Formal Modelling in Electronic Commerce Steven O. Kimbrough, Dongjun Wu, 2006-01-17 Advances in automation for electronic commerce require improved understanding and formalization of the objects processes and policies of commerce itself These include business objects such as bills of lading and contracts processes such as workflows and trade procedures and policies covering such problems as contract or procedure validation and strategic behaviour This book is about theory formalization and proof of concept implementation of these and related matters In addition to presenting state of the art results the book places this work in the context of nearly twenty years of developments in formal modelling for electronic commerce A comprehensive bibliography and index are provided *Trust and Deception in Virtual Societies* Cristiano

Castelfranchi, Yao-Hua Tan, 2013-03-09 One of the major problems in the development of virtual societies in particular in electronic commerce and computer mediated interactions in organizations is trust and deception This book provides analyses by various researchers of the different types of trust that are needed for various tasks such as facilitating on line collaboration building virtual communities and network organizations and even the design of effective and user friendly human computer interfaces The book has a multi disciplinary character providing theoretical models of trust and deception empirical studies and practical solutions for creating trust in electronic commerce and multi agent systems *Formal*

Aspects in Security and Trust Theo Dimitrakos, Fabio Martinelli, Peter Y.A. Ryan, Steve Schneider, 2006-02-27 This book constitutes the thoroughly refereed post proceedings of the Third International Workshop on Formal Aspects in Security and Trust FAST 2005 held in Newcastle upon Tyne UK in July 2005 The 17 revised papers presented together with the extended abstract of one invited paper were carefully reviewed and selected from 37 submissions The papers focus on formal aspects in security and trust policy models and many other topics *Theory of Legal Science* Aleksander Peczenik, L. Lindahl, G.C.

van Roermund, 2012-12-06 Proceedings of the Conference on Legal Theory and Philosophy of Science Lund Sweden December 11 14 1983 **Norms, Logics and Information Systems** Paul McNamara, Henry Prakken, 1999 This book

presents research in an interdisciplinary field resulting from the vigorous and fruitful cross pollination between traditional deontic logic and computer science AI researchers have used deontic logic as one of the tools in modelling legal reasoning Computer scientists have discovered that computer systems including their interaction with other computer systems and with human agents can often be productively modelled as norm governed So for example deontic logic has been applied by computer scientists for specifying bureaucratic systems access and security policies and soft design or integrity constraints and for modelling fault tolerance In turn computer scientists and AI researchers have also discovered and made it clear to the rest of us that various formal tools e g nonmonotonic temporal and dynamic logics developed in computer science and artificial intelligence have interesting applications to traditional issues in deontic logic This volume presents some of the best work done in this area with the selection at once reflecting the general interdisciplinary and international character that this

area of research has taken on as well as reflecting the more specific recent inter disciplinary developments between traditional deontic logic and computer science

Theories of Rights C.L. Ten, 2017-05-15 To those who invoke them rights are powerful instruments for settling arguments in favour of the right holders But the nature provenance and justification of rights are uncertain and disputed and there are doubts about whether rights should play a distinctive and fundamental role in moral and political discourse More recent disagreements have centred on group rights and on whether rights have a universal application across different cultures and moral traditions These and other related issues are explored in depth by the essays in this volume which are mostly drawn from a wide range of journals in philosophy politics and law

Agents and Computational Autonomy Matthias Nickles, Michael Rovatsos, Gerhard Weiß, 2004-08-05 This volume contains the postproceedings of the 1st International Workshop on Computational Autonomy Potential Risks Solutions AUTONOMY 2003 held at the 2nd International Joint Conference on Autonomous Agents and Multi agent Systems AAMAS2003 July 14 2003 Melbourne Australia Apart from revised versions of the accepted workshop papers we have included invited contributions from leading experts in the field With this the present volume represents the first comprehensive survey of the state of the art of research on autonomy capturing different theories of autonomy perspectives on autonomy in different kinds of agent based systems and practical approaches to dealing with agent autonomy Agent orientation refers to a software development perspective that has evolved in the past 25 years in the fields of computational agents and multiagent systems The basic notion underlying this perspective is that of a computational agent that is an entity whose behavior deserves to be called executable social and autonomous As an autonomous entity an agent possesses action choice and is at least to some extent capable of deciding and acting under self control Through its emphasis on autonomy agent orientation significantly differs from traditional engineering perspectives such as structure orientation or object orientation These perspectives are targeted on the development of systems whose behavior is fully determined and controlled by external units e.g. by a programmer at design time and/or a user at run time and thus inherently fail to capture the notion of autonomy

Business Information Systems Workshops Witold Abramowicz, 2013-10-17 This book constitutes the refereed proceedings of the four workshops that were organized in conjunction with the International Conference on Business Information Systems BIS 2013 which took place in Poznań Poland in June 2013 BIS workshops give researchers the opportunity to share their preliminary ideas and first experimental results and to discuss research hypotheses with a highly focused audience The 25 papers in this volume were carefully reviewed and selected from 47 submissions and were revised and extended after the event The workshop topics covered applications and economics of knowledge based technologies AKTB business and IT alignment BITA enterprise systems for higher education ESHE and formal semantics for future enterprises FSFE In addition two keynotes as well as ten papers presented at the PhD Symposium are also included in this volume

Blameworthy Belief Nikolaj

Nottelmann,2007-07-18 Believing the wrong thing may sometimes have drastic consequences The question as to when a person is not only ill guided but genuinely at fault for holding a particular belief is an important one It touches upon the roots of our understanding of such notions as criminal negligence and moral responsibility The answer to this question may influence the extent to which we are willing to submit each other to punishments ranging from mild resentment to harsh prison terms This book presents an extensive effort to shed light on the conditions under which we may appropriately deem someone blameworthy for holding a particular belief It regiments and unifies several debates within contemporary epistemology ethics and legal scholarship Finally the book brings a new philosophical look on issues like our power to control beliefs and the extent and nature of foresight *Nominalism and Contemporary Nominalism* M. Gosselin,2012-12-06

Though the subject of this work nominalism and contemporary nominalism is philosophical it cannot be fully treated without relating it to data gathered from a great variety of domains such as biology and more especially ethology psychology linguistics and neurobiology The source of inspiration has been an academic work I wrote in order to obtain a postdoctoral degree which is called in Belgium an Aggregaat voor het Hoger Onderwijs comparable to a Habilitation in Germany I want to thank the National Fund of Scientific Research which accorded me several grants and thereby enabled me to write the academic work in the first place and thereafter this book I also want to thank Prof SJ Doorman Technical University of Delft and Prof G Nuchelmans University of Leiden who were members of the jury of the Aggregaatsthesis presented to the Free University of Brussels in 1981 and who by their criticisms and suggestions encouraged me to write the present book the core of which is constituted by the general ideas then formulated I am further obliged to Mr X the referee who was asked by Jaakko Hintikka to read my work and who made a series of constructive remarks and recommendations My colleague Marc De Mey University of Ghent helped me greatly with the more formal aspects of my work and spent too much of his valuable time and energy to enable me to deliver a presentable copy All remaining shortcomings are entirely my responsibility I asked Prof Expert Systems in Law Antonio Anselmo Martino,1992 Informatics is a cross roads of disciplines but it is also a forge for implementations that are transforming our society because they are transforming all forms of production Law is without a doubt a very important social application domain of informatics In the volume presented here legal knowledge is considered mainly from the lawyer's point of view while taking into account the implementation of expert systems It is a review of the best known theories of the representation of legal orders and systems in the light of the possibility of using more advanced computer tools A solution to the problem of how to represent legal knowledge in such a way that it can be used by the inference engine of an expert system for making calculations and arriving at consequences is also proposed New Perspectives on Cybernetics G. Vijver,2013-06-29 Gertrudis Van de Vijver Seminar of Logic and Epistemology University of Ghent Before being classified under the fashionable denominators of complexity and chaos self organization and autonomy were intensely inquired into in the cybernetic tradition Despite all rejections that cybernetics has gone through in the second

half of this century today its importance is more and more recognized Its decisive influence for connectionist theories autopoietic and constructivist theories for different forms of applied or experimental epistemology is being more and more understood and generally accepted It is mainly due to the success of connectionist models that we observe today a revival of interest for cybernetics The 1943 article by McCulloch and Pitts is evidently a founding article Cybernetics has however a much broader interest than the one linked to technical mathematical details relevant to the construction of networks For instance the evolution from first to second order cybernetics the ways of approaching biological and cognitive phenomena in the latter and the limits that were formulated there are particularly meaningful to understand current developments and divergences in connectionism A nuanced picture of cybernetic s history and its present state is therefore clearly

epistemologically essential *The Logic of Discovery* S. Kleiner,2013-03-09 Scientific research is viewed as a deliberate activity and the logic of discovery consists of strategies and arguments whereby the best objectives questions and optimal means for achieving these objectives heuristics are chosen This book includes a discussion and some proposals regarding the way the logic of questions can be applied to understanding scientific research and draws upon work in artificial intelligence in a discussion of heuristics and methods for appraising heuristics metaheuristics It also includes a discussion of a third source for scientific objectives and heuristics episodes and examplars from the history of science and the history of philosophy This book is written to be accessible to advanced students in philosophy and to the scientific community It is of interest to philosophers of science philosophers of biology historians of physics and historians of biology

Real Numbers, Generalizations of the Reals, and Theories of Continua P. Ehrlich,2013-06-29 Since their appearance in the late 19th century the Cantor Dedekind theory of real numbers and philosophy of the continuum have emerged as pillars of standard mathematical philosophy On the other hand this period also witnessed the emergence of a variety of alternative theories of real numbers and corresponding theories of continua as well as non Archimedean geometry non standard analysis and a number of important generalizations of the system of real numbers some of which have been described as arithmetic continua of one type or another With the exception of E W Hobson s essay which is concerned with the ideas of Cantor and Dedekind and their reception at the turn of the century the papers in the present collection are either concerned with or are contributions to the latter groups of studies All the contributors are outstanding authorities in their respective fields and the essays which are directed to historians and philosophers of mathematics as well as to mathematicians who are concerned with the foundations of their subject are preceded by a lengthy historical introduction *Books in Print* ,1993-09 V 1

Causality in Sociological Research Jakub Karpinski, 2012-12-06 The general treatment of problems connected with the causal conditioning of phenomena has traditionally been the domain of philosophy but when one examines the relationships taking place in the various fields the study of such conditionings belongs to the empirical sciences Sociology is no exception in that respect In that discipline we note a certain paradox Many problems connected with the causal conditioning of phenomena have been raised in sociology in relatively recent times and that process marked its empirical or even so called empiricist trend That trend labelled positivist seems in this case to be in contradiction with a certain type of positivism Those authors who describe positivism usually include the Humean tradition in its genealogy and remembering Hume's criticism of the concept of cause speak about positivism as about a trend which is inclined to treat lightly the study of causes and confines itself to the statements on co occurrence of phenomena
