Pathogenic And Non Pathogenic Amoebae:

Pathogenic and Non-pathogenic Amoebae Baij Nath Singh, 1975 *Surgical Pathology of the Gastrointestinal System: Bacterial, Fungal, Viral, and Parasitic Infections* Laura W. Lamps, 2011-04-08

Surgical Pathology of the Gastrointestinal System Bacterial Fungal Viral and Parasitic Infections provides a unique diagnostic reference text for the pathologic diagnosis of infectious diseases of the gastrointestinal tract. Written for the practicing surgical pathologist, this text combines the superior illustrations of an atlas with carefully written prose to create a useful diagnostic companion. The text is divided into four sections covering bacterial, fungal, viral, and parasitic infections of the gastrointestinal tract. The descriptive sections of each chapter are organized into short paragraphs for easy reference and include the use of tables to compare and contrast organisms and summarize differential diagnoses. Each chapter is extensively illustrated and contains prose discussions of diagnostic features, differential diagnoses, brief clinical descriptions, and ancillary tests that help confirm the diagnosis. Immunohistochemistry, special histochemical stains, and molecular diagnostic techniques are included. *Surgical Pathology of the Gastrointestinal System Bacterial Fungal Viral and Parasitic Infections* provides pertinent clinical, diagnostic, and epidemiologic information that will be valuable to the practicing surgical pathologist. This volume will also help surgical pathologists gain familiarity with other contributory laboratory tests that are available to help confirm diagnosis.

The Cell Biology of Protist Parasite-Host Interfaces Carmen Faso, Adrian Hehl, 2022-04-28 *New advances in the biology and pathogenesis of free-living amoebae* Isabel Marcelino, Ascel Samba-Louaka, Christopher A. Rice, 2024-05-06

Free-living amoebae (FLA) are fascinating unicellular eukaryotes living freely in soil and freshwater habitats and feeding mainly on bacteria. Under stressful conditions, they can transform from a motile, metabolically active, and replicative trophozoite to a dormant and resistant cyst. Some FLA can be pathogenic to humans, such as *Acanthamoeba*, *Balamuthia*, *Naegleria*, and *Sappinia*, causing rare but fatal infections in humans. FLA are also known to be carriers of pathogenic microorganisms, but few data are currently available on the natural bacteria of FLA and how various bacteria avoid phagocytosis and predation by these specific types of amoebae. There is an imperative need to draw more attention to this group of microorganisms, and for this, we seek submissions that address advancements in the biology and pathogenesis of FLAs.
