Positivism Today:

Research Methods for Adult Educators in Africa Bagele Chilisa, Julia Preece, 2005 This book explores rationales for research methodologies embedded in African contexts Issues discussed include contexts for adult education research in Africa philosophical and theoretical foundations of inquiry philosophical perspectives and their implications for research doing a literature review getting started with a research proposal quantitative research designs and carrying out surveys summarising and analysing survey data the nature of qualitative research carrying out qualitative studies combining qualitative and quantitative methods research ethics action research feminist research approaches and writing up and disseminating research Historicism and Its Problems Ernst Troeltsch, 2024 In this volume Ernst Troeltsch embraces historical relativity while rejecting historical relativism and thereby provides a model for the philosophy of history The volume remains as relevant as it was in 1923 , *Indigenous Research Methodologies* Bagele Chilisa, 2019-11-04 Author Bagele Chilisa has revised and updated her groundbreaking textbook to give a new generation of scholars a crucial foundation in indigenous methods methodologies and epistemologies Addressing the increasing emphasis in the classroom and in the field to sensitize researchers and students to diverse perspectives especially those of women minority groups former colonized societies indigenous people historically oppressed communities and people with disabilities the second edition of *Indigenous Research Methodologies* situates research in a larger historical cultural and global context to make visible the specific methodologies that are commensurate with the transformative paradigm of social science research Chapters cover the history of research methods ethical conduct colonial and postcolonial epistemologies relational epistemologies emergent and indigenous methodologies Afrocentric research feminist research narrative frameworks interviewing and participatory methods New to the second edition are three new chapters covering evaluation mixed methods and mixed methods evaluation These chapters focusing on decolonizing indigenizing and integrating these methods and applications to enhance participation of indigenous peoples as knowers and foster collaborative relationships Additional information on indigenous quantitative research reflects new developments in the field New activities and web resources offer more depth and new ways for students to extend their knowledge This textbook includes features such as key points learning objectives student exercises chapter summaries and suggested readings making it an ideal textbook for graduate level courses *The Ivory Tower of Babel* David Demers, 2011 Mainstream social science has come under fierce criticism in recent decades for failing to have more impact on public policy Critics say the social sciences are incapable of generating knowledge that can solve social problems Others contend that partisan politics and university administrations are the problem Politicians are more concerned about special interests than scientific research and administrators care more about scholarly publications than solving social problems Are the social sciences failing to live up to their promises Have they outlived their usefulness Have they become an Ivory Tower of Babel Like the Babylonians who built the infamous Tower of

Babel social scientists for the past two centuries have been building a tower of sorts only this time it s composed of knowledge rather than bricks The primary goal of these scholars anthropologists communication scholars economists political scientists sociologists and social psychologists has been to solve problems of social integration The Babylonian tower was designed in part to unite people to one geographical area Similarly social scientists see their tower of knowledge as a means for solving social problems such as poverty crime drug abuse inequality unemployment abuse of power that alienate people and groups from modern society The Babylonians failed because of divine intervention according to the Bible The social scientists aren t finished building their tower But according to critics the results so far look less like a tower of knowledge for solving social problems than an Ivory Tower of Babel one in which social scientists routinely dispute each other s theories and data and even uncontested or well supported findings rarely influence public policy Disputes over the nature of truth and knowledge are so commonplace in the social sciences that many scholars believe a social science which uses methods from the natural sciences is incapable of generating knowledge that can solve social problems This book examines the history and philosophy of the social sciences and theoretical and empirical research on the impact of social science Suggestions are offered at the end for enhancing the impact of the social sciences A number of scientific articles and books have been written about the impact or lack thereof of the social sciences on public policy but none has been written specifically to appeal to both academics and a broader market composed of the general public and students in both undergraduate and graduate level courses The author takes the reader on a journey inside one of the best kept secrets in higher education that much if not most of the research conducted in the social sciences has very little impact on public policy or on solving social problems Are taxpayers getting their money s worth *Foundations of Qualitative Research* Jerry W. Willis,Muktha Jost,Rema Nilakanta,2007-02-02 *Foundations of Qualitative Research* introduces key theoretical and epistemological concepts replete with historical and current real world examples Author Jerry W Willis provides an invaluable resource to guide the critical and qualitative inquiry process written in an accessible and non intimidating style that brings these otherwise difficult concepts to life *Historicism* Herman Paul,Adriaan van Veldhuizen,2020-10-15 Throughout the twentieth century scholars artists and politicians have accused each other of historicism But what exactly did this mean Judging by existing scholarship the answers varied enormously Like many other isms historicism could mean nearly everything to the point of becoming meaningless Yet the questions remain What made generations of scholars throughout the humanities and social sciences worry about historicism Why did even musicians and members of parliament warn against historicism And what explains this remarkable career of the term across generations fields regions and languages Focusing on the travels that historicism made this volume uses historicism as a prism for exploring connections between disciplines and intellectual traditions usually studied in isolation from each other It shows how generations of sociologists theologians and historians tried to avoid pitfalls associated with historicism and explains why the term was

heavily charged with emotions like anxiety anger and worry While offering fresh interpretations of classic authors such as Friedrich Meinecke Karl L with and Leo Strauss this volume highlights how historicism took on new meanings connotations and emotional baggage in the course of its travels through time and place

The Function of Judicial Decision in European Economic Integration by Clarence J. Mann, 1972-07 The present generation lives in a time of transition The isolated national legal order the supreme idea of 19th Century legal science begins to be superseded by the evolution of a wider international and transnational net work of legal rules and conceptions With the recognition of a fundamental guarantee of human rights as a binding ingredient of the framework of inter national law the strict separation of the internal system of the states from the international community is transcended To this extent the rules of international law now exercise a direct influence upon the national legal order In some conventional arrangements safeguarding human rights the individual is given direct access to international protection against his own state The piercing of national borders by transnational norms finds its strongest expression in the formation of regional communities of states which seek to develop a common fund of legal rules concepts and principles among their members The leading role in this direction lies with European organizations In the Community formed by the signatories of the European Convention on Human Rights the members accept for themselves a stan dard of legal guarantees for fundamental rights of the individual laid down in the Convention The organs of the Convention including the Court and foremost the Commission fulfill their tasks by measuring the national laws of the member states against the basic requirements embodied in the Euro pean Convention

AI and Human Thought and Emotion Sam Freed, 2019-07-11 The field of artificial intelligence AI has grown dramatically in recent decades from niche expert systems to the current myriad of deep machine learning applications that include personal assistants natural language interfaces and medical financial and traffic management systems This boom in AI engineering masks the fact that all current AI systems are based on two fundamental ideas mathematics logic and statistics from the 19th century and a grossly simplified understanding of biology mainly neurons as

understood in 1943 This book explores other fundamental ideas that have the potential to make AI more anthropomorphic Most books on AI are technical and do not consider the humanities Most books in the humanities treat technology in a similar manner AI and Human Thought and Emotion however is about AI how academics researchers scientists and practitioners came to think about AI the way they do and how they can think about it afresh with a humanities based perspective The book walks a middle line to share insights between the humanities and technology It starts with philosophy and the history of ideas and goes all the way to usable algorithms Central to this work are the concepts of introspection which is how consciousness is viewed and consciousness which is accessible to humans as they reflect on their own experience The main argument of this book is that AI based on introspection and emotion can produce more human like AI To discover the connections among emotion introspection and AI the book travels far from technology into the humanities and then returns with concrete examples of new algorithms At times philosophical historical and technical this exploration of human emotion and thinking poses questions and provides answers about the future of AI
