

A Patient's Guide to Getting Medicine Through a Feeding Tube

Getting the nutrition you need through a feeding tube can improve quality of life. Frequently, the tube is also used for giving medicine. Here are some general tips and specific information about a few common medicines that you may find helpful. You should consult your pharmacist, physician, dietitian or nurse for specific information about the medication that you take.

Giving medications through feeding tube

- Medicines may clog a feeding tube. Follow these guidelines to decrease the chance of a clog and to get the most benefit from your medicine.
- Use a syringe to give diluted medications through the feeding tube.
- Never mix medication with tube feeding formula.
- Never mix medications together unless your doctor advises you differently.
- Do not crush time-released medications or enteric-coated medications. The letters CD, CR, CRT, LA, SA, SR, TR, XL, or XR usually indicate time release medications. The words Chronotab, Duratab, Extentab, Gradumet, Repetab, Sequel, Spansule, Tembidi, Timexcap, or Timespan also indicate time release. The letters EC stands for enteric coated.
- Only some sublingual medicine, medicine that is absorbed from the cheeks or lozenge type medicine may be suitable to go through a feeding tube, check first.
- Ask your doctor where the tip of the feeding tube resides. This is important for drug administration. The stomach can tolerate more drugs than areas in the intestine, jejunum or duodenum.
- Use liquid medications when possible, but these may need to be diluted (1 part medicine to 4–5 parts water) before infusing to avoid stomach upset or diarrhea. If the tip of the tube is past the stomach, dilute with 8 to 10 parts water.
- Many liquid medications are thick and cling to feeding tube walls. Rinse well before and after to prevent this from happening.
- Crush tablets to a fine powder and mix well in 10 to 15 ml of warm water. If the tip of the tube is past the stomach, dilute with 20 to 30 ml of water. Let the mixture sit for two minutes prior to putting it down the tube and mix again before giving the medicine.
- Clear feeding tube by rinsing with 1–2 Tablespoonfuls (20 to 30ml) of warm water before and after each medication.
- Ask your doctor or pharmacist if the medication needs to be given on a full or empty stomach. This is only important if you are giving yourself tube feedings several times a day using a syringe as a funnel (bolus). Then consider the tube feeding to be a meal.

TAKE THE FOLLOWING MEDICATION AT THE SAME TIME AS A FOOD BOLUS.

Advil	Cytotec	Flexorol
Naproxyn	Sinemet	Tidid
Vasid	Aspirin	Feldene
Mezrit	Potassium	Stenopa

The Patient's Guide to Preventing Medical Errors Karin J. Berntsen, 2004-10-30 A nation watched in horror as 17 year old Jessica Santillian died needlessly after a heart lung transplant in 2003 She had been given organs with the wrong blood type That error killed her It is just one among tens of thousands of less publicized errors that occur in U S hospitals each year Author Karin Berntsen a veteran of the hospital and health care industry takes us through the headlines and the events never publicized into hospital wards and surgical rooms to see how errors are made causing disability or death She gives graphic examples of actual events that illustrate the problems cited in a federal Institute of Medicine report showing medical errors in the hospital cause 44 000 to 98 000 deaths each year Those errors include medication mistakes wrong site or side surgery and botched transfusions Berntsen explains why these are not just human errors with one or two people responsible they are systems failures that require a major culture change to remedy And that change she argues may not come without action by the very people the medical system is designed to help patients She offers clear actions consumers can take to assure they are not on the receiving end of a medical error The book details over 200 tips for improving patient safety U S hospitals have countless stories of miraculous healing and recovery the greatest technology most advanced medicines and best research in the world On the other hand we have a system where medical errors bring more than 120 fatalities each day across the country in hospitals An airline crash causing that many

deaths daily would paralyze that industry But because the deaths and harm are diluted across and deep within the silence of hospitals it is easier to be complacent There is says Berntsen an urgent need to pause and take inventory a need for clinicians and consumers to come together as partners for change
