Positron Scattering in Gases John W. Humberston, M.R.C. McDowell, 2012-12-06 The first conference in this series devoted principally to the interaction of positrons in gases was held at York University Toronto in July 1981 immediately preceding the XII ICPEAC in Gatlinburg and the proceedings were published in the Canadian Journal of Physics volume 60 1982 So successful was this meeting that the decision was taken to hold a second one around the time of XIII ICPEAC in Berlin in 1983 London was clearly a convenient location but rather than the obvious choice of University College London in central London the Organising Committee decided that the beautiful and peaceful surroundings of Royal Holloway College would provide a more pleasant and intimate atmosphere for a small meeting Even a small conference requires substantial sums of money to pay the expenses of invited speakers and when considering possible sources of funds the Organising Committee recognised that the intended format of the meeting and the international composition of the participants made it appropriate to apply to the NATO Science Committee for support under the Advanced Research Workshop Programme This was one of the few successful applications made this year and so it was that the conference became the NATO Advanced Research Workshop on Positron Scattering in Gases The Workshop with approximately sixty participants started after lunch on 19 July 1983 and finished at mid day on 23 July Positron And Positronium Chemistry - Proceedings Of The Third International Workshop Jerry Y C Jean, 1990-11-27 This workshop on the subject of positron and positronium chemistry is the third international conference after those in Blacksburg Virginia 1979 and in Arlington Texas 1986 The fields of interests are interdisciplinary such as radiation chemistry superconductivity polymer chemistry biochemistry quantum chemistry and nuclear chemistry *Advances in Atomic, Molecular, and Optical Physics*, 1990-01-23 Advances in Atomic Molecular and Optical Physics Quantum Electrodynamics and Quantum Optics A. O. Barut, 2013-11-11 The borderline of quantum electrodynamics and quantum optics offer spectacular results and problems concerning the foundations of radiation theory Perhaps the major new viewpoint that has emerged from recent investigations is that one can now work inside a time dependent quantum process whereas up to now all elementary quantum processes were either stationary or one worked with asymptotic in and out states i e an S matrix approach In the first part of this volume the Quantum Electrodynamics the present status of the main approaches to this most accurate of all physical theories are discussed the Hamiltonian approach the Green's function approach with particular emphasis to bound state problems and the newer nonperturbative approach The latest numerical results on radiative corrections Lamb shifts and anomalous magnetic moments are reviewed with new results for high Z atoms Also discussed are different theoretical interpretations of the radiative phenomena as due to quantized field vacuum fluctuations or due to self energy A small group of contributions are devoted to the physics and mathematical description of decaying or unstable states in quantum theory This remarkable phenomenon of quantum theory still needs complete clarification it is a time dependent phenomenon which can be described also by asymptotic S matrix

methods but with complex energies Polarons and Excitons in Polar Semiconductors and Ionic Crystals J.T. Devreese, F. Peeters, 2013-06-29 The 1982 Antwerp Advanced Study Institute on Physics of Polarons and Excitons in Polar Semiconductors and Ionic Crystals took place from July 26 till August 5 at the Conference Center Priorij Corsen donk a restored monastery close to the city of Antwerp It was the seventh Institute in our series which started in 1971 This Advanced Study Institute which was held fifty years after Landau introduced the polaron concept can be considered as the third major international symposium devoted to the physics of polarons The first such symposium took place in St Andrews in 1962 under the title Polarons and Excitons I The early theoretical developments related to polarons were reviewed in depth at this meeting the derivation of the polaron hamiltonian by Frohlich the Frohlich weak coupling theory and the equivalent weak coupling canonical transformations the Landau Pekar and Bogolubov strong coupling theory and the Feynman polaron model formulated with his path integrals The main emphasis was on the polaron self energy effective mass and mobility From the experimental side the first evidence for polaron effects was provided by the pioneering cyclotron and mobility measurements on the silver halides by F e Brown and his group Also the significance of polaron effects for the understanding of excitons in ionic crystals was a central topic in St Andrews The second Advanced Study Institute concerning polaron physics was organized at the University of Antwerp R U C A Monopole '83 James L. Stone, 2012-12-06 Ten years have passed since It Hooft and Polyakov demonstrated that superheavy magnetic monopoles were a natural consequence of any Grand Unified Theory GUT in which the unifying group contains a $U(1)$ factor as a subgroup An analysis of these GUTs in an expanding cooling universe yields a phase transition at an energy 10^{15} GeV and at a cosmic time 10^{-35} seconds after the big bang The general consequences of GUTs and this phase transition are the prediction of proton decay the production of superheavy magnetic monopoles and an understanding of the observed excess of matter over anti matter in the universe Attempts to provide experimental verification of GUTs has led to valiant experimental efforts in recent years to observe nucleon decay in massive underground detectors Experiments to search for superheavy monopoles may eventually require similar efforts Since the unification scale is unreachable in the laboratory monopole detectors must search for relics of the big bang Much theoretical groundwork has been accomplished in recent years with the development of GUTs In Part I of this book Erick Weinberg gives a theoretical overview of the role of magnetic monopoles in the various unification schemes Monopoles in the context of the newly revived Kaluza Klein theories are presented by several authors and are summarized by Qaisar Shafi Mike Turner begins Part II with a discussion of monopoles in standard big bang cosmology Paul Steinhardt follows with his perspectives on the inflationary universe C Percolation, Localization, and Superconductivity Allen Goldman, 2013-11-22 The study of the effects of dimensionality and disorder on phase transitions electronic transport and superconductivity has become an important field of research in condensed matter physics These effects are both classical and quantum mechanical in nature and are observed universally in ureal materials What may at first glance seem a diverse collection of lectures

which form the chapters of these proceedings is in fact an attempt to demonstrate the commonality inter relationship and general applicability of the phenomena of localization percolation and macroscopic quantum effects on electrical transport and superconductivity in disordered solids The theory of these phenomena is presented in a complete yet self contained fashion and the inter relationship between the topics is emphasized An extensive treatment of experimental results is also included both those which have stimulated the theory as well as those that have confirmed it Many of the phenomena investigated in this field also have technological significance For example the nature of electronic localization in metals in which one or more dimensions are constrained is very important when one attempts to predict the behavior of the metallic interconnects in ultra miniature circuits
