Postharvest Physiology, Handling, and Utilization of Tropical and Subtropical Fruits and Vegetables Er B.

Pantastico,1975 Postharvest physiology Regulation of ripening and senescence Harvest and handling Physiological disorders and diseases Distribution and utilization Postharvest Physiology of Perishable Plant Products Stanley Kays,1991-05-09

This book provides a thorough overview of how plants and live plant products respond after harvest It covers the postharvests physiology of perishable crops including food crops such as grains fruits vegetables and nuts as well as floral ornamental and turf crops **Post-Harvest Physiology and Crop Preservation** Morris Lieberman,2012-12-06 Emphasis in agricultural research for many years has concentrated on crop production This emphasis has become more important in recent years with the realization that the population worldwide is outstripping the food supply There is however another side to increasing the availability of the food supply This simply involves preservation of the harvested crop for human consumption The losses incurred in harvesting handling transportation storage and marketing crops have become a greater problem as the distance from the farm to the ultimate consumer increases In the Western world where modern transportation storage facilities and marketing technology are widely used post harvest technology requires a large input of energy which increases costs considerably Therefore losses are more significant and the ability to provide fresh fruits and vegetables out of season at reasonable costs will depend on reduced post harvest losses throughout the marketing chain from the farm gate to the ultimate consumer The reduction in post harvest losses depends on proper use of current technology and further developments derived from a broad spectrum of scientific disciplines Biochemistry plant physiology plant pathology horticulture agronomy physics engineering and agricultural economics all provide knowledge which has been useful and will be useful in the future for improving post harvest technology and crop preservation This volume records the Proceedings of the NATO Advanced Study Institute on Post Harvest Physiology and Crop Preservation held at Sounion Greece April 28 May 8 1981 **Postharvest Ripening Physiology of Crops** Sunil Pareek,2016-02-22 Postharvest Ripening Physiology of Crops

is a comprehensive interdisciplinary reference source for the various aspects of fruit ripening and postharvest behavior It focuses on the postharvest physiology biochemistry and molecular biology of ripening and provides an overview of fruits and vegetables including chapters on the postharvest quality **Post-harvest Physiology of Food Crops** William Glynn

Herbs, and Flowers Diane M. Beckles, Adel Kader, Michael S. Reid, Cai-Zhong Jiang, Marita I. Cantwell, 2025-01-24 Fresh fruit vegetables and ornamentals are composed of living tissues that experience continuous change after harvest Some of these changes are desirable e g development of sugars and improved texture during fruit ripening while others are not e g discoloration and loss of nutrients in fresh cut vegetables Senescence is the final stage in the development of plant organs culminating in a series of irreversible events leading to cellular breakdown and death These postharvest changes cannot be stopped but they can be managed to maintain optimal quality longer Maintaining recommended temperature and relative humidity while minimizing wounding and microbial contamination constitute the foundation of effective postharvest handling The first chapter of this volume describes biological factors affecting these crops including respiration rates of ethylene production water loss physical damage and damage due to pathogens environmental factors such as temperature humidity ethylene and sunlight Subsequent chapters explore the use of biotechnology to improve postharvest results and postharvest handling operations for ornamentals and cut flowers for fresh herbs for fruit vegetables e g cucurbits tomatoes for leafy and stem vegetables and for underground vegetables roots tubers bulbs Handy easy to use tables and charts along with color photographs illustrate important points throughout A comprehensive table summarizes storage recommendations for produce a second table summarizes storage recommendations for cut flowers and greens This is Volume 7 in *Postharvest Technology of Horticultural Crops 4th Edition*

Handbook of Vegetable Preservation and Processing Y. H. Hui, Sue Ghazala, Dee M. Graham, K.D. Murrell, Wai-Kit Nip, 2003-09-12 Representing the vanguard in the field with research from more than 35 international experts spanning governmental industrial and academic sectors the *Handbook of Vegetable Preservation and Processing* compiles the latest science and technology in the processing and preservation of vegetables and vegetable products This reference serves as the only guide to compile key tools used in the United States to safeguard and protect the quality of fresh and processed vegetables A vast and contemporary source it considers recent issues in vegetable processing safety such as modified atmosphere packaging macroanalytical methods and new technologies in microbial inactivation

Crop Post-Harvest: Science and Technology, Volume 3 Debbie Rees, Graham Farrell, John Orchard, 2012-01-30 International trade in high value perishables has grown enormously in the past few decades In the developed world consumers now expect to be able to eat perishable produce from all parts of the world and in most cases throughout the year Perishable plant products are however susceptible to physical damage and often have a potential storage life of only a few days Given their key importance in the world economy *Crop Post Harvest Science and Technology Perishables* devotes itself to perishable produce providing current and comprehensive knowledge on all the key factors affecting post harvest quality of fruits and vegetables This volume focuses explicitly on the effects and causes of deterioration as well as the many techniques and practices implemented to maintain quality though correct handling and storage As highlighted throughout regular losses caused by post harvest spoilage of perishable products can be as much as 50% A

complete understanding as provided by this excellent volume is therefore vital in helping to reduce these losses by a significant percentage. Compiled by members of the world renowned Natural Resources Institute at the United Kingdom University of Greenwich with contributions from experts around the world, this volume is an essential reference for all those working in the area. Researchers and upper level students in food science, food technology, post harvest science and technology, crop protection, applied biology and plant and agricultural sciences will benefit from this landmark publication. Libraries in all research establishments and universities where these subjects are studied and taught should ensure that they have several copies for their shelves.

Post Harvest Technology of Horticultural Crops K. P. Sudheer, V. Indira, 2007

The book post harvest technology assumes great attention during recent years since preservation of agricultural produce is a basic necessity to sustain agricultural production. It helps to add value of produce thus having great scope for employment generation at the production catchments. In this book, the authors have attempted to consolidate different methods of post harvest technology of fruits and vegetables focusing on recent advances. This book will benefit both practicing food technologists, post harvest technologists who are searching for answers to critical technical questions of post harvest technology. Further, it will be useful to agricultural engineers, food processors, food scientist researchers and progressive farmers and to those who are working in relevant fields. It is intended to fill a gap in presently available post harvest technology literature.

Post-Harvest Diseases and Disorders of Fruits and Vegetables Anna L. Snowden, 2008-02-14

Now established worldwide as the standard guide to the recognition and understanding of the causes of deterioration in temperate and tropical fruits and vegetables, these two superbly illustrated full colour volumes deal clearly, concisely and systematically with each of the main diseases and disorders, emphasising those of importance to international growers.

Sustainable Postharvest Technologies for Fruits and Vegetables Sajid Ali, Shabir Ahmad Mir, B.N. Dar, Shaghef Ejaz, 2024-08-30

Fruits and vegetables, commonly termed as fresh produce, are an important component of the human diet as these provide various beneficial and essential health related compounds. Nevertheless, fresh produce is susceptible to postharvest deterioration and decay along with loss of certain nutrients due to inappropriate storage conditions and lack of standard postharvest technologies. In addition, the short shelf life is considered another major constraint that must be extended after harvest to ensure a wider availability window of the fresh produce for consumers. From this perspective, the use of postharvest approaches is considered imperative to reduce the deterioration of harvested fresh produce in order to extend their storage and shelf life potential on a sustainable basis. Sustainable Postharvest Technologies for Fruits and Vegetables covers various aspects of postharvest technologies with major developments over the recent past and provides a way forward for the future. The sustainable use of various technologies and elicitors could be adapted from farm to fork in order to conserve the eating quality of fresh produce. Therefore, this book covers various sustainable postharvest treatments and technologies that could be considered highly effective for the delay of postharvest senescence and deterioration. Among the

various technologies the use of preharvest treatments controlled atmosphere dynamic control atmosphere modified atmosphere and hypobaric conditions has tremendous potential for the fresh fruits and vegetables industry In the same way cold plasma pulsed light ultraviolet light ultrasound technology nanoemulsions nano packaging electrolyzed water high pressure processing ozone gas irradiations edible coatings vacuum packaging and active packaging with slow releasing compounds along with nanotechnology are highly practicable and possesses tremendous potential to be used in the maintenance of overall eating quality and storage life extension of the fresh produce Key Features Overviews the major factors affecting postharvest physiology and shelf life potential of fresh produce Focuses on major sustainable technologies having the potential to maintain postharvest quality and extend shelf life of fruits and vegetables Describes practical and recent advances of various approaches indispensable for the maintenance of overall eating quality and food safety attainment for fresh produce on a sustainable basis Covers how quality maintenance and shelf life rely on preharvest practices nonthermal treatments storage atmospheres packaging materials active packaging edible packaging coating application techniques nanotechnology and ecofriendly plant extracts and natural antagonists

Postharvest Physiology and Biochemistry of Fruits and Vegetables Elhadi M. Yahia, Armando Carrillo-Lopez, 2018-10-31 Postharvest Physiology and Biochemistry of Fruits and Vegetables presents an updated interrelated and sequenced view of the contribution of fruits and vegetables on human health their aspects of plant metabolism physical and chemical compositional changes during the entire fruit development lifecycle the physiological disorders and biochemical effects of modified controlled atmospheres and the biotechnology of horticultural crops The book is written specifically for those interested in preharvest and postharvest crop science and the impact of physiological and biochemical changes on their roles as functional foods Deals with the developmental aspects of the lifecycle in whole fruits Describes issues such as the morphology and anatomy of fruits beginning with the structural organization of the whole plant and explaining the fruit structure and its botanical classification Addresses biotechnological concepts that control firmness quality and the nutritional value of fruits

Control Applications in Post-Harvest and Processing Technology 1995 J. De Baerdemaeker, J. Vandewalle, 2016-01-22 The 1st IFAC CIGR EURAENG ISHS Workshop on Control Applications in Post Harvest and Processing Technology CAPPT 95 provides the opportunity to discuss and evaluate the state of the art and application of control methods in storage and processes of agricultural and horticultural products This publication generated from the papers at the workshop provides a detailed assessment of present and future developments of key technologies within the agricultural and horticultural fields

Postharvest Physiology and Pathology of Vegetables Jerry A. Bartz, Jeffrey K. Brecht, 2002-12-04 Focusing exclusively on postharvest vegetable studies this book covers advances in biochemistry plant physiology and molecular physiology to maximize vegetable quality The book reviews the principles of harvest and storage factors affecting postharvest physiology calcium nutrition and irrigation control product quality changes during handling and storage technologies to improve quality

spoilage factors and biocontrol methods and storage characteristics of produce by category It covers changes in sensory quality such as color texture and flavor after harvest and how biotechnology is being used to improve postharvest quality
