Eysenck, 2017-01-31 International Series of Monographs on Experimental Psychology Volume 1 Pavlov's Typology presents problems of personality and the theoretical framework done in the U S S R Part 1 of this book deals with the development of Pavlov's theory of personality on experiments conducted on dogs and the problems encountered in studies of higher nervous activity in man and animals These tests include investigation into the capacity of cortical cells of the test subject the speed of movement and termination of the nervous process and the speed of formation of positive and negative conditioned connections Part 2 is the application of Pavlov's theory of types to individual differences in human beings This part emphasizes that when using data from Pavlov's studies of animals typological differences are considered when applied in man that experimental methods are to be improved and that operations definitions and concepts can change Part 3 concerns experiments from Pavlov's laboratory on the dimension of strength of the nervous systems in human beings This strength is shown from the working capacity of nerve cells as 1 the strength of excitation the nerve cell can endure when a stimulus acts on it in a single time and 2 the time that the nerve cell can endure prolonged stimulus or at shorter but frequent intervals The conclusions observed in strong subjects and weak subjects are then analyzed This book can be appreciated by psychiatrists psychologists behavioral scientists and students and professors in psychology

The Spiral After-Effect Harry C. Holland, 2016-07-29 The Spiral After Effect presents the visual phenomenon of the spiral after effect in clinical investigations This book explains how and under what conditions the illusion happens or can be modified Organized into eight chapters this book begins with an overview of the features of illusion that are similar to many of the characteristics of other movement perceptions including vividness velocity and persistence This text then examines the complex structure and the geometric function of the inducing stimulus Other chapters consider the effects of drugs on the spiral illusion which is rather strange when one considers the wide use of the phenomenon in patient groups who may be receiving substantial admixtures of compound for therapeutic purposes This book discusses as well the relationship between intelligence and perception of the spiral after effect The final chapter deals with the conditioned after effect Clinical psychologists and readers who are interested in personality research will find this book useful

Putting Psychology in Its Place Graham Richards, 2002 Graham Richards gives historical perspective to key issues in contemporary psychology such as psychology and women and psychology and race as well as more traditional topics like behaviourism and Gestalt psychology From publisher's description

Foundations of Personality P.J. Hettema, Ian J. Deary, 2013-11-11 Differences between people are a fascinating and long standing area of psychological inquiry However previous research has largely been confined to studies at the descriptive level This book tries to explain individual difference rather than merely describe them Explanations are derived from two major competing frameworks the biological and social approaches to individuality The book is based on the contributions of specialists from Europe and North America invited to represent the biological and social points of view Thus a direct confrontation is obtained of two

approaches that hitherto have proceeded with virtually no reference to each other Attention is paid to behavior genetics psychophysiology and temperament as well as to social learning behavioral strategies and person environment interactions Differences and commonalities between the biological and social approaches are scrutinized and a common framework is outlined to stimulate future research Due to its innovative character the book is particularly relevant for investigators in the field In addition it may be fruitfully used in advanced graduate level courses in personality psychology

Inside Psychology Patrick Rabbitt, 2009 Psychology is a young science It has made great strides over the past 100 or so years to become one of the most rapidly growing of the sciences This text brings together some of the most influential psychologists from the past 50 years to consider just how we got to where we are in psychology and where we might be heading

Dog Behaviour, Evolution, and Cognition Adam Miklosi, 2014-12-11 This is the first book to collate and synthesize the recent burgeoning primary research literature on dog behaviour evolution and cognition The author presents a new ecological approach to the understanding of dog behaviour demonstrating how dogs can be the subject of rigorous and productive scientific study without the need to confine them to a laboratory environment This second fully updated edition of Dog Behaviour Evolution and Cognition starts with an overview of the conceptual and methodological issues associated with the study of the dog followed by a brief description of their role in human society An evolutionary perspective is then introduced with a summary of current research into the process of domestication The central part of the book is devoted to issues relating to the cognitive aspects of behaviour which have received particular attention in recent years from both psychologists and ethologists The book's final chapters introduce the reader to many novel approaches to dog behaviour set in the context of behavioural development and genetics This second edition recognises and discusses the fact that dogs are increasingly being used as model organisms for studying aspects of human biology such as genetic diseases and ageing Specific attention is also given in this edition to attachment behaviour which emerges between humans and dogs the importance of inter specific communication in the success of dogs in human communities and the broad aspects of social cognition and how this may contribute to human dog cooperation Directions for future research are highlighted throughout the text which also incorporates links to human and primate research by drawing on homologies and analogies in both evolution and behaviour The book will therefore be of relevance and use to anyone with an interest in behavioural ecology including graduate students of animal behaviour and cognition as well as a more general audience of dog enthusiasts biologists psychologists veterinarians and sociologists
