## **Post Transcriptional Control Of Gene Expression:**

Post-Transcriptional Control of Gene Expression in Plants Witold Filipowicz, Thomas Hohn, 2012-12-06 A recent volume of this series Signals and Signal Transduction Pathways in Plants K Palme ed Plant Molecular Biology 26 1237 1679 described the relay races by which signals are transported in plants from the sites of stimuli to the gene expression machinery of the cell Part of this machinery the transcription apparatus has been well studied in the last two decades and many important mechanisms controlling gene expression at the transcriptional level have been elucidated However control of gene expression is by no means complete once the RNA has been produced Important regulatory devices determine the maturation and usage of mRNA and the fate of its translation product Post transcriptional regulation is especially important for generating a fast response to environmental and intracellular signals This book summarizes recent progress in the area of post transcriptional regulation of gene expression in plants 18 chapters of the book address problems of RNA processing and stability regulation of translation protein folding and degradation as well as intracellular and cell to cell transport of proteins and nucleic acids Several chapters are devoted to the processes taking place in plant organelles Post-transcriptional Control of Gene Expression Orna Resnekov, Alexander von Gabain, 2013-06-29 Many important cellular processes rely on posttranscriptional control of gene expression This book describes the mechanisms of gene expression at this level that occur in the cytoplasm of prokaryotes and eukaryotes Several introductory chapters discuss the general principles of translation and mRNA stability The interactions of mature mRNA with the translational machinery the components of mRNA degradation and antisense RNA are surveyed Subsequent chapters discuss protein folding transport modification and degradation The book is an invaluable source of information for both newcomers and those wishing an overview of the field

*Post-transcriptional Control of Gene Expression*, 2003 **Post-Transcriptional Control of Gene Expression** John E.G. McCarthy, Mick F. Tuite, 2013-06-29 The last ten years have witnessed a remarkable increase in our awareness of the importance of events subsequent to transcriptional initiation in terms of the regulation and control of gene expression In particular the development of recombinant DNA techniques that began in the 1970s provided powerful new tools with which to study the molecular basis of control and regulation at all levels The resulting investigations revealed a diversity of post transcriptional mechanisms in both prokaryotes and eukaryotes Scientists working on translation mRNA stability transcriptional anti termination or other aspects of gene expression will often have met at specialist meetings for their own research area However only rarely do workers in different areas of post transcriptional control regulation have the opportunity to meet under one roof We therefore thought it was time to bring together leading representatives of most of the relevant areas in a small workshop intended to encourage interaction across the usual borders of research both in terms of the processes studied and with respect to the evolutionary division prokaryotes eukaryotes Given the breadth of topics covered and the restrictions in size imposed by the NATO workshop format it was an extraordinarily difficult task to choose

the participants However we regarded this first attempt as an experiment on a small scale intended to explore the possibilities of a meeting of this kind Judging by the response of the participants during and after the workshop the effort had been worthwhile

Post-transcriptional Control of Gene Expression Celine Sin,2016 Gene expression describes the process of making functional gene products e g proteins or special RNAs from instructions encoded in the genetic information e g DNA This process is heavily regulated allowing cells to produce the appropriate gene products necessary for cell survival adapting production as necessary for different cell environments Gene expression is subject to regulation at several levels including transcription mRNA degradation translation and protein degradation When intact this system maintains cell homeostasis keeping the cell alive and adaptable to different environments Malfunction in the system can result in disease states and cell death In this dissertation we explore several aspects of gene expression control by analyzing data from biological experiments Most of the work following uses a common mathematical model framework based on Markov chain models to test hypotheses predict system dynamics or elucidate network topology Our work lies in the intersection between mathematics and biology

**Transcriptional and Post-transcriptional Regulation of Gene Expression** Jun Ding, 2016 Regulation of gene expression includes a variety of mechanisms to increase or decrease specific gene products Gene expression can be regulated at any stage from transcription to post transcription and it is essential to almost all living organisms as it increases the versatility and adaptability by allowing the cell to express the needed proteins In this dissertation we comprehensively studied the gene regulation from both transcriptional and post transcriptional points of view Transcriptional regulation is by which cells regulate the transcription from DNA to RNA thereby directing gene activity Transcriptional factors TFs play a very important role in transcriptional regulation and they are proteins that bind to specific DNA sequences regulatory elements to regulate the gene expression Current studies on TF binding are still very limited and thus it leaves much to be improved on understanding the TF binding mechanism To fill this gap we proposed a variety of computational methods for predicting TF binding elements which have been proved to be more efficient and accurate compared with other existing tools such as DREME and RSAT peaks motif On the other hand studying only the transcriptional gene regulation is not enough for a comprehensive understanding Therefore we also studied the gene regulation at the post transcriptional level MicroRNAs miRNAs are believed to post transcriptionally regulate the expression of thousands of target mRNAs yet the miRNA binding mechanism is still not well understood In this dissertation we explored both the traditional and novel features of miRNA binding and proposed several computational models for miRNA target prediction The developed tools outperformed the traditional microRNA target prediction methods e.g. miRanda and TargetScan in terms of prediction accuracy precision recall and time efficiency
