Strahan's Mammals of Australia Andrew M. Baker,2023-11-23 Fully updated and with completely reworked text and images this is the Fourth Edition of the acclaimed The Mammals of Australia Strahan s Mammals of Australia is the best book available on the subject being the most definitive comprehensive and up to date It provides a written account of every species of native mammal known to have existed in Australia since European settlement with 403 species covered in total It is beautifully illustrated with more than 1 500 colour photographs while each species account includes a detailed description of the animal and its behaviour Species covered range from marsupials monotremes and rodents through to bats seals and whales The new edition sees the addition of 14 newly described species and includes all the latest taxonomic treatments and many changes to names common and scientific and other features that have been accepted in the 14 years that have passed since the publication of the Third Edition

**Tree Hollows and Wildlife Conservation in Australia** Philip Gibbons,David Lindenmayer,2002-04-05 More than 300 species of Australian native animals mammals birds reptiles and amphibians use tree hollows but there has never been a complete inventory of them Many of these species are threatened or are in decline because of land use practices such as grazing timber production and firewood collection All forest management agencies in Australia attempt to reduce the impact

of logging on hollow dependent fauna but the nature of our eucalypt forests presents a considerable challenge In some cases tree hollows suitable for vertebrate fauna may take up to 250 years to develop which makes recruiting and perpetuating this resource very difficult within the typical cycle of human induced disturbance regimes *Tree Hollows and Wildlife Conservation in Australia* is the first comprehensive account of the hollow dependent fauna of Australia and introduces a considerable amount of new data on this subject It not only presents a review and analysis of the literature but also provides practical approaches for land management

**Medicine of Australian Mammals** Larry Vogelnest, Rupert Woods, 2008-08-18 In *Medicine of Australian Mammals* more than 30 experts present the most current information available on the medical management of all taxa of Australian native mammals This comprehensive text is divided into two parts The first includes chapters on general topics relevant to the medical management of captive and free ranging Australian native mammals such as veterinary considerations for the rescue treatment rehabilitation and release of wildlife veterinary aspects of hand rearing orphaned marsupials marine mammal strandings and the role of the veterinarian and wildlife health investigation and necropsy of Australian mammals The second part covers the medicine of specific taxa of Australian native mammals Detailed information on taxonomy distribution biology anatomy physiology reproduction husbandry nutrition physical and chemical restraint clinical pathology hand rearing diseases zoonoses therapeutics reproductive management and surgery is included This practical one source reference is complemented by detailed photographs and illustrations as well as tables listing reproductive and physiological data diets haematology and biochemistry values and drug formularies Appendices include a checklist of the mammals of Australia and its territories and a guide to the identification of common parasites of Australian mammals *Medicine of Australian Mammals* is clinically oriented and is a must have for veterinary clinicians no matter how experienced The book will also be of use to veterinary students researchers biologists zoologists wildlife carers and other wildlife professionals

*Gliders of Australia* David Lindenmayer, 2002 This book deals with all six species of Australian gliders which range in size from the tiny 12 gram Feathertail Glider to the 1.3 kg Greater Glider It relates the story of this extraordinary group of animals which possess a fascinating array of adaptations to their nocturnal and gliding existence

*Comparative Physiology of the Vertebrate Digestive System* C. Edward Stevens, Ian D. Hume, 2004-11-25 This book discusses the structural and functional characteristics of the digestive system and how these vary among vertebrates

*Australian High Country Owls* Jerry Olsen, 2011 This book presents descriptions anecdotes and conservation issues referring to Australia's major owl species

**Forest Pattern and Ecological Process** David Lindenmayer, 2009 *Forest Pattern and Ecological Process* is a major synthesis of 25 years of intensive research about the montane ash forests of Victoria which support the world's tallest flowering plants and several of Australia's most high profile threatened and endangered species It draws together major insights based on over 170 published scientific papers and books offering a previously unrecognised set of perspectives of how forests function The book combines key strands of research on wildfires

biodiversity conservation logging conservation management climate change and basic forest ecology and management It is divided into seven sections introduction and background forest cover and the composition of the forest the structure of the forest animal occurrence disturbance regimes forest management and overview and future directions Illustrated with more than 200 photographs and line drawings Forest Pattern and Ecological Process is an essential reference for forest researchers resource managers conservation and wildlife biologists ornithologists and mammalogists and policy makers as well as general readers with interests in wildlife and forests Features The extent of synthesis at a range of key levels The depth of new perspectives on forest processes and ecological patterns in one of the world s truly great forests the montane ash forests The breadth of past and very current research that is both pure and applied The range of key topics and how they are inter twined wildfires biodiversity conservation logging conservation management climate change and basic forest ecology and management

The Complete Guide to Finding the Mammals of Australia David Andrew, 2015-12 Australia has a rich and unique array of animals including the largest diversity of marsupials on earth The recent growth in ecotourism has increased the popularity of mammal spotting particularly whale and dolphin watching but also spotting of perennial tourist favourites such as koalas and kangaroos Birdwatchers have for many years known of sites where special or difficult to see species may be reliably located However despite their comparative abundance and spectacular diversity many of Australia s unique mammals remain under appreciated because there has been little available information on where to see them until now For the first time ever The Complete Guide to Finding the Mammals of Australia advises interested amateurs and professionals where to locate many of Australia s mammals The book describes Australia s best mammal watching sites state by state It also includes a complete annotated taxonomic list with hints on finding each species or why it won t be easy to see sections on travel and logistics in Australia and appendices with hints on finding and photographing mammals This book will be of interest to anyone wanting to observe or photograph Australian mammals in the wild mammal enthusiasts biological field workers and volunteers tourists and ecotourists

The Common Worlds of Children and Animals Affrica Taylor, Veronica Pacini-Ketchabaw, 2018-10-08 The lives and futures of children and animals are linked to environmental challenges associated with the Anthropocene and the acceleration of human caused extinctions This book sparks a fascinating interdisciplinary conversation about child animal relations calling for a radical shift in how we understand our relationship with other animals and our place in the world It addresses issues of interspecies and intergenerational environmental justice through examining the entanglement of children s and animal s lives and common worlds It explores everyday encounters and unfolding relations between children and urban wildlife Inspired by feminist environmental philosophies and indigenous cosmologies the book poses a new relational ethics based upon the small achievements of child animal interactions It also provides an analysis of animal narratives in children s popular culture It traces the geo historical trajectories and convergences of these narratives and of the lives of children and animals in settler colonised lands This

innovative book brings together the fields of more than human geography childhood studies multispecies studies and the environmental humanities It will be of interest to students and scholars who are reconsidering the ethics of child animal relations from a fresh perspective     *Marsupial Biology* Norman Saunders,Lyn Hinds,1997 Marsupial Biology developed from contributions commissioned from those attending an international symposium held in honour of Hugh Tyndale Biscoe Australia s most celebrated marsupial biology authority and co author of the previous leading marsupial biology text published more than 15 years ago The book does not comprise papers of narrow focus read at the symposium but chapters reviewing the knowledge in each key area written to a book format It has been tightly edited to ensure a great degree of harmony and is suitable as a comprehensive reference text for graduate and undergraduate students     **Gliding Mammals of the World** Stephen Matthew Jackson,2012 This book provides a synthesis of all that is known about the biology of gliding mammals It includes a brief description of each species together with a map and a full colour painting It outlines the origins and biogeography of each group of gliding mammals and examines the incredible physical adaptations     **American and Australasian Marsupials** Nilton C. Cáceres,Christopher R. Dickman,2023-06-30 This book focuses on the evolution biogeography systematics taxonomy and ecology of New World and Australasian marsupials greatly expanding the current knowledge base There are roughly 140 species of New World marsupials of which the opossum is the best known Thanks to recent research there is now an increasing amount of understanding about their evolution biogeography systematics ecology and conservation in the Americas especially in South America There are also some 270 marsupial species in the Australasian region many of which have been subject to research only in recent years Based on this information and the authors extensive research this book provides comprehensive insights into the world s marsupials It will appeal to academics and specialized researchers students of zoology paleontology evolutionary biology ecology physiology and conservation as well as interested non experts     Walker's Marsupials of the World Ronald M. Nowak,2005-09-12 Authoritative and engaging this volume from the Walker s Mammals series focuses on marsupials pouched animals whose unusual method of reproduction between egg laying and placental birth places them in a unique category among mammals A comprehensive guide to the biology and distribution of marsupials this book includes common and scientific names size and physical traits habitat and ecology behavior and social interactions reproduction life span and conservation The text is coupled with illustrations from the collections of leading photographers and the world s greatest museums An introduction by marsupial expert Christopher R Dickman describes the evolution and current status of marsupials and reveals why they add so much intrigue to the natural world     Linkages in the Landscape Andrew F. Bennett,1999 The loss and fragmentation of natural habitats is one of the major issues in wildlife management and conservation Habitat corridors are sometimes proposed as an important element within a conservation strategy This book offers examples of corridors both as pathways and as habitats in their own right It includes detailed reviews of principles relevant to the design and management of corridors their place in regional approaches

to conservation planning and recommendations for research and management
