Pattern Biology And The Complex Architectures Of Life:

Pattern Biology and the Complex Architectures of Life Michael Jay Katz, 1988 Pattern Biology and the Complex Architectures of Life Michael Jay Katz, 1988 Homoplasy Michael J. Sanderson, Larry Hufford, 1996-10-21 Why do unrelated organisms sometimes appear almost identical in details of the anatomy behavior physiology and ecology Homoplasy assembles leaders in evolutionary biology to explore issues of parallelism convergence and reversals This innovative book is certain to provoke discussion of homoplasy compelling evidence for particular theories of evolutionary change The first book on this increasingly interesting subject Includes authoritative treatments from leading experts expressing a variety of viewpoints **Design Patterns and Living Architecture** Nikos A. Salingaros, 2017-07-25 *From Life to Architecture, to Life* Tim Ireland, 2024-01-18 The book establishes a correlation between architectural theory and the biosemiotic project and suggest how this coupling establishes a framework leading to an architectural biosemiotic paradigm that puts biosemiotic theory at the heart of cognising the built environment and offers an approach to understanding and shaping the built environment that supports and benefits human and organismic spatial intelligence **Toward a Living Architecture?** Christina Cogdell, 2019-01-01 A bold and unprecedented look at a cutting edge movement in architecture Toward a Living Architecture is the first book length critique of the emerging field of generative architecture and its nexus with computation biology and complexity Starting from the assertion that we should take generative architects rhetoric of biology and sustainability seriously Christina Cogdell examines their claims from the standpoints of the sciences they draw on complex systems theory evolutionary theory genetics and epigenetics and synthetic biology She reveals significant disconnects while also pointing to approaches and projects with significant potential for further development Arguing that architectural design today often only masquerades as sustainable Cogdell demonstrates how the language of some cutting edge practitioners and educators can mislead students and clients into thinking they are getting something biological when they are not In a narrative that moves from the computational toward the biological and from current practice to visionary futures Cogdell uses life cycle analysis as a baseline for parsing the material energetic and pollution differences between different digital and biological design and construction approaches Contrary to green tech sustainability advocates she questions whether quartzite based silicon technologies and their reliance on rare earth metals as currently designed are sustainable for much longer challenging common projections of a computationally designed and manufactured future Moreover in critiquing contemporary architecture and science from a historical vantage point she reveals the similarities between eugenic design of the 1930s and the aims of some generative architects and engineering synthetic biologists today Each chapter addresses a current architectural school or program while also exploring a distinct aspect of the corresponding scientific language theory or practice No other book critiques generative architecture by evaluating its scientific rhetoric and disjunction from actual scientific theory and practice Based on the author s years of field research in architecture studios and biological labs this

rare field building book does no less than definitively unsparingly explain the role of the natural sciences within contemporary architecture

Architecture Follows Nature-Biomimetic Principles for Innovative Design Ilaria Mazzoleni,2013-03-21 This full color volume proposes an innovative methodology that uses the functional aspects of nature to inspire improvements in building design and form encouraging designers to apply biomimetic principles to architectural processes The book focuses on the analysis of various animal skins translating the principles of communication thermoregulation water balance and protection into the built environment Illustrating how biomimetic principles can create a more sustainable way of building this is the first time the author s new methodology as well as the 12 case studies has been published

The Routledge Companion to Biology in Art and Architecture Charissa Terranova,Meredith Tromble,2016-08-12 The Routledge Companion to Biology in Art and Architecture collects thirty essays from a transdisciplinary array of experts on biology in art and architecture The book presents a diversity of hybrid art and science

thinking revealing how science and culture are interwoven The book situates bioart and bioarchitecture within an expanded field of biology in art architecture and design It proposes an emergent field of biocreativity and outlines its historical and theoretical foundations from the perspective of artists architects designers scientists historians and theoreticians Includes over 150 black and white images

Soft Living Architecture Rachel Armstrong, 2018-09-06 Soft Living Architecture explores the invention of new architectures based on living processes It crafts a unique intersection between two fast developing disciplines biomimicry and biodesign in architecture and bioinformatics and natural computing in the natural sciences This is the first book to examine both the theory and methodology of architecture and design working directly with the natural world It explores a range of approaches from the use of life like systems in building design to the employment of actual growing and living cell and tissue cultures as architectural materials creating architecture that can change learn and grow with us The use of living architecture is cutting edge and speculative yet it is also inspiring a growing number of designers worldwide to adopt alternative perspectives on sustainability and environmental design The book examines the ethical and theoretical issues arising alongside case studies of experimental practice to explore what we mean by natural in the Anthropocene and raise deep questions about the nature of design and the design of nature This provocative and at times controversial book shows why it will become ever more necessary to embrace living processes in architecture if we are to thrive in a sustainable future
