Advances and Personalized Management is your definitive guide to understanding addressing and advancing the field of lipid disorders in cardiovascular health *Novel insights into the pathophysiology of diabetesrelated complications: implications for improved therapeutic strategies, volume II* Jian Ma, Chunjie Jiang, Xuebin Fu, 2025-04-30 Given that Volume I of the topic Novel Insights into the Pathophysiology of Diabetes related Complications Implications for Improved Therapeutic Strategies has been successfully performed last year and we have received submissions talking about diabetic retinopathy DR diabetic neuropathy DN type 2 diabetes mellitus T2DM associated periodontitis diabetic oxidative liver damage diabetic related wound healing etc We are pleased to announce the launch of Volume II Diabetes mellitus DM as a major health problem has been highly prevalent across the globe It is increasingly apparent that not only a cure for the current worldwide diabetes epidemic is required but also a cure for its major complications including heart disease chronic kidney disease and nerve damage In addition other problems with feet oral health vision hearing reproduction and mental health need to be explored as well Understanding the underlying mechanisms of these diabetic complications would be helpful to prevent or delay the occurrence of complications and to improve the overall health condition of people with DM Unfortunately current therapies only slow down disease deterioration of most prevalent diabetic complications Indeed whether the mechanisms in diabetic complications are protective or pathological remains not fully defined based on the impacts during the underlying disease process Thus we welcome academic articles that can provide the latest insights into the pathophysiology of diabetes related complications These submissions range from uncovering the intracellular signaling pathways with the development of diabetic complications to exploring the possible role of genetic issues metabolic regulation and inflammation mechanisms We welcome high quality Original Research and Review articles that contribute to the mechanism investigation of a range of diabetic complications including but not limited to Microvascular damage related diseases in diabetic patients such as neuropathy nephropathy and retinopathy Foot damage and skin problems in diabetes Reproductive disorder in diabetic women The relationship between diabetes and the development of Alzheimer s disease depression and cognitive impairment In this continued Volume II we are looking forward to seeing many more academic articles on DM related heart disease a reproductive disorder in diabetic women or the relationship between diabetes and the development of Alzheimer s disease etc Also Methods articles that introduce novel experimental methods or animal models that contribute to understanding the formation and progress of diabetic complications are continually welcome Opinions or Perspectives regarding the implications of new research on the treatment of diabetic complications are encouraged too *Molecular and Cellular Mechanisms of Heart Failure: Pathophysiology, pathogenesis and therapeutics* Kenneth Scott Campbell, Amy Li, Sean Lal, 2023-09-06 **Pathophysiology and Rational Pharmacotherapy of Myocardial Ischemia** G. Heusch, 2013-06-29 Ischemic heart disease is still the most frequent cause of death in the western world There have been significant achievements in diagnostic procedures as well as in the medical invasive and surgical treatment of ischemic heart disease

in recent years A variety of drugs are available for the pharmacotherapy of ischemic heart disease particularly nitrates blockers and calcium antagonists which are used as mono therapy or in various combinations However the selection of patients for a certain treatment as well as the optimization of an individual treatment are still largely empirical On the other hand the recent advances in experimental cardiology emphasize the extremely complex and dynamic scenario of ischemic heart disease involving endothelial damage coagulation processes metabolic and morphologic derangements coronary constrictor mechanisms blood flow redistribution arrhythmogenesis contractile dysfunction during ischemia and reperfusion and finally lack or presence of pain perception Therefore it appears desirable to close the gap between experimental and clinical cardiology and thus to provide a pathophysiologic basis for rational clinical decisions with respect to diagnostic and therapeutic procedures The idea for this book arose during the preparation of a seminar series on experimental cardiology when I found it difficult to collect the pertinent information from textbooks of cardiology physiology pathology and pharmacology as well as from numerous review and original articles on specific topics I am now very grateful that expert clinical and experimental colleagues from around the world have joined me in the effort to provide a comprehensive textbook on the pathophysiology of myocardial ischemia and its rational pharmacotherapy
