role in founding UNESCO and the World Wildlife Fund His argument that we must accept responsibility for our future evolution as a species has attracted a growing number of scientists and intellectuals who embrace the concept of Transhumanism that he first outlined in the 1950s Although Aldous Huxley is most widely known for his dystopian novel *Brave New World* his writings on religion ecology and human consciousness were powerful catalysts for the environmental and human potential movements that grew rapidly in the second half of the twentieth century While they often disagreed about the role of science and technology in human progress Julian and Aldous Huxley both believed that the future of our species depends on a saner set of relations with each other and with our environment Their common concern for ecology has given their ideas about the future of *Homo sapiens* an enduring resonance in the twenty first century The amphibian metaphor that both brothers used to describe humanity highlights not only the complexity and mutability of our species but also our ecologically precarious situation

[Environmental Winds](#) Michael J. Hathaway, 2013-07-26

Environmental Winds challenges the notion that globalized social formations emerged solely in the Global North prior to impacting the Global South. Instead, such formations have been constituted, transformed, and propelled through diverse site-specific social interactions that complicate and defy divisions between global and local. The book brings the reader into the lives of Chinese scientists, officials, villagers, and expatriate conservationists who were caught up in environmental trends over the past 25 years. Hathaway reveals how global environmentalism has been enacted and altered in China, often with unanticipated effects such as the rise of indigenous rights or the reconfiguration of human-animal relationships fostering what rural villagers refer to as the revenge of wild elephants.

Taking the Bite Out of Rabies David John Gregory, Rowland Tinline, 2020-07-09. Involved in rabies research for much of their working careers, editors David J. Gregory and Rowland R. Tinline explore Canada's unique contributions to rabies management in *Taking the Bite Out of Rabies*. By placing the major players in rabies management from provincial and federal agencies, universities, and research institutions in historical context, Gregory and Tinline trace Canada's largely successful efforts to control rabies. Concerned about the loss of institutional memory that tends to follow success, Gregory and Tinline view this book as a crucial way to collate, verify, and preserve records for future understanding and research. The book maps the history of rabies across Canada and explores the science, organization, research, and development behind Canada's public health and wildlife vaccination programs. It also discusses how ongoing changes in agency mandates, the environment, and the evolution of the rabies virus affect present and future prevention and control efforts.

A Primate Model for the Study of Colitis and Colonic Carcinoma: The Cotton-Top Tamarin (*Saguinus oedipus*) Neal K. Clapp, 2018-01-18. *A Primate Model for the Study of Colitis and Colonic Carcinoma* describes recent observations of the prevalence, pathogenesis, natural history, and time course of idiopathic colitis and colonic carcinoma in the Cotton Top Tamarin (CTT) model. Results of colonoscopy and mucosal biopsy are shown to evaluate the therapeutic efficacy of new anti-colitic agents. The contributions of antigenic profiles as a function of disease state, occurrence of extra-intestinal manifestations, and possible causal agents of colitis are also discussed. Prevalence of spontaneous CTT colonic carcinoma is considered from genetic influence, promotion by colitis, and through the use of diagnostic and prognostic tools such as flow cytometry. Changes in fecal steroids, serum markers, colonic glycoprotein, polyamine metabolism, and immunobiology of CTTs are discussed in regard to disease condition. The book is an essential reference on the CTT model for gastroenterologists, oncologists, and all researchers interested in digestive diseases.
