

IGB ACCIDENT/INCIDENT REPORTING AND INVESTIGATION PLAN

Accident/Incident Reporting

It is necessary to report every accident to your supervisor and the IGB Safety Coordinator in order to learn the cause and adopt proper methods to prevent any similar accident. The IGB Safety Department requires that all employees follow the established accident reporting procedures as follows:

Employees will report all accidents, injuries, near misses and property damage immediately to their supervisor or lab manager.

The supervisor/lab manager, upon report of an accident, will immediately administer appropriate first aid or ensure employee(s) receives the necessary medical attention.

If an ambulance (911) is called, The supervisor for the area of the incident and/or the shipping and receiving personnel will notify the Gatehouse Receptionist that emergency forces are responding to the IGB. The Gatehouse receptionist will notify IGB Facilities and Services of the incident so IGB staff can assist in the response to the incident.

The supervisor/lab manager will secure the area and/or equipment involved in the accident is properly secured and assist the employee in filling out the first report of injury/incident.

A copy of the injury/incident report will be forwarded to the IGB safety coordinator. If an injury occurred, a copy **MUST** be forwarded to the UIC office of claims management within 24 hours. **Payment for claims and /or medical bills could be delayed or denied if the report is not sent to claims management!** Below is a link to the first report of injury form.

Investigation

Accidents should be investigated as soon as possible after their occurrence (except when it delays medical treatment or the person involved is distraught). The longer the period of delay in the investigation, the more likely is the chance of witnesses not remembering the facts of the accident. Normally, the immediate supervisor should be the one to do the initial investigation because of his or her knowledge of the employees, equipment, and work practices in the area. There are five main methods of gathering accident information: (1) interviewing the accident victim, (2) interviewing accident witnesses, (3) investigation of the accident scene, (4) re-enactment of the accident, and (5) reconstruction of the accident.
